All Fast Food chains that use headsets have the capability
of using their internal comms. This is accomplished by
using various CTCSS PL Tones (example: a PL tone of 77 Hz
for outside comms and 162.2 Hz for internal comms).

You may have been there at a very slow time. They generally
use their internal comms when a customer places a special
order.

A current list of Fast Food frequencies can be found at the
following URL http://pages.prodigy.net/hounddog/fastfood.txt

An article on Fast Food monitoring appeared in the August 96
issue of Monitoring Times. It can be view online at the
following URL: http://www.grove.net/fastfreq.txt

I've found a 2006 for a very fair price from a very fair guy. I appreciate all the offers though, except for a certain person who posted here for help on a ZAPPED 2006, for a ridiculous price (via M.O. only) didn't mention it was ZAPPED and when I asked if it was the one I never got a reply so I can only assume. Thanx for all your help.

Happy Scanning D.B.

Hey team, me again!

Well for the most part I've received plenty of good responses to my initial posting regarding the crap service I've received at Ham Radio Outlet. I was surprised to find there were a lot of people who are quite happy with the service and think I should give them another try. I don't see this happening, not without a huge sale going on or something. I still think they're service is poor. I don't walk in with a chip or bad attitude. I intend to get the most for my $900 dollars, that's what I spend the last time I spent money there. I wanted to make an informed purchase and found the sales people to be totally useless. I had to get some marketing material on the three radios I was considering and come back once I made up my mind. I don't think the sales people even bother to read the lit they have in their own store. I knew more about the radios than they did after I did my homework. I want to ask questions and get answers. If that is an attitude problem, I have one.

Ok, I'm off the soapbox now. Thanks for your time..

1867. Icom R-10 Cloning and CI-V pinouts

Newsgroup: rec.radio.scanner
Date: 1997-05-22 00:00:00 UTC
From: baptpdc@netcom.com
Message-ID: <3383e0bd.38974391@news.flash.net>
Source record: 197009

CI-V Hacking the R-10

PC Cloning:
Icom's OPC-478 "PC cloning cable" is nothing more than a CI-V
level converter with different pinouts.
The CSR-10 Cloning software has encrypted data files, but the
data that is streamed to and from the radio during cloning operations
seems to be standard CI-V formatted data.

1) OPC-478 functions with CI-V software if plugged into the
speaker jack.
2) OPC-478 does not function when plugged into the CI-V jack.
3) Cloning is possible with the OPC-478 plugged into the CI-V jack
if the pins are swapped.
4) Cloning is possible with a standard CI-V level converter into
the CI-V port on the R-10.
5) Cloning can take place on the speaker jack with a standard CI-V
level converter and a pin adaptor.

Reason: Icom swapped the pinouts on their stereo plugs.

Jack Pinouts:

Speaker:

Tip: AF out
Center: CI-V data
Ring: Ground

CI-V:

Tip: CI-V Data
Center: ?
Ring: Ground

Software control:

1) CI-V connector works with a mono connector, but is stereo
inside the R-10.
2) Standard CI-V level converter functions with CI-V software if
plugged into the CI-V jack. (normal operation)
3) Standard CI-V level converter functions with CI-V software if
pins are swapped and plugged into the speaker jack.
4) OPC-478 functions in the CI-V jack if pins are swapped.

Things left to figure out by myself or anyone else who cares:

1) Decode a dump of the cloning codes.
From a dump I made via RS-232 tap, the clone codes seem to be
CI-V codes with 2 frames at the begining of the cloning operation
and a final frame with "Icom Inc." at the end.
2) Memory writes take place when the radio is in "clone mode". Is
there a way to write memories without the (PWR)(V/M) sequence?
Is there a way to set the radio into "clone mode" via software?
Icom claims there is no way to do this.

What is the point in declaring the "speaker jack" as the cloning port,
requiring redundant hardware to buy when it can all be done from the
existing CI-V port??? Hell, it's not even DIFFERENT hardware. Swap a
couple of pins and make an extra $65. And to top it off, all of that
expensive hardware fits into a DB-9 hood!

What is the reasoning behind only allowing memory writes when the
receiver is in "clone mode". Talk about stupidity. It seems like
they crippled it on purpose just to sell those stupid cloning cables.

I should also say that the Icom America tech I talked to thought it
was pretty lame also and that they were against this stupidity, but
Japan did it anyway.

State security and community security are two different things. State
security is enhanced by secrecy. Community security at the police
beat level is enhanced by communication and total integration.
Military security is an arm of national security and answers to the
state. Police security is an arm of community security and answers to
to civilian citizens. And you're right: Police departments thinking
like the CIA is a big problem and one I protest. Community policing
(which BTW I don't necessarily agree with on all points as implemented
either) is an example of how police are waking up to this realization.
Although I have reservations about the community policing approach, I
do see open broadcasting as an enhancing component of community
policing.

That's a pretty strange statement about an antenna. Antennas that only work for transmitting?? They need a new technical writer, that antenna is marketed to be used with VHF/UHF ham equipment, which is definately NOT transmit-only..

I noticed that they don't even bother to mention the gain of their other Roof Mount scanner antenna in it's specifications, which is also probably unity. I wonder if there are ANY broad-band scanner antennas with even 3db gain?!

<Polite snip>

Well I for one already knew what you are saying and I have been making
that point to those who keep telling me that closed systems are good
because they'll keep information mongers from abusing privacy. Yes,
you can get most anything at the courthouse with varying degrees of
effort.

BUT, only the communication in real-time allows for any real community
benefit in terms of public safety. Only real-time tells me which
areas to avoid, what the fleeing suspect looks like (while I can still
peek out the window to see if he's hiding in my backyard which
HAPPENED here once!), and what the police don't have time to alter or
"lose". Also, live access empowers people too poor to track down
recorded information, or those otherwise deprived, to have access to
the same information that local media will certainly have, eliminating
mandatory dependence on corporate media instead of convenient
dependence.

>Conspiracy buffs are interesting. In this case, you can tell

1875. MDT, Mobitex, Trunker software question

Newsgroup: rec.radio.scanner
Date: 1997-05-22 00:00:00 UTC
From: Steve Sharp <sajsharp@together.net>
Message-ID: <33846764.4663@together.net>
Source record: 197017

Since the authors of the software that decodes, MDT, Mobitex, and
trunker made it so one can't send them mail, I thought I'd post this ans
see what kind of a response
I get.

Would the hamcomm type interface used for those three programs be able
to decode
ACARS too.

For those who don't know, ACARS is used by airlines to sent data between
the planes in flight and the ground.

From a few sites I've been to, ACARS is 2400 baud, odd, 7 bit, and
parity and
not encrypted.

From what I know about the protocols you can decode with the hamcomm
interface,
this should not be a problem.

I'm not much of a programmer, especially C. Maybe someone out there
could work on some code to decode this.

BTW, in the U.S. it can be received on 131.55 MHz.

Bullshit. The same "private" info has been broadcast over open police channels for decades. The fact that there are now MDTs did not create the information.

> To hear the idiot in front of you ordering a Whopper at McDonalds.

I guess he would be an idiot if he ordered a Whopper. Whoppers are from Burger King.

Actually, it's the same reason anyone listens to anything... it can be entertaining.

The headset mic is often continuously on, the person in the drive-through hears only when the employee sends audio to the speaker intentionally. You can hear conversations between the employees, often insulting observations about the customers, I personally heard two employees in Goodlettsville, Tennessee talking to each other about how much cash they had scammed from the registers, and how the boss thinks it was the (minority) that took it.

I heard a woman in a suburb of Pittsburgh telling another employee about how her boyfriend was responsible for the black eye and cut on her brow.

It ain't exactly monitoring Air Force One, but like anything else, some enjoy it, some don't. Some think that because THEY don't, anyone who does is automatically somehow below themselves on the cool scale.

I wouldn't plan a vacation around scanning McDonalds, but it can provide some entertainment and usually beats the local AM & FM broadcasts.

Why does anyone listen to anything? If a person finds it boring or useless, don't listen.

You may want to look into Bill Cheek`s new book, The Ultimate Scanner, in order to see the many things that can be done with this fine scanner, including monitoring trunked systems, 26,400 Channels, Attaching computer interfaces to it, and much, much more. If you get all three editions of his books, you will get some of the previous modifications that weren`t repeated in the third book. Your particular scanner has inherent capabilities, and is a really fine piece of equipment, but this tech info in the aforementioned books will really turn it into a SUPER machine. I am doing some of these mods to my 2005 this week. You may be interested to know that the 2035 is nothing but a 2005 with some of the capabilities removed ! Even so, it is hard to keep a good design down, and the 2035 will, for instance, scan the 800 mhz band, but needs a computer interface to do what came naturally to the 2005. The computer interface has many other advantages as well, so I wouldn`t call it a real drawback. The optoScan 535 is an excellent interface, and has many capabilities of its own. You will probably be delighted at future developments with the 2005. Enjoy!

Good Morning Anthony
First a salute for your service from an old Navy airman.

There are 20+ MARS WWW pages at URL:
http://www.dxer.com/mars.html

MARS = Military Affiliate Radio System

The 20+ pages should answer your questions and possibly contacts.

Regards
Rod in San Diego

...For immediate release... (no pun intended)

To all of you who pre-ordered UNIDEN TRUNKTRACKERS
from Advanced Digital Systems <http://www.advdig.com>
by yesterday (5/21/97) we are pleased to inform you that EVERYTHING HAS
SHIPPED TODAY ! We appreciate your business & patience.

How's that for service ?

Our next shipment (as in alot this time) will be in next Wednesday and
we will fill the backorders from today. We have plently of stock coming
in so if you are still looking using our on-line EMAIL order form, FAX
or CALL.

Happy Trunk-Tracking

Do you know how many FCC agents are in the US? Not very many. I worked for a police department once that had a school bus driver keying up and talking on a Sheriff repeater and it took the FCC 6 months to even do anything at all about the bus driver. I think maybe if the problems are so large that the fed should employee more agents. I guess they "don't have time".

It was demonstrated before the congressional subcommittee that the PRo26 could pick up full strength cellular images in the 360-385MHz range by shorting out pins 12 to 14 on IC1 on the underside of the RF board. Since the Pro26 happened to be "the" radio in their faces at the time, they chose to pick on that radio.

Steve, I post to these groups knowing full well that I'm enticing controversy. I am making an effort to address every single opposing viewpoint that others are kind enough to take the time and challenge me with. Some of these opposing viewpoints cannot be overcome because they are valid. In these notably rare cases I can only reiterate that the value is better than the cost. Hopefully I'm glossing over nothing, but if you see something I have not addressed here, please detail it. How, exactly, does the invention of "those small programmable scanning devices" make open broadcasting any less safer than it always has been, or any less beneficial than it always has been? You may very well have some new insight that I would like to see integrated with my position.

>supposed to be responsible for what goes out for the general public. I don't
>have a problem with routine business being conducted over a general broadcast
>frequency, but I do have a problem with some scanner-jockey wanting to be the
>one who decides what stuff goes where.

Luckily, scanner jockeys will not decide which stuff goes there. The only exception will be in cases where the scanner jockey in question also happens to be a key police administrator (and I believe I have one or two of those on my e-mail list).

Look, there will always be opinionated scannerists such as myself, but WE will never, ever, make the final decisions AS mere scanner jockeys. Here in Hillsborough County I plead my case in the media, on the internet, and with a few key officials via regular mail. After hearing me out, it was the command staff of the Hillsborough County Sheriff's office, with final consideration by Sheriff Cal Henderson, that made the decision to preserve public access to basic patrolcasts. Not me. If you are curious as the credentials of the HCSO and the Sheriff himself, you are free to check out their website where all of this is detailed. Check it out at

http://legal.firn.edu/sheriff/hillsborough/index.html

I also doubt that scannerists were allowed to decide the policy for Seattle's program, or Dallas's decision to broadcast police calls over

the internet. The same for Los Angeles police, and Greensboro police. To be sure, I would never feel comfortable making public safety decisions. I have a handful of classes in criminology from my college days, but these hardly qualify me to control such critical policies. As a scannerist I can preach the merits and benefits of scanning, but that's as far as it goes. Some police departments may appreciate my unique insight, others may not. After all, if your police decided to promote some form of open broadcasting, would you NOT want the input of scanner jockeys involved? Sure you would! These guys have been listening forever. They know exactly what makes open broadcasting so valuable, and they can provide useful insight as to the dangers of it as well. If I were police chief, I'd sure as hell make sure a scannerist were on the board at least. :)

Truth be known, I would be just as uncomfortable having a scanner jockey decide this issue, just as much as I would some Joe Doe off the street. No matter how I feel, or how you feel, it will come down to the people in charge to decide for themselves. Here and in other places, that decision benefits open broadcasting.

Dave

I am supposed to reap the benefits of those items (squad cars, guns, etc.)
in the form of reduced crime and social 'benefits' (ha!), closed
broadcasting is a completely different plane. The ability to monitor
police action keeps the police in check (well, in an ideal society where
people give a fuck about their rights).

It is a matter of fact and record that the Congress has a habit of routinely altering the written record of their activities. The Federal Register is an edited version of what really happened during floor debate. If you don't want to believe that, try watching C-SPAN for a while, then read the FR version of what you saw.

Excellent point and that's exactly what they've decided to do in
Seattle and here in Hillsborough County. I don't LIKE the idea of
having to fork out the $1600-$1700 for a new Ericsson police portable,
and I don't LIKE having to go to the police station to have them
program the unit for me (God only knows how they're planning on
stonewalling that operation), and I don't LIKE the fact that they will
be able to triangulate on me anytime they want for whatever weird
reason they might...BUT, it is a viable open broadcasting solution.
It's a STARTING point. Until this issue is really considered, I have
no problem in bearing the personal expense to keep on scanning the way
that I have been. If I see the value in open broadcasting, if I'm
willing to pay for it, then it's the -least- the HCSO can do to at
-least- make sure I can bear that expense legally. Prior to my
protest they would not have even allowed that--at least openly.
Tragically, however, there are probably those who DO see the economic
barrier of nearly two thousand bucks acting as a filter to keep the
public out of police communications. But then that's why I hope to
conquer bad attitudes.

Later I see the HCSO and other agencies opening up even more though.
I ultimately hope to see them simulcast over VHF/UHF nondigital
frequencies, over cable, over the internet, etc. I see them
integrating their communications into the lifestyles of civilians by
creating special "citizen bolo" talkgroups (which is at the proactive
end of the open broadcasting treatise)...even if the best they'll do
today is submit to selling these damn intrusive and expensive
receive-only portables.

It's a very fair compromise, even though I'd clearly like to see more.

Dave

I run a JIM M-100 Preamp with three different bandwidth switches on a ICOM
AH-7000
discone and PRO-2005 RG-213 cable. I use the preamp closest to the scanner so
to amplify the cable loss (this worked best for me). As with hearing aids so
do preamps amplify all signals. To counter this I use a 30-band home stereo
equalizer to help shut out unwanted freqs and let the talk freqs pass.

Hope this helps a little.

When police departments try and justify the extra costs involved in going digital, I would like to see them cough up statistics on how many criminals were caught with a scanner in their possession during the commission of a crime vs. the number of scanner listeners that help police.

Your point is well-acknowledged in the open broadcasting dialog. In fact I spend a lot of time telling people that police do NOT go to digital or trunked systems just to thwart scannerists (it was a local Ericsson administrator who seemed to believe this BTW, not me). But it is beside the point. It -does- inhibit casual public scanning and police do not value open broadcasting enough to compensate in some way. That plight for compensation is the objective. Here in Hillsborough County the solution adopted was simple: sell receive-only police portables to the public.

The open broadcasting movement seeks to change the attitude of police administrators. Candidly police DO enjoy knowing they are frustrating the public even if it's not the primary goal of going digital. Time and time again police are quoted in newspapers as saying that their new communications system will "make it hard to scan". Although increasing security is not the objective of going digital, it is valued and in fact, is a selling point of digital systems.

The question is not about secrecy and separation from the public, although, as the saying go, "it's in there"...it's about changing attitudes. What I am trying to do is get the police to acknowledge the value of open broadcasting, and then take the initiative in making sure police openly broadcast their patrolcasts. Whether they do this through public-purchase policies as in Hillsborough or Seattle, over the Internet as they do in Dallas, or as they do over cable TV as they do in Greensboro...what's important is that they DO it. Ideally, police should go door-to-door issuing receive-only police radios to the public. I don't think that's feasible, but it illustrates the point.

>about hiding from the public. MDTs and KDTs have provided digital
>computer communications between PSAPs and units for years without this hue
>and cry about not seeing what was on the MDT. And believe me some of the
>best stuff is on the MDTs. :-)

Agreed.

>In a few years there will be radios on the market that will receive the
>digital signal and all of the scanner buffs can go back to listening. Now

I don't agree with this. The digital systems will get better and
better and I DO believe those encryption keys will become the norm.
Unless police value the public listening in on their transmissions
from the get-go, I don't believe there will be any legal compensation
for the public.

One of the biggest misconceptions about the open broadcasting issue is
that it is about police scanners. Open broadcasting is NOT about
police scanners. Police scanners have very little to do with the open
broadcasting issue. The only reason police scanners enter the
conversation at all is because up until now they were the most
efficient and cost-effective tools for taking advantage of open
broadcasting. Also, scannerists are aware of the personal media value
scanners afford. But the new radio systems will demand proactive
measures to broadcast transmissions, which can only be done if police
adopt a positive attitude as they now claim to in Hillsborough County.

>if agencies were talking about encoding the digital signal that might be
>something to complain about but just getting new technology? Sheesh, get
>a life.

I get this "get a life" phrase a lot. People have to understand that
appreciating open broadcasting in no way implies that its an
entertainment fantasy-cop thing. It is for some, but being a cop is
fun for some cops. No, it's a *media* issue. If the government came
in and took away people's TV sets, or made TV signals only useable for
inter-government work, people would be outraged. Television is an
integrated media service for most people. Open broadcasting is the
same thing but at a deeper level.

You don't use, say, police scanners, because you were never exposed
to their value and thus you have no concept of just how powerful they
can be in keeping you abreast of criminal activity in your
neighborhood or how they can empower you. Thusly, you squint and
smirk when they are neutralized and some people who DO recognize that
value complain. And that is the tragedy of police scanning. They
were never EXPLOITED as tools of empowerment and people are suspicious
of them, of the people that use them, and of the emotional well-being
and integrity of people that use them. But it's incorrect and I'm
glad to be among the voices of those trying to set the record
straight. Had you been exposed to the police scanner when you were in
kindergarten, had been allowed to play with one, allowed to take one
home to your family for them to use, you'd feel a lot differently. :)
This entire issue of exploitation is addressed in the
alt.broadcasting.radio.open FAQ if you wish to see it.

>"Living at risk is jumping off the cliff
>and building your wings on the way down" (Ray Bradbury)

I downloaded the Canadian data for my area. It contains
transmitter location (Latitude/Longitude) among other things.

I'm planning to write a program that takes frequency hits
downloaded from my Scout and compares them to the Canadian
Frequency Database. It would look for the nearest match
based upon frequency and distance calculated from the
Lat/Long of the Scout intercept location versus the database
Lat/Long for suspected matches.

Before I go write this program, has anyone written something
similar already? Is there source code I could tweak to
match the Canadian record layout?

Would anyone else find a program like this to be useful?

Source record: 197052

Hi folks!

Saw an ad last night for a Motorola product called "TalkAbout" that is being promoted as a family communication system. They claim the range is about two miles and they run at .5 watts in the UHF range. More specifically, the stated frequency range is 462.5625 to 467.7125 covering 14 frequencies.

Apparently, these are part of a new FCC range allocated for "family use" and there are other products popping up for this market.

Anybody know more about this? What are the actual frequencies used, and do they very by product line...or are they all on the same channels, so to speak?

- Dave

This is true, but criminal use of those broadcasts has only become a problem since the invention of those small programmable scanning devices. There are NEW issues which you seem to feel comfortable just glossing over...

>The procedures and laws are in place to deter taking advantage

>isolationism.

I think trunked systems offer a degree of control for the people who are supposed to be responsible for what goes out for the general public. I don't have a problem with routine business being conducted over a general broadcast frequency, but I do have a problem with some scanner-jockey wanting to be the one who decides what stuff goes where.

Well Steve I don't see why you couldn't use the Hamcom interface if you
had the software. The simple 714 opamp interface allows one to set up
for Hamcom type software (input pins are changed). I'll look into the
ACARS programming task.

I have many radio/electronic related links on my web page at

Guess what? Life is rough. You seem to be finding that out every
day. You seem to be quite predictable on your beat, too. I bet the
drug addicts love when you're on, because you can't think past their
level.

Stop being so mundane and predictable with your job and try to use
your brain a little. You seem to understand that the crooks sometimes
have scanners - so learn from it !! Learn to predict that and act
accordingly before you go out on some pre-determined roundup. If you
can't out-think some low-life druggie, you have more problems than
worrying about who's listening to you.

Now, because you DON'T act this way, I think you are full of shit and
don't hold any type of law enforcement position anywhere. Except for,
maybe, a dispatcher somewhere.

Basically these are UHF CB's.

The FCC allocated these freqs last May I believe? Anyway, the max output allowed is .5watt. No license required. You can use CTCSS coding if you wish not to hear other junk from other people. Rat Shack has handhelds that are in the $120/each price range (I think that's the price).

What Dave states is absolutely true here in most of Northern California standard day-to-day calls are handled via unsecured freqs. But when the situation has turned "critical" the police turn to a secured channel so that the suspects can not over hear the officers and use the officer's postions to their (the suspects) advantage. I myself listen to the police (local, highway, county, and state), doing this allows me to avoid the accidents and highspeed pursuits and stay out of the way of the officers trying to do their job. Keeping the day-to-day calls on open freqs. also allows the radio and tv news casts upto date on where the accidents and problems are durring the rush hours and allows the reporters to tell the rest of the public, yes the unfortunate ones who dont listen to a scanner, how late they are going to be for work.

Absolutely, and digital systems give police agencies the latitude to

create entirely new realms of secure communication groups. In
fact,

for all my advocacy for open broadcasting there are things that are

openly broadcasted today that I feel should not be. Specifically,

response to alarm calls (more and more being handled by MDTs),

tactical operations (as in your hostage situations), and surveillance

operations.

My argument is delicate. I do not believe basic patrolcasts should
be

closed. Citizens should be able to know about accidents, police

pursuits, calls of suspicious activity, disorderly conduct, and other

incidents that are innocuously referred to as "random calls for

service" by the public, until a situation becomes more. At some
point

these calls may turn into more critical events, and appropriate secure

channels can be used. When you get right down to it, it's not
that

much different than the way things are done now.

Dave

Since ACARS is AM, you would have a problem coming off the NFM
discriminator tap, and I doubt if you could do 2400 bps via the audio
output jacks. I also am interested in ACARS and have successfully hacked
mdtstuff and trunker to my requirements and for Mickeysoft C. I would be
interested in doing an ACARS app but I had trouble doing ONE discriminator
tap off my BC3000XLT and I don't think I can fit another one in the box.
Also, AM is a lot noisier and there is much less signal-to-noise separation
than with NFM. I am open to suggestion on the subject.

Actually there are more people doing just what you state would make national news that it doesnt. I have seen many people arrive before the police and attempt to solve the problem theirselves or just get in the way of the officers doing their jobs. Now I am not saying that all police freqs should be digitalized and scrambled, but just handing out radios to the general public, even recieve only, would cause more harm than good.

I use cheapie Radio Shack headphones (the cup type) that I bought 20
years ago (that long?). Volume is fine. In fact, I have an inline
volume control to turn it down a little. The scanner's (RS Pro-25)
volume control adjusts the radio volume, but not the keypress beeps,
and they are too loud with the 'phones plugged directly in to the
scanner.

> I love the Shack!!!!!!!!!

Hmmm... you should check into the new treatments now available... :)

If you wanna have a little fun with the sales droids, go into RS and hover over the Aptiva or Cellular display, and carefully read the brochures. A droid will magically appear. "No thanks, just looking right now..." Hang out for 10 minutes or so, and that person will hit you 3 or 4 more times, drooling..... If you really want to taunt them, ask if an extended warranty is available for the computer/cell phone/watch battery....

Another aside: RS has a policy that droids must greet a customer within 30 secs of walking in the door, and then again within 2 minutes if the customer turned down the droid's help the first time.... AND again, a third time, before the customer leaves the store. It's policy, and on a poster on the bathroom wall of every RS in America. :)

Source record: 197082

I suspect that the poorly worded implication is that the discone antenna's major asset is that it is very broad banded. While the concern in receiving antennae is gain, a good impedence match is the first concern with transmitters and gain second. Discones, while showing little gain, allow transmitting over a wide range of frequencies.

Jeeeeeeessuuuuss!!!!! We're talkingt about POLICE radios, here.
NOT military. cheeeeeeeese!!!!!!!!
BTW, I'm assuming that everyone here is smart enough to figure out
that we're talking about RECIEVING signals, and NOT transmitting.

Will you shut up if we all get together and send back your share?

You pay for the patrol cars, but I doubt you will ever drive one. You
pay for the drugs on board the ambulance, but you will never be allowed
access to them. You bought the PD's guns, but you will probably never
fire one.

For a real Ham ticket it is. 13 wpm copy speed to be exact. Its the 2m and 10m bands that are code free. If you call that Ham Radio then you must include CB and Family Radio Service handhelds as well. Nope.... real Hams transmit world wide on 80m, 40m, 20m, and sometimes 15m and are allowed to run as much as 1500 watts of power. CW helps weed out the misfits who would broadcast on 46 meg. to all their neighbors portable phones, disrupting their conversations.

Sounds like they're using "speech inversion" which is a very old method of scrambling the voice transmission. Ramsey Electronics (800-446-2295) sells a
Speech Scarmbler-Descrambler in kit form or fully wired and tested.
See the Ramsey full page ad in Monitoring Times.
Good luck

com

My wife Rita and I worked on the film
GODZILLA
last weekend at Wall Street and Nassau in Manhattan.

I had my programmable scanning radio with me to hear the production crew.

This is very handy. When you walk away to use a pay phone or the bathroom you know whether or not to hurry back for a scene that you are in.

I was UNABLE to pick up the production crew!

Does anyone know what frequencies that they are using?

Usually I can pick up production crews on the following movie/TV production frequencies which are the only ones that I know:

152.8700
152.9000
152.9300
152.9600
152.9900
153.0200

173.2250
173.2750
173.3250
173.3750

I personally would like to know what the circumstances are to officer Howells case , how did a scanner save his life ?

All the people from "scannerland" as we call it here are usually either old people that get the 100 channels of their turbo scan jumbled so they are confused about the vehicle accident in the safe at the bank thats being robbed. Or about the fire in the middle of the lake at the same time there is a person drowning there. Or we get the real helpful 20 year old that we cant understand because he has a chaw of tobacco in and his false teeth out.

If the public want to help call the police on the phone.

Any one with balls enough to think there is a "secret" police force should get involved in politics and find out for themselves. More than likely the public will laugh the loser out of town because they will see what a paranoid leftist liberal he/she is.

I wonder if Pinero wants to monitor computer transmissions as well.
A lot of sensitive and private information goes through there.
Currently, departments that use VHF (?) systems pass this data over
the air. Anyone with a scanner has acess to it.

The Florida couple did a number of illegal things. In Florida, it is illegal to operate a scanner from a vehicle. It is also illegal to share information you hear with uninvolved parties, and to use the information for gain. They could be charged with all of these things without having the ridiculous cell ban. If you use a cell phone and ever think that you will have privacy, you are only fooling yourself. Easily modifiable scanners were sold for years. There are 800 MHz downconvertors. You can even pickup cell calls on old TVs (try tuning channels 79-83 and fool with the fine tuning control). Besides, there is a new standard for mobile phones which is emerging. It will be all digital. This may free up the old cell bands for other purposes in the future.

I need help please!

I currently have PRO-2006 and PRO-43 scanners. I was trying to listen to broadcast from SPACE SHUTTLE on 146.655 on both scanners. On PRO-43 it picks up that frequency with no problem using the regular rubber duckie, on the otehr hand on the PRO-2006 it does not pick up anything on that frequency, just noise. I wander, if there is anything wrong with the scanner or is it something wrong that I am doing. I have also tried different antennas with the same result.
tks,

I don't see a problem with it. National security, you say? Does my
country have a clean concious? Oh, now it makes sense.

You fucking fool... What if someone arrived on the scene before the police
and SAVED a life that would have otherwise been extinguished. Do you think
you're GOD? Do you think that YOU are the only one that can save a person?
Wow, that must be one hell of a power trip...

For real. The police say, "we get used to the job... People don't
understand our brash humor because..." Did you ever think that they TOOK
the job because THEY were a gawker? Of course they will defend their
soft-heartedness to the nail because, "They are trying to prevent these
tradgedies."

1966. !!! ADI AT-600 !!!

Newsgroup: rec.radio.scanner
Date: 1997-05-22 00:00:00 UTC
From: masa@writeme-x.com
Message-ID: <3383b0d3.8564481@news.bctel.ca>
Source record: 197227
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur

I purchased AT-600 and it finally reached to my home today...
I will leave some comments.

well... I bought it for $300... I thought this would be the lowest $
or at least border line to get a new dual bander... in a good
quality...
It is not bad deal at all first of all... considering the features in
the radio.
For the features, it receives multi Rx including the cell phones with
30 KHz step (warning: it is illegal to receive cell phones in the
states. CAUTION !!) + FM radio stations. you don't receive both of
them directly though.
You can monitor two freqs at a time, crossband, decode DTMF, have
three power choices and so on. You can store up to 200 channels.
You can also modify your tranceiver very easily so that it transmits
multi Tx outside from ham freqs (warning:: it is illegal to transmit
unless you have an appripriate license within non-type approved bands.
CAUTION ! don't even think of "saying hello to cops !!")

Only the problem that I have is the heat. even with the low power
setting, you will feel warmth from your tranceiver as you transmit.
I hope it does not break down the circuit...
Otherwise, it seems to be a very good radio.

I recommend this tranceiver [AT-600]. If you consider buying it in
near future, it is a very good choice. As far as the low price and
many and many features are concerned, I am sure (not guaranteed) that
you will be happy with your investment.

I was trying to help people out there who was considering buying
AT-600. I hope this helps.

>Dr Pepper
>Good ALL the time
>(Well, , , SOME of the time, anyway :)

You all have forgotten, or didn't know, that you can get radio transmissions AND telephone conversations of your local PS agency by getting a subpoena for the recordings of the aforementioned items. Police agencies are very aware of that fact. Therefore, if some transmissions are scrambled, that does not mean that no one will ever hear them. The encryption is to eliminate problems in real time...not to keep you from enjoying the hobby (even though it does ruin the fun.)

So, when you say that encryption is to create a "secret police," you are very wrong. All police communications are available via the method I mentioned...including phone calls and cell phone conversations to the PD.

Now that I think of it, one can get more information that way than by listening to a scanner...it is just delayed.

Conspiracy buffs are interesting. In this case, you can tell them that there is no evidence of a conspiracy, and they will reply with, "See what a clever conspiracy it is?"

funny you should ask. I had been using my RS CATV pre-amp down at the radio end. I recently put it in the attic with my RS discone. The improvment was dramatic. It more than makes up for the signal loss associated with mounting the antenna in-doors. I'm now hearing signals that weren't even faintly present before.
Try it.. you'll like it!

Obviously, Dave is not a policeman. Dave has never dealt with the shitty drug-using criminals that have scanners. Dave has never gone to serve an arrest warrant on a suspect that just fled thanks to the info he received on his trusty scanner. Dave has never attempted to make a traffic stop on a methamphetamine user that has a scanner and knows if you have a cover officer coming or not.

Sometimes it kinda sucks having to stop driving your patrol car just so you can communicate via MDT, when you could have just transmitted your traffic over the radio.

Gee Dave, guess what I do for a living? Gee Dave, guess what my opinion is? There are always two sides to an argument.

It looks like I am having the same trouble as a lot of others. I am trying to FTP and getting kicked in the face. I suspect that it is because I did not find instructions on how to go about it except through this news group. I suppose by then I have been locked out. 24 hrs? I read in one posting that it happened to someone else.

Any way, this posting should meet the requirement of step 13.

I hope I can make the FTP work.

<<In Florida, it is illegal to operate a scanner from a vehicle.>>

It is not illegal to operate a scanner in a vehicle in Florida. It is illegal to install a scanner in a vehicle in Florida if you are not covered by one of the exemptions. In an formal opinion, the Florida Attorney General's Office said "installed" means connected to BOTH the electrical system and an external antenna mounted. Thus, a handheld scanner laying on the seat and connected to the cigar lighter would not be illegal.

1978. ** Scanning FRS vs. GMRS **

Newsgroup: rec.radio.scanner
Date: 1997-05-23 00:00:00 UTC
From: MacUser@Penn.Com
Message-ID: <MacUser-ya023580002305971919420001@news.penn.com>
Source record: 196840

I�ve just recently begun reading about Family Radio Service (FRS) and General Mobile Radio Service (GMRS). My research so far suggests they serve somewhat similar functions and exist in the same 460mhz range. FRS does not require a license and appears to be limited to .5 watt transmitters, GMRS requires a license and can run up to 5 watts.

I have a bank of 20 channels in my BC200XLT that I devote to experimental frequencies. I was thinking of plugging some of these in to see what might be there.

There are seven pairs of FRS frequencies, eight pairs of GMRS frequencies and eight more GMRS simplex frequencies. (I�ve listed them below.)

It would appear to me that the eight pairs of GMRS channels would be the best bet for me, mostly due to power output. Does that sound logical? Are there pros and cons to using just the lower (462mhz) or upper (467mhz) pairs in the scanner for either FRS or GMRS?

Anybody have any experience listening to any of these frequencies?

The FRS channel frequencies are:

Channel No.....(MHz)

1..... 462.5625
2..... 462.5875
3..... 462.6125
4..... 462.6375
5..... 462.6625
6..... 462.6875
7..... 462.7125
8..... 467.5625
9..... 467.5875
10..... 467.6125
11..... 467.6375
12..... 467.6625
13..... 467.6875
14..... 467.7125

The GMRS channel frequencies are:

Frequency Pairs for Repeater Use

Base / Mobile Repeater
==========
462.550 467.550
462.575 467.575

462.600 467.600

Just watch,,, the Friendly Cookie Company will come down hard on the TrunkTrackers. The government hates the fact that citizens are able to use electronics to get what they want: An ear full of what they are up to.

Another thing: You can be the Feds will come down hard on anyone making public access to public records fast and easy by using the Net.

Remember, I said PUBLIC records that are already available to the public, but to get them requires a postage stamp and some gov. agency about a week or two to get info back into your hands. The net is much faster and easier, but, here again, the gov. will hate the public having "rapid" access to those records.

It appears that We the People are not making enough noise in Washington to get the attention of the managers WE the People elected. And because of this fact, our freedoms are being eroded slowly.

Here in the state of Texas, we have a major probelm. The state is doing just what I said the Feds would do, they are considering outlawing public access to public records via the net. This may happen in your state next. If it does, you can count on us to help you. We will contact your state legislature if you post the info here.
The scanner/computer users of Texas who believe in public continued public access to public records NEED YOUR HELP!

Please call Texas State Senator Armbister's office at 512-463-0118. Tell the aide who will answer that you DO NOT AGREE with the Ruth Mc Clendon amendment to Senate Bill 370. Her amendment to said bill will begin to kill off public access to public records via the net. Currently, it is still legal, but she wants it stopped. PLEASE HELP.

So how do we tell a Ham from a scannist from a CB'er?

The ham spends saturday night talking on his radio because
he can't get a date.

The scannist figures, hey, why go on a date when you
can get all the sex you need by staying home and
monitoring cellphones?

The CBer figures he'd better put a radio in his truck
because he'll be out driving Saturday night,with
his honey and a case of beer :)

Cheers
Paul
All three...and PROUD of it!

I also tried the RS "bullet" preamp (don't remember the model #). I got
all kind of signals that were't there before, too. Unfortunately, they
were caused by strong signals overloading the preamp.

It would probably work just fine for someone in a fringe area, though.

Microwave live trucks and photojournalist dispatching for TV news crews will be found primarily in the 450-451 MHz range.

161-162 MHz is used primarily for radio station marti's, or remote broadcasting equiptment. When you hear your local rock DJ live at the stereo store, these frequencies will be used for his talkback to the studio and to the producer.

173-175 MHz is usually used for IFB's, or interruptable feedback units. This is the audio feed of what's taking place on air that is fed to the person wearing a mic on his tie and an earpiece. It works like a telephone. The user can hear the show, and the show can hear him or her once the mic is activated, and the producer can pop in with instructions to the user that only people on the IFB line can hear. These are usually very short range--you'd probably have to be on the scene to hear one.

Hi i would like to buy a radio scanner when i visit San Diego next week.
Can someone please recommend a good and reasonable price ($150) model
that can scan from 25 mhz to 900 mhz or up to handphone frequency.
Please let me know the shops that are in San Diego that i can get this
radio scanner. Thanks.

WRONG...

The feed from the air crafts is not satellite Bill. I doubt it even
low band microwave stuff. It more likely UHF and very wide band at
that.

It is possible to monitor some station up links such as those from
microwave trucks if your in the signal path.

The satellite links are something different and are sometimes used
also from mobile trucks on location but usually are for feeding tapes
or short live hits. Air time is very expensive and satellite time is
rented out.

Microwave signals are highly directional and can not be done while in
motion. I

Thanks for the education on how usenet works. I ain't never used this
dang ol' puter afore.

Perhaps you should go back and re-read the posts you are talking about
before you comment. They all took place on the same day.

I don't understand your other comments about depending on unobstructed
communications. You certainly aren't commenting on someone in the
public keying over communications of an officer.

What I assume you are referring to is the constant music being played
over the radio from the cruiser stereo or 'cartoon' noises the guys
like to make back and forth at each other. I would be much more
concerned about this crap as it happens 1000 times more frequently
than a citizen playing with a transmit capable radio.

Who are you going to blame when a fellow officer dies because of this?

"Gary R. Skuse, Ph.D." <gary_skuse@medicine.rochester.edu> wrote:

>Does anyone have any experience with Rosetta Lab's Winradio?

Hello Dr. Gary,

You may want to hold off for a few months if you need a product such as this.

ICOM has announced (to dealers at least) a new computer driven receiver, model IC-PCR1000. External black box about the size of a smashed flat cigar box, no hardware controls, just 12 VDC in, serial port out and BNC antenna connector in, very wide coverage of 10 kc to 1300 mc, bandscope, all mode, unlimited # of channels, several selectable user interface screens, runs under Windows any flavor, tunable bandpass filters, digital afc, I.F. shift, tone squelch (finally!), triple conversion, quite decent specs according to the sheet they faxed last week.

No firm price but they're making noise somewhere in the $600 region. This means it likely will be higher.

ICOM claims the thing is based on the R100, but many of the features seem to be from the R8500. Looks more to me like an R8500 with a soft front panel.

If you don't need something in a hurry and you have a computer, you might want to wait and see if this new ICOM thingie would be a better choice.

No further info available at this point. We have a demo coming and will post when we've played with it.

Regards ..... Steve

Mark, you can buy the board and switch from a company called Norham Radio in Canada. I dont know the Web address but I have ordered the same from them myself. You are lucky being in the US to be able to have that option on that scanner. Here in Australia, Uniden has decided that this scanner doesn't need CTCSS and has does not supply any as spares, so I have had to order it from the US.

Guess what? Life is rough. You seem to be finding that out every
day. You seem to be quite predictable on your beat, too. I bet the
drug addicts love when you're on, because you can't think past their
level.

Stop being so mundane and predictable with your job and try to use
your brain a little. You seem to understand that the crooks sometimes
have scanners - so learn from it !! Learn to predict that and act
accordingly before you go out on some pre-determined roundup. If you
can't out-think some low-life druggie, you have more problems than
worrying about who's listening to you.

Now, because you DON'T act this way, I think you are full of shit and
don't hold any type of law enforcement position anywhere. Except for,
maybe, a dispatcher somewhere.

Does the Pro2004 have a keypad lock, if so is it on or off? Have you removed the cover and checked the keypad, is it sticky, or have any signs of corrosion? Will the numbers opperate by pressing on the switches themselves?

David Beck <DNCW25A@prodigy.com> wrote:
>Area 51 is still very active.

After reading the PopMech article last weekend, I went away with more questions than answers... I do not for a second believe that the "New Area 51" is a replacement for Nellis' Dreamland.

- The article seems to focus on a single mission profile, that of a vertical launch of a high altitude AIRcraft which serves as a booster stage for a single, small (5 x 10 ft) payload/2nd stage spacecraft.

- The appears to be no facilities in the NEW Area 51 for conventional fixed wing aircraft, leaving trucks and helicopters as the only means for bringing in the mission critical payloads and equipment required for the "anywhere in the world in 40 minutes" response.

- While just an artist's rendering, and artistic license could be applicable, the "mission profile" depicts the payload being launched from the booster-plane towards the West, thus losing 1000 mph of insertion orbit trajectory.

- The "40 minutes to anywhere" could be possible if one starts countdown at the time the payload is launced from the booster. An LEO (low earth orbit) is roughly 90 minutes... putting it at about 45 minutes for going 1/2way around the globe.

- Dale Brown's "Sky Masters" work of fiction is more believable than PopMech's profile. "Sky Master's" uses a converted 747 to launch specialized payload satellites. I'd first believe Tom Clancy and Dale Brown books before this article from PopMech... surprisingly, it was PopMech or PopSci which published the early, on target speculation of the Stealth Technology aircraft. It was also one of those mags which got me interested in Tom Clancy books by publishing excerpts of one of his books.

I'm a native of Tucson, lived in LA for five years, now live in Phoenix.

Think you'll like the place, even if I'm a bit biased. No, there isn't the "culture" (if you can call it that) of SoCal, but the lifestyle is much more relaxed, and the scenery is beautiful. MUCH lower cost of living, too.

Problem with Tucson is that too much of it has decayed in the name of "no-growth" and "historic preservation". Southern Arizona is a polar opposite of Phoenix politically--while PHX is a Rush Limbaugh haven, Tucson is full of tree-huggers and the like. While I'm comfortable to some extent with both attitudes, it seems to me that the folks in Tucson are a bit stiff when it comes to reasonable, desert-friendly development.

I recommend, if you have the bucks, a home in the Catalina Foothills or the far east side of town. Plus, a prerequisite for any length of stay is to become a fan of the NATIONAL CHAMPION UA basketball team. :) (Had to stick that in--I'm a UA alum).

If you like football, though, tough luck. Not much of a program. :(

Hope you enjoy your time in Baja Arizona. The place may grow on you in time. I hope to retire there in a few years.

As for freqs, I'm a SW/scanner hobbyist. When I'm in town visiting the folks, I just pull out Police Call--haven't had time to weed out the most active freqs, but that's one of the challenges of the hobby anyway.

Take care and 73's,

Marc

2005. New BC235XLT TrunkTracker review available now

Newsgroup: rec.radio.scanner
Date: 1997-05-23 00:00:00 UTC

I tested a new Uniden BC235XLT TrunkTracker. Though the
review is scheduled to appear in July 1997 Monitoring Times
magazine, you can read it right now on the web.

Follow the link in the BC235XLT section of the page:

www.grove.net

Happy tracking!

well since we arent criminals or drug users go talk to them. as to the
99.999% of radio listeners who resent govt telling what we can and
cant listen to, this is a good reason why people need to keep an eye
on the cops. its a justification for scanning.

Simply put it is a terrible radio with few redeeming qualities. I have owned a few and am actually fond of the little guys like some people are fond of B movies. The R1 has 100 channesl with 1 bank, intermod, not real easy to operate, minimal battery time. Incrediabley bad performance on HF and MW. If you need the small size go for a Welz 1000/AX 400 although not the best radios they do out perform the R1.

Until you've worked in an Officer's position, don't try to tell him how to think, or how to judge a situation. We are taught that Nothing is Routine.. However, some things are predictable. Also, some depts are restricted by bidgets, and can't afford to but all of the new whiz-bang radios because some group of citizens won't turn loose of the money (City Council etc) because it may ruin their fun (listening, or running illegal ops). I agree that there are several times that citizens help when they hear a broadcast, but there are MANY times when the Scumbags are able to get away because they heard a transmission in the clear from an agency who cannot get scrambled gear, or they take out an Officer, and leaves his family with NOTHING except a little insurance money, some memories, and a lot of SORROW! I am a Peace Officer, certified in Texas, and commissioned in a small city. I work a lot of drug traffic, and a lot of assaults. We are in the middle of the drug traffic lanes here, and I as well as others have had many close calls because anyone can get the clear freqs and use them for illegal purposes. Again, I have nothing against the legals having access, it's the ILLEGAL folks I am AGAINST all the way!! (16 years here, 1 in Az., and 4 in In. as well as TOO many in the Military as a Law Dog).

No we have 2.5 megawatts of RF at 607.0 MHz, our transmitter sits at 1200ft. HAAT, on Shepherd's Lane in Dekalb County. We are on the same tower as WGNX TV-46 (CBS), WKHX-FM 101.5, WPCH-FM 94.9, WKLS 96.1 and WSB-FM 98.5 has their backup 50KW transmitter on the tower as well. AT&T Wireless is n the process of installing one of their 1900MHz PCS sites at the 300ft level presently.

Oh, bullshit! It's people who post CRAP like this that drive off many
potentially valuable hams.

If any of you lurkers think the above idiocy represents the attitude
of all hams, think again. Sure, lots of Luddite Lowlifes think this
way, but you can easily ignore them if you wish. Don't let this sort
of supercilious "dog in the manger" attitude deter you from getting a
ham ticket.

Ham radio needs new blood to counteract some of the "Good Ol' Boy"
attitude held by a minority of hams. Get into the hobby, find a niche
that interests you, find others that share that interest, and start
contributing to the hobby. It's a blast, if you're willing to take
the time to do it right.

Oh, and incidentally, William, for your information 10 meters IS a
worldwide band, which you can work with low power and minimal
antennas. I have Ten Meter WAZ No. 128 to prove it, plus well over
250 countries worked on ten. I worked 100 countries at the bottom of
the sunspot cycle when I was a new ham. A "real ham" is anyone with a
legitimate ham ticket, whether it's an Extra of 40 years, or a brand
new codeless Technician.

What's *your* callsign, Mr. Lee?

>
>Tell us about your new scanner and how it works please.

hello lazy one.... where have you been the last few
millineum?

go to: http://www.altavista.com search for trunktracker

go to: http://www.grove.net more about the radios

go to: http://www.acecomm.com more here too

go to: http://www.scannerworld.com i assume they have info

go to: http://www.advig.com follow your nose

go to: http://members.aol.com/wwhitby2/trs.html
go to: http://webusers.anet-dfw.com/~lrkn/trunk.ntm

then try http://www.lycos.com
.yahoo.com
.excite.com
.search.com
and search for trunktracker or trunktracker
radios

now, does your area police/fire etc. use the 800 trunked
system...? no use getting this newbe unless theyu are on 800 Motorola
trunked.....

the unit only works for Motorola and not Uniden....

now, do it yourself and feel a hell of a lot of satisfaction
for your persistence.....

bill conduit
etc.

Nah, let the man attempt to sell his wares for whatever price he deems correct. You have the same option too. The market will speak. If his price is too high, he will have a lot of scanners on hand and he will lower his price accordingly.
May the best price win!

2029. Satellite Hacking

Newsgroup: rec.radio.scanner
Date: 1997-05-23 00:00:00 UTC
From: David <david084@flash.net>
Message-ID: <3386207F.12FC@flash.net>

Does anyone know how to use the unused channels on various geosync satellites for data or phone transmission?

If you do, please elborate. If you know of documentation on the subject, where might that be found?

Please take a look at our site...

National Frequency Database
http://www.agt.net/public/gpnet/gpnet.htm

Our site caters to Canada and The United States in regards to
frequencies.

Please let us know if there is a specific location you are looking for.
We can begin compiling the data for you ahead of time using the Canadian
Communications Database files we have on hand.

We also invite, and prefer, individuals to send frequencies they have to
us, as these will be most accurate.

Hope this helps,

Dale
National Frequency Database

You might want to think twice before you attack those who agree with you. Mike may have responded to a point made several days ago. This group tends to move fast and some points appear to be moot when one wants to respond. You also have to understand that, for an officer, you may only have one chance to give a call for help. That one chance is very critical and many officers depend on it being unobstructed.

Conscience? Would you have a clean conscience knowing that not only you but an enemy could track military movements? Again, if you knew history, we had a "Loose lips, sink ships" campaign because an enemy used this information to attack our shipping.

At least, Mr. Pinero concedes the necessity there. Your opinion was pretty assinine. But don't worry. It's what we've come to expect.

I'm so glad that you've decided to replace Larry Butts in that category. He needed a rest.

I just want to be able to have decent communications. We already know
of several spots that you can forget about broadcasting in. This was
made possible by the utility company putting up new towers. In many
areas, officers must transmit several times before the dispathchers
can understand. Then they have to play back the tapes!

Just another trunking anecdote: A local USAF base had used the US Trunked Group 1 frequency set as discrete frequencies for a long time until last fall. At that time, too many different organizations needed HT channels so they went into active trunking mode using the same freq set. Now, you can hear missed acknowledgements, repeated calls, "say agains", the whole mess. It seems that if the response comes back before the sender drops his key, the reply is totally missed by the sender. They are slowly learning to wait for an unkey before answering, not very easy in a heavily tasked environment.

this issue is really redundant. People calling others names
because of download time being assessed against their allowance.

If you cannot stand the heat, get out of the kitchen.

For 12.95 and 15.95 and 19.95 you can subsribe to all sorts of
Internet Providers such as Netcom, AOL, Compuserve, etc. and
then the others who charge less.

So what is the issue, really?

Too cheap to pay the price of the ticket to take the
unlimited-use journey or afraid to ask your mama or papa for
the fare to just do it and shut up.

bill conduit
etc.

I think most of us know what will happen if you use a simple
T-connector, the Scout will hit on every scanner birdie and stay there.
You need isolation between the scout and the scanner, not as easy as it
looks. One idea would be to trash this combo and go with the Opto
Xplorer. It solves this problem.

Sounds like voice inversion. I'm not sure, but I think the manufacture of decoders became illegal with the passage of the Communication Privacy Act. I've seen them at a few ham fests and radio shows being sold used. Happy hunting!

Michael,

Radio Shack sells a headphone that has a volume control on the cord for about $10. If you turn the volume on the headphone cord down and then turn the volume on the scanner up to compensate you will find the amp noise is gone. This unit also has a switch for mono/stereo which you will want to set to mono.

Good Luck...

Carl S.

Sorry for the sarcasm, but:

Want to trade for a "Tickle Me Elmo"?
How about a couple of "Beanie Babies"?
Maybe a "Buzz Lightyear", "Power Ranger", or "Cabbage Patch".

Hope this makes someone smile.

Eric

P.S. Ah, the laws of supply & demand.

Martin;

You CAN receive Inmarsat, but really, most of the traffic has gone over to the digital modes at this time. Not much is left on the old "Standard A" analog transmissions. If you have not already invested in the equipment, it would not be worth doing.

John...

>Are some 900Mhz phones unscrambled?

Not all 900 Mhz cordless phones are scrambled. The cheaper models are not using spread spectrum. A good example of this is the Radio Shack cordless phone that sells for $159.00. It is 900 Mhz but is not scrambled. But their $259.00 cordless is, by means of spread spectrum. You will find that you can hear the 900 Mhz phones much further away than you can the 46/49Mhz phones...

Although 80% of 900Mhz phones are scrambled....

2065. Re: Are Your Police Going 'Under Cover'?

Newsgroup: rec.radio.scanner
Date: 1997-05-23 00:00:00 UTC
From: wb36atl@aol.com
Message-ID: <19970523034401.XAA00576@ladder02.news.aol.com>
Source record: 197122

Public safety is just what it says: PUBLIC. Everything that a police agency does is a matter of PUBLIC record. However, there are some cases where transmitting in the clear could cause a threat to life, liberty and/or property. For example, during a stakeout or other sensitive operation, it is clear to see that officials involved need to have secure communications for such activities (DVP,DVi, etc.)

However, this should not be standard practice during routine calls (traffic stops, alarm calls, regular patrols,etc.) But detectives following up leads on a case should be entitled to use secure modes, as transmitting such sensitive information could get into the wrong hands and blow a case wide open. Most law enforcement people do not have a problem with citizens listening in on scanners. Many law officer's family or spouse use the scanner to listen to their very family member at work. But those same officers would agree that there are some things that the public has no business knowing, until a case has gone to court and been tried. It is this very reason that encryption is needed for protection of not only law officers and general public safety, but the security of the judicial process.

There are specific places to look for news media frequencies
search 450-451, and 455-456 also 161-162 and 173-175 mhz
you can also find some newspapers using 453.00

here in Phoenix the R&G also uses a few 852 and 854 mhz frequencies for
circulation and photographer dispatching.

:
: I have found the following frequencies to be active in Houston:
:
: 450.7125 -- This is Metro Traffic main channel, all their traffic
: reporters and aircraft use this frequency to report trouble spots to their
: base unit for use by the radio stations in town. This is a great
: frequency to program in a mobile scanner if you do alot of driving during
: the day like I do.
:
: 450.6125 -- Channel 11 helicopter (Air 11) -- not to much activity here --
: some times this frequency is scrambled.
:
: 450.2875 -- Channel 2 helicopter
:
: 161.7000 -- Channel 13 helicopter -- This is the most active of all the TV
: helicopter frequencies.
:
: For HPD, they usually GB (general broadcast) a call for their helicopter
: (Fox unit) over all the main frequencies. I have had success programming
: one bank of my scanner with the 9 main HPD frequencies along with the
: Special Ops frequency at 460.3500. I lock out all but Special Ops. When
: a call goes out for a Fox I manually switch to the frequency for the area
: of town it was requested.
:
: Hope this helps, good luck !!

You mentioned in an earlier post that open broadcasting is a media issue as far as keeping the public informed about criminal activity. Here in Akron, Ohio we are screwed. The only TV station that had news broadcasting was bought out and turned into an infomercial station. Our only newspaper doesn't care about reporting neighborhood criminal activity. Only articles about major crime gets printed. The local radio stations only report the major stuff, also.

Our city doesn't make the effort to let residents know about what types of criminal activity is happening. Granted that most of this information is open to the public, but who has time to dig thru all this stuff in the police department's records office.

Fighting for open broadcasting is even more important for us and our community policing & neighborhood watch efforts for the reasons stated above. I'm the head of our watch group and the most common complaint is the lack of information from the police department about neighborhood crime. The second complaint is from those of us that have scanners can't listen because our police switched to a digital radio system.

>license plate light out. It would make me feel all tingly inside to

The same tingly you get when you stroke your 'little billy club'?

>ruin your day, just because I know you don't appreciate the fact that
>at times I would put my life in danger to protect your dumb ass. You

Hmmm, appreciate someone with your piss-poor attitude? No, I don't
appreciate it.

>ticket for speeding down your own block. I'm your friend when I'm
>protecting and serving you, but I'm the asshole when you get the
>ticket or get arrested.

You got part of that right. It's clear you're just an asshole.

>I'm not bitching about my job, I love my job. I volunteered for it.

You don't have to bitch about your job, because I'm doing it for you.

>I'm just bitching about the insensitive citizen who puts the weight of
>all problems on my shoulder. I'M OUT THERE PROTECTING YOU, why don't
>you try to help me do my job instead of making it harder? If there
>were no police, who would stop the block bully from beating you like
>the brainless pulp you are? Have a nice day.

I wish you were NOT OUT THERE PROTECTING ME. You sound like the
type of guy who shoots first and asks questions later. You're the
type of cop who had no life in school, got beat up once a week, and
now it's payback time because everyone fucked with you on the
schoolbus and between classes.

How did you ever pass the psych test? There's no way you were
requited to take one, because you wouldn't have passed. You're a
friggin loonie.

Please, please, please post your department and badge number so I can
notify my town council incase you ever try to apply in my town after
you get booted from where you are now.

Thanks for wishing me a nice day, but it isn't necessary. I don't let shit like you ruin my day. I just enjoy exposing you for who you are.

Now. YOU try and have a nice day. Try not to have that 2nd cup of coffee tomorrow morning.

Does anyone have any info about the radio system in use by the Massachusett's State Police??? They used to be on Low-band (40-ish Mhz) but I'm told now they are moving, or have moved to an 800Mhz trunked system. Any info, or a pointer to somewhere that has more info would be appreciated

2093. UNIVERSAL M-400 DECODER FOR SALE

Newsgroup: rec.radio.scanner
Date: 1997-05-24 00:00:00 UTC
From: enedlram <enedlram@pathcom.com>
Message-ID: <01bc6863$2e82b420$c40ff5cf@default>
Source record: 196801

This decoder is in new condition c/w original box, manual etc. Absolutely mint because it was used only 15 minutes....that's right, 15 minutes!!

This M-400 decodes ACARS, paging (POCSAG etc.) as well as RTTY, SWED, FEC. PL tones and DPL etc., etc.

Cost $399.00 US. Will sell as almost new for $295.00 US plus shipping.

For more info, contact Howie WOLCHOK....howie@pathcom.com

2095. Need crystals...

Newsgroup: rec.radio.scanner
Date: 1997-05-24 00:00:00 UTC
From: gekko95@ix.netcom.com
Message-ID: <5m5dni$olj@dfw-ixnews10.ix.netcom.com>
Source record: 196848

I know, I know - for the price of a few crystals I could
buy a cheap programmable scanner. But I thought I'd
give this a try first!

I have a realistic Patrolman VHF/UHF scanner I would
like to just set up with the few main police frequencies
in my area as a 'kitchen' scanner. I am hoping someone
has the rocks I need in the 'junkbox' for a reasonable
price.

Here's the frequencies:

460.05
460.15
460.30
460.35

Plus 156.09 if possible.

I have a number of crystals that came with it that I could trade
if that's an option.

Anyway, I thought it was worth a shot! Let me know if you
can help out.

Thanks,

Dave gekko95@ix.netcom.com
Tacoma, WA

I use Universal's ACT-1 with my Drake R8's headphone output for ACARS and
it works great. The software that came with it does not work with Win95.
A Win95 or DOS version that works with Win95 would be great. Also, ACT-1
does not work off the discriminator on my PRO-2042 and works poorly off
the headphone jack. Hope this helps.

2103. Illegal scanners sold at Hamvention

Newsgroup: rec.radio.scanner
Date: 1997-05-24 00:00:00 UTC
From: jtward11@aol.com
Message-ID: <19970524044101.AAA29190@ladder01.news.aol.com>
Source record: 196856

Folks,

I guess the people from Atlantic Ham Radio have brass balls or something, 'cause last weekend at the Hamvention in Dayton, Ohio, they were selling brand new Yupis with full 800mHz coverage right there out in the open. Not only full coverage, but not type accepted in the US, an even bigger no-no.
I would have thought that being the largest radio convention in the world there might have been at least a few FCC types poking around, and given the amount of military hardware for sale in the flea market it wouldn't surprise me if an FBI agent or two wandered through. But if either of these "I'm-from-the-government-and-I'm-here-to-help-you" types showed up they ignored the Yupi display.

Getting your hands on a two-way radio (set to the right frequency and
CTCSS tone) is the way to go. Not only do you get to drive the
McEmployees insane, but you have the added bonus impersonating a
McEmployee causing the customer to react in interesting ways!

Of course, this sort of fun is highly illegal... but is great for a lot
of laughs!

>level.

How the hell would you know if I'm "predictable" on my beat or not?
What did I write in my message that insinuates that I'm predictable?
Do you think I have not learned from my experiences? I never transmit
the location that I'm attempting a warrant service at over the air. I
use my MDT. If I think somebody is listening and scanning my primary,
I'll switch to a secondary, and communicate it via MDT. Did I give
the same example more than once? All I'm doing is pointing out my
experiences where the bay guy has gotten the upper hand by having a
scanner.
>
>Stop being so mundane and predictable with your job and try to use
>your brain a little. You seem to understand that the crooks sometimes
>have scanners - so learn from it !! Learn to predict that and act
>accordingly before you go out on some pre-determined roundup.

I have learned from it. How did you ever get the idea I didn't?
Perhaps a possible solution is simply not to transmit anything over
the air, try to use the MDT more, or somehow have our freq scrambled.
But then what shitheads like yourself listen to? If you think freqs
should be public access, then why don't you bitch and moan about
military freqs? Is there traffic anymore sensitive than ours? Are
their lives in more danger than ours on a daily basis? The military
fights a war every generation, they risk their lives an average of
every twenty years. I risk my life everyday by dealing with the scum
of the earth. (And I was in the Marines during the Gulf War, so don't
even try to retort.)

> If you can't out-think some low-life druggie, you have more problems than
>worrying about who's listening to you.

If I can't out-think a low-life druggie, then you're the one with problems, asshole. I'm the guy protecting your stupid ass, your family, your home, and your business when you're awake and asleep.

>Now, because you DON'T act this way, I think you are full of shit and
>don't hold any type of law enforcement position anywhere. Except for,
>maybe, a dispatcher somewhere.

Oh, so you KNOW that I don't act this way from one posting huh? Well the joke's on you jerk. I am employed and I am a police officer. You're the type of guy I'd give a ticket to just for having your license plate light out. It would make me feel all tingly inside to ruin your day, just because I know you don't appreciate the fact that at times I would put my life in danger to protect your dumb ass. You appear to be the type that would call the police because too many jerks are speeding on your block and endangering your children when they play. Then, you'd call my Sgt. and complain when I give you a ticket for speeding down your own block. I'm your friend when I'm protecting and serving you, but I'm the asshole when you get the ticket or get arrested.

I'm not bitching about my job, I love my job. I volunteered for it. I'm just bitching about the insensitive citizen who puts the weight of all problems on my shoulder. I'M OUT THERE PROTECTING YOU, why don't you try to help me do my job instead of making it harder? If there were no police, who would stop the block bully from beating you like the brainless pulp you are? Have a nice day.

2106. Pittsburgh police "Channel 8"

does anyone know the frequency for Pittsburgh police's "Channel 8".I've pretty well gone through the frequency listings available to me. I hope this is an OK request as this is the first time I've posted to this group.

Thanks. Would appreciate it if you could respond to my e-mail address which is: almar@telerama.lm.com

If you're in the signal path, have an antenna high enough to intercept the transmission - and the right receiving equipment (13 GHz if I am not mistaken). The odds of the average Joe receiving a feed from the local news van is pretty much unlikely, not to mention a violation of the ECPA.

> Microwave signals are highly directional and can not be done while in
> motion. I

WRONG. Microwaves are not directional. They do radiate in straight lines, as do any other electromagnetic wave. However their directionality is determined by antenna design. News trucks use very directional antennas to boost their effectiveness as signal strength can be greatly affected by surrounding terrain, vegetation and buildings that stand between the truck and TV station.

TV helicopters generally use microwave. They can use omni-directional antennas because they are 500+ feet in the air, giving them perfect line-of-sight to the TV station. With these conditions, antenna gain and transmitter power isn't all that important as long as there is a clear shot between transmitter and receiver.

Since you see so many towers with microwave dishes on them, there are a few reasons for doing this. You prevent interference with other towers on or near the same frequencies, interference from other sources is minimized, and allows for clean and clear signal delivery.

FWIW, where I work, our computer network is on a 2.4 GHz system to link the two buildings together. The buildings are a 1/4 mile apart, the transmitters are rated at 10 milliwatts each, and the antennas have a 75 degree field and an 8.5 dBi gain. Throw a few trees between the buildings, and we still have full signal strength with data flowing at 3 mbps.

You can monitor the TV techs setting up a live broadcast. In the SF bay area, the feeds are very directional. They report back some sort of figure of merit (signal strength, quality, etc), and are very careful not to get a lobe of the antenna.

I suspect the helicopters are using omnidirectional transmission because they are moving and don't have the luxury of lining up antennas.

> Just watch,,, the Friendly Cookie Company will come down hard on the
> TrunkTrackers.
>
I doubt it. The Trunktracker though a nice product for monitoring routine stuff has some built in limitations. It will not trunk track when a unit switchs to private for serious comunication nor will it follow a phone patch in trunktract mode. I am certain that these limitations can be hacked around by changing the programing rom but then FCC type aceptance will be void. There is some kind of warning about that included by the manufacturer.
I imagine that the FCC is quite happy with the way this productt has been built.

Cleveland & Akron both went digital, so even if the BC235XLT could
follow it you would not be able to hear anything but static.

Hopefully Uniden et al will introduce APCO Project 25 scanners in the
future, as most of the digital systems conform to this standard.

The remote feeds for TV or Electronic News Gathering (ENG) are fed
back on several bands:

2GHz, 6GHz, 13GHz

Is is some what area dependent, frequencies are allocated by the local
SBE frequency co-ordinator.

The Pgh. PA area seems to be mostly 2GHz stuff, with some 6GHz as
well.

You would have to be DIRECTLY in the path of the signal to receive it
has this is done with a very directional antenna. Take a look at your
local ENG trucks most have a small half dish, or prong antennas on a
raisable mast.

The helos normally have a white radome on the bottom of the aircraft
for the microwave feed.

As for Satellite News Gathering or SNG, this is mostly done on the Ku
Band, and can be received with a Ku band satelite system, NOT a
DSS/DBS/DirectTv etc. system. Check out Satellite Times etc for the
info. The satellite magazines publish a list regularly of news feeds.

Conclusion: the FCC cares about this about as much as they care about the
5-10KW stations that jam each other continuously on 75m.

Nobody cares.

Source record: 196887

I owned an R-1 but sold it and purchased an AR 8000 soon after it was released.
Things I liked about it:
1. It was the smallest radio I'd ever seen. I could take it anywhere.
2. It was built solid. The body was made of high impact plastic with a metal backing....not like the flimsy 8000.
Things I didn't like:
1. The audio output was poor. If you weren't listening in an indoor quiet environment, you'd need a earphone.
2. Slow scan speed. (adjustable 10 or 20 channels per second)
3. Annoying squelch characteristic. Instead of a nice crisp open/closed, I could only describe it as "mushy".
The R-1 is a fairly complicated radio to use. The instruction manual is 56 pages.
Not for the faint of heart.
Good luck

<< nor will it follow a phone patch in trunktract mode.>>

Phone patches do not switch freqs. like regular trunked transmissions. If you hear a guy making a phone patch just switch to conventional scanning mode, find the freq. being used and listen to your little heart's delight!

As for "private mode," it's my understanding that the majority of systems do not have this option. Of course, it would have been nice if Uniden had been able to build it in, but I believe there were some problems getting around the copyrights here and the exclusion had nothing to do with the FCC.

Back in the bad old days when police agencies used conventional repeaters, programming their radios with the repeater output frequency as a simplex "talk around" channel was pretty common. Somebody, somewhere, apparently decided this was A Bad Thing as it seems that many trunked systems don't have this feature.

Police officers aren't stupid and they can be creative at times. Officers in departments with trunked systems _have_ found a solution. For the Indianapolis Police Department and the Marion County (Indiana) Sheriff Department, that solution is CB radio. Yes, that's right. The taxpayers paid through the nose for a Motorola system with two primary PSAPs, three secondary PSAPs, and multiple transmit and receive sites. The officers were all issued $1300 Motorola handhelds. Yet, just about every IPD and MCSD commission has a Wilson K40 CB antenna on the trunk lid and a CB radio stuffed into the console.

That'll teach the trunked system planners to take away the talk around channel.

Bob...

2143. AOR AR800 Audio Clipping

Newsgroup: rec.radio.scanner
Date: 1997-05-24 00:00:00 UTC
From: jpb@pobox.com
Message-ID: <33873acb.222115266@news1.ibm.net>
Source record: 196896

I saw a reference to an article in US Scanner News that talked about audio clipping on the AR8000. It suggested that the problem is that the 6kHz IF filter is too wide for some signals, and explains how to change the filter to 7.5kHz or 10kHz.. Unfortunately, the link to the actual article is broken. (Looks like US Scanner News now longer has a Web Site?!).
Anyway....Does anyone know the details on this? How do you change the IF filter???

thanks,
john

Drew,

Try telling that to the folks who have had their scanners purchased from overseas seized by U.S. Customs recently. While some are still getting though, some have been seized, and Javiation, for one, is not refunding the customers money. You buy at your own risk, and I can't say I blame Jonathan for taking that position.

Atlantic Ham Radio is a Canadian company that is based out of Toronto.
I think it's safe to say that because of AHR's bad reputation for not
supporting products, not honoring warranties and selling ham radios to
bootleg operators (etc. etc. etc.) they created lots of business for the
other ham radio outlet in town (Norham Radio).

Years ago I purchased an Icom IC02AT from (K)Lutz over at AHR. Two days
later the radio stopped working. I was a good boy and just took it back
to the store. He told me that batteries are not covered under warranty
and that I would have to pay a minimum of 45$ to have it repaired!! It
wasn't until I lost my cool (with a store full of customers) that he
fixed it under warranty. (it was a blown fuse in the battery pack - why
it blew, I dunno).

At one point they were selling Yaesu dual-band mobiles on the cheap.
However, they were not purchased through the proper channels and
consequently there was no factory warranty on them! I guess somebody
just imported them by themself?! Dunno!

Also, AHR used to give a lower price if you paid in cash (than with a
credit card). VISA and MC have very specific rules about this kind of
behaviour!

AHR always goes down to Dayton to try and lure some of their lost
business back. They have some scam going where if you order it down
there at the show you can pick it up in Toronto with no sales tax.

But that's not the best part. The owner of AHR is Lutz. He doesn't
even have a ham ticket!!!

I don't shop Atlantic Ham Radio any more.....

Cheers!

I think that is a serious miscalculation! If nobody cares
then why have the AR800s dried up? While the final story on
the Pro-26 is not known, they are being recalled. We can
only imagine that it is also the AR8000 syndrome.
The FCC does care...and it should with the large pockets
that the CTIA has.

> Anybody know more about this? What are the actual frequencies used ...

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

2156. National Federal Frequency Listing: Section 4 (Preliminary)

Newsgroup: rec.radio.scanner
Date: 1997-05-24 00:00:00 UTC
From: eagle28NO@iSx.netPcomA.comM
Message-ID: <33874fc8.302636@nntp.ix.netcom.com>
Source record: 196909

Hello all,
Here is a section of my federal frequency listing file. It is a rough preliminary listing, so, please bear with me and submit corrections and additions where needed. I will post the other parts as I get them ready. I have to work with many database, word processor, and spreadsheet files I have to integrate them. Remember these listings are not all inclusive but are general nationwide frequencies.
As I said before please let me know if you think anything is listed wrong or have additions to the listings.
Some listings show multiple channel designators due to conflicting "base" information. If I find conflicting information all will be listed untill the correct information can be determined if ever.

Best Reguards,
Jerry

As Dave Bryndal says, and I fully agree with:

THIS LIST IS NOT COPYRIGHTED NOR IS ANY OTHER LIST
PREPARED BY ME WHICH YOU MAY\FIND ON THIS OR ANY
OTHER BOARD AS FREQUENCY INFORMATION OBTAINED FROM
THE U.S. GOVERNMENT CANNOT BE COPYRIGHTED BY ANYONE
AND TO CLAIM SUCH A RIGHT IS A FARCE.

Military Affiliate Radio System

I worked with the Port Hueneme Seabee station untill they closed it
because the navy killed one person and caused another to have to get
out with a medical discharge.

Due to lack of funds and support they had to attempt to put a new
antenna on a tower without any assistance as all the equipment
required, although available, was said to be "needed for other
things".

Typical u.s. government. Someone has to be hurt or killed before
anything is done about it. They really swept this one under the
carpet.

I have the local newsclipping saved as a graphic to remind me of how
people are not important to the government; it's getting the job done
that is.

Direct from the ADI/Premier Communications site (www.adi-radio.com):

Q: Why did Radio Shack recall the HTX-204 and how does the recall
affect the availability of the AT-600?

PREMIER Communications has no knowledge of why Radio Shack recalled
the HTX-204. Officially, they claimed that they were "concerned that
the radio could be used for illegal purposes." What their exact
concerns were is anyone's guess.

Some of the initial AT-600s did have some minor CPU problems. It is
possible that Radio Shack recalled the HTX-204 because of some related
problems, but it seems unlikely. The recall does not affect future
shipments of the AT-600. There have been some minor delays on ADI's
production line, but production is proceeding at full speed.

It is not known whether Radio Shack will be reintroducing the HTX-204.

The radio mods for all ADI radios is accessible here too!

From what I read, this will fit my needs quite nicely, especially
since it can be programmed from a computer.

I have bought it at Dayton Hamvention last week.
I just love it!!! They also gave me a beta testing version of their
new software which includes a full panoramic receiver (wide-band
spectrum analyzer) . You can scan a spectrum, see the signal peaks,
then click on the peaks and you're tuned. You can even double-click
next to a peak and the software finds the closest peak itself.
The reception is also fantastic.

Cheers,
Paul

I have looked at this ICOM receiver at Hamvention before I bought
WiNRADiO at the show (for a special price :-).

The ICOM receiver is a disappointing "me too" product. For starters,
it comes in a separate box, so you still need cables to connect to
your PC. But the main problem is, because it is connected through a
(slow) RS-232 interface, the data stransfer rate makes it a
slow-scanning receiver (only 20 ch/s while WiNRADiO has 50 ch/s).
Besides, WiNRADiO software looks and feels much better.

Cheers,
Paul

A comment about Smartnet Phone Calls. Most system managers, for various reasons, set aside one or two channels on a trunk system as interconnect only (unless all other channels are busy). Listen conventionally for awhile and you will probably figure out which ones. In some IIi systems, the private call feature is determined by the controller and the actual talkgroup assigned for the private call is randomly done by the central controller. So even if the TT read the talkgroup, it is likely that it wouldn't show up again for quite some time, and would be pretty useless to monitor for additional private calls.

i saw a performance by the british artist "the scanner".
he used a scanner to scan phone-calls. i dont know anything about this
technical equipment,so my question: which phone-calls can you scan
with this things,arent they coded ?
thanx

2183. AR 8000 need repair?

Newsgroup: rec.radio.scanner
Date: 1997-05-25 00:00:00 UTC
From: Fred <cybernetic@earthlink.net>
Message-ID: <33889B1B.77C5A254@earthlink.net>
Source record: 196687

I posted this question in another place without any response, so I'll try it here:

My question is, does the BC9000XLT have a more powerful receiver than the AR8000?

I have noticed that my BC9000XLT pulls in signals much stronger than my AR8000.
I compared these two radios with the same antenna, and on the same frequency (453.1000).

I'm wondering if the BC9000 simply has a more powerful receiver, or if my AR8000
needs to be repaired. I have also noticed that the BNC antenna jack on the
AR is slightly loose, perhaps the connection inside this radio is not very good?

Thanks....

Fred Davey

I have a bc3000xlt that is only a couple months old for sale for $275.00
and I'll pay shipping & cod. It is not "modifiable" but it does pick up
cell images.

Would the frequency of a Blue Angel not be related to how tight the anus was and wether the person was standing, bent over, or sitting on a chair, and what kind of chair it was? Along with a whole bunch of other parameters? So would it not be hard to nail down an exact frequency?

2191. Re: Pittsburgh police "Channel 8"

Newsgroup: rec.radio.scanner
Date: 1997-05-25 00:00:00 UTC
From: frankn3mju@aol.com
Message-ID: <19970525221301.SAA09563@ladder02.news.aol.com>
Source record: 196695

Pittsburgh police Ch. 8 is 453.950. This Ch. is used mostly by detectives. The Ch. is also used for chit-chat about incidents that they don't want going out over the regular ch. Good channel to keep around for any major incidents. You'll hear discusions about the condition of people involved, how they are starting their investigation, who suspects may be, and other details of the incident.
Hope that helps.

From: ae826@leo.nmc.eduNOSPAM
Message-ID: <3388cef4.0@zeus.moa.net>
Source record: 196702

I have massaged my database to get a listing of past freqs from the Air Michigan Airshow. I've posted the results to a temporary website:

http://198.111.46.20/howley/airshow

These are printable pages you can take right to the airshow with you. If there are any updates, please get them to me soon, since the show is on 5/31 & 6/1. Print extra's. I always find a new scanner user out there that looks like they need help and I would appreciate if you could help them out also.

If you reply to me, remove the NOSPAM from my address before pressing send.

Tom

It is illegal here in the US to operate a ham radio, CB, scanner, other radio transceiver on a commercial flight. The reason is that the pilots are afraid that spurious signals from the transmitter or even the small amount of RF energy produced by receiver circuits could interfere with sensitive navigation equipment on commercial airliners. However, private airplanes do not have this restriction. The only restriction to private airplanes is you need to have the permission of the pilot. I also have talked to "aeronautical mobile" stations before and their range is at least twice the range of regular mobile stations.

I recently ran across a program that uses the Hamcomm interface.
I'm not sure ehat mode it decodes, it written in German and there's no
English doc's in the Zip file.

I was hoping someone who speaks german could help me out.

The URL of the software site is:

http://www.europoint.com/fmsmonitor.htm

Thanks,

I have only picked up one book so far by Bill. For someone that is new to scanning or would not know much about basic electronics, I would suggest that you find some other publication. Bill's books are very informative but they do dive in a bit more than what the novice scannist would want to right off.

The Ultimate Scanner book is great for understanding the principles of modifying scanners to improve their usability. This doesn't just apply to opening up the cellular gaps...there are other mods out there besides just cell mods!! I'm sorry that I don't have a good recommendation for a good book for someone that is a newbie.

Antenna Specialists make excellent antennas. However, 140$ does seem a
little strong!

> Obviously, since the aerial is the most important part I want to get the
> best, but I don't want some huge aerial sticking high up on my car.
> What can you suggest?

I would suggest something along the lines or a K40 or Wilson 1000. The
quality is acceptable and you should be able to snatch one for much less
than 140$.

A 102" whip mounted on one of the back corners of the truck seems to be
pretty hip around these parts. however, you'll get better overall
performance from a whip like the above-noted mounted in the center of
your roof. For best performance, you really have to drill a hole in the
roof and mount the antenna permanently. You may not like this idea but
let's face it, when you go to sell the truck a small bucket of bondo and
some touch up paint will completely conceal it. Either that or just
shove in a hole plug and hope for a short buyer. <G>

If you are concerned with being heard, you could install an outboard
power amplifier to the rig. Bear in mind this is illegal. However, the
noise is often so thick on CB that you need more than 4 watts to "make
the trip".

Cheers!

Could you provide a few examples? I'm not trying to nit-pick.. I love scanning.. but my dash consists of a 100 channel dash mount mobile, and a 30 channel hand-held.. and a cellular.. (I hate having a boring commute) .. and I've NEVER heard anything on the police bands (as of yet) that I could provide police with any spec. of information -- at least in Richmond, Virginia, USA and the 5 surrounding localities.. it all sounds highly professional and I can only say good things of it.. well.. I do hate trunked systems though :)

I can go on pretending that I know much about anything. I'm sorry, I will crawl back in the hole in which I came from. I know that I have been wasting bandwidth and aggrevating people. I have realized the my Pro-26 is a hunk of junk that is just teaming with intermod problems and is plagued with cellular images and barely outperforms a cheap dual conversion scanner. Please accept my apologies! I just wanted to have someone think that I was intelligent. I just wish that I even had a friend. Maybe I can modify my transceiver so I can say "hi" to the police.

If you like bad information.

This site proves that many people simply do not understand the difference between CART and IRL. It also proves that many people don't understand that the Indianapolis 500 is a USAC/IRL race. CART drivers and teams are not participating in this year's Indianapolis 500. CART driver and team web sites and listings of CART team/driver frequencies are pretty much useless for the Indianapolis 500.

Keep in mind that the longer the antenna (up to quarter wave), the better
it radiates. Those small heavily loaded jobs are pretty good dummy loads.
The stainless whip is the cheapest and usually best. $140 seems pretty
pricey. Gud luck. 73's W1DB

It apears that you just miss calls.
I had left out one frequency at first and after a few missed replys I
put the missing channel in. It does not alert the user or lock up.

If you have one of the scanners that Bill likes (PRO-2004, 2005, 2006, &
43 (maybe others)) there is useful info in Cheek 3. Some of the more useful
info may be available in various places on the web. Alot of what is in his
book is for people who are not afraid of tearing into their scanner. Some
mods require significant skill. The pictures of Bills scanners with wires
hanging out, meters installed, and covered in switches and LEDs are a hoot.

If your scanner has a wide FM filter, you can use that setting (as opposed to narrow FM) in order to hear spread spectrum communications. I tried it on my own phone.

You may have to adjust the frequency after the scanner has stopped in order to get the best results.

Hello.

I was wondering if you would know any information regarding to CB /
ham radio in the sky.

Are we [people in the states / Canada] allowed to transmit any signals
while we are in the airplane etc. ? Airplane = mobile ?

I know we are allowed to scan in the sky, but I am not sure about
transmitting... hams in MIR do... maybe we can do the same thing,
can't we ?

Thanks in advance :)

>designed mostly for transmitting and not for receiving.

The DISCONE antenna has been used by the Military for some time because of it's WIDE BANDWIDTH. The antenna starts out at around 100 Mhz and is good all the way to 700 Mhz. It maintains a 50 ohm impedance throughout a 7:1 Frequency range. This is good. It;s also why you can tranmit with it. This is when the impedance is most important.

I have used Radio shacks discone since they came out. The problem is the low end cutoff. The response drops off REAL FAST below around 100 Mhz. That's why this antenna sux for 30-50 Mhz.

If you get a DIAMOND antenna with the Whip on top you get better low frequency response. The only way to get some gain is KNOW WHAT FREQs you wish to Monitor. This will severely NARROW your available channels. Unless you only use a receiver to get a particular band like 2 meters or 440 460 or 800 Mhz ONLY....Forget about gain.

I have heard 1090 Mhz Transponders on Aircraft with my Discone Mhz!

I wish I had better low end response with my radio shack discone. I left it mounted on the old house we sold in November. Radio shack needs to fix that and stop selling that old ground plane antenna. Can't they find something new? Perhaps to compete with the diamond discone? I moved within 5 miles of R&L Electronics in Hamilton OH. It's quite a CANDY STORE for radio nuts.

Hi Al,

This FAQ for FRS was available at the following URL a few
months ago, but seems to have disapeared within the last
month:

http://home.navisoft.com/nspi/frs.html#Q21

Bob

The Family Radio Service (FRS) Page

Welcome to FRS News and FAQ on the World Wide Web.

Editor: Bennett Z. Kobb <bkobb@newsignals.com>
Last Update: December 24, 1996

If you use this page, let me know so I can determine whether to leave
the page on the server.

The Basics

On May 15, 1996, the FCC created the Family Radio Service (FRS) in the
462 and 467 MHz
spectrum.
FRS uses FM with maximum effective radiated power of 0.5 watt.

Click here to download a complete copy of the FRS Report and Order. This
document contains the
FCC's commentary and detailed history of the FRS proceeding, plus the
FRS Rules, in .PDF
format.

You must have the FREE Adobe Acrobat or other compatible .PDF reader to
use this file. Get the
Acrobat Reader from http://www.adobe.com. The Reader also is supplied
with many software and
hardware packages.

Click here to go directly to the FRS Rules (an HTML page). If you
downloaded the .PDF file
above, your download includes these rules.

Do not believe everything you read in these FCC materials.

The Latest

The FCC has still not acted on the FRS Petitions for Stay and Reconsideration, despite suggestions of prompt action several weeks ago. Robert McNamara, FCC Private Wireless Division Chief, has left the Commission and we don't know what priority his replacement will assign to FRS.

Meanwhile, on December 11, the FCC Laboratory established a new category of FRS radio: the FRS Base Station (FRB). No FRB units have yet been authorized for sale.

The FRS proceeding did not contemplate base stations; instead, the FCC emphasized "palm-size," "convenient to carry" portable radios. Any FRB unit would have to meet the same technical requirements as a FRS portable, especially an antenna with no gain over a dipole, and that is an "integral part of the transmitter." But the rules do not prohibit use of an external power supply.

Three more FRS radios have been authorized by the FCC Lab for sale. One is from Maxon and two are from Radio Shack.

The FRS Sport 7 and 7x radios from Motorola are now available for $119.95 and $139.95, respectively, from EEB. The 7 contains an internal channel selector; the 7x has an external selector. These are seven channel units only, apparently only on the 467 MHz channels.

This configuration makes communication with GMRS users impossible. It threatens their systems with interference, according to some accounts.

On August 2, 1996 the FCC created yet another CB service, the Low Power Radio Service (LPRS). This service is limited to certain obscure uses. You probably will never use LPRS unless you are a police officer, deaf person, ill person, or an operator of an automated maritime telecommunications network (see the revised FRS Rules using the link above).

On July 5, 1996 the Personal Radio Steering Group (PRSG) petitioned for Stay and Reconsideration of the FRS rules. The petition for stay is a request to keep the FRS from starting until after the petition for reconsideration is addressed.

The PRSG filings ask the FCC to deal with numerous unresolved issues, including more detailed prohibitions on repeaters and retransmission; copies of the FRS rules to be provided with FRS radios; and applying the same prohibitions on certain uses to FRS that are found in CB and GMRS.

Radio Shack responded on July 9, asking the FCC to deny the PRSG petition for stay. The company called the PRSG request "speculative claims" and argued that PRSG failed to make the showing of "harm" necessary in order for the FCC to issue a stay of the FRS rules. Radio Shack and Motorola later responded to the Reconsideration portion of the PRSG request, asking the FCC to deny reconsideration.

Radio Shack then asked the FCC to "strike" portions of the PRSG filings--a rare, aggressive request--and PRSG responded, but the FCC has taken no action yet.

Dr. Michael C. Trahos, a Virginia physician and radio consultant, petitioned for partial reconsideration of the FRS Order on July 3. He asked the FCC to clarify or modify 47 CFR 95.53 to allow GMRS mobile and small base stations to communicate with FRS units on their mutually authorized frequencies.

The PRSG runs a bulletin board system at 313 995 2100 and their office number is 313 MOBILE 3 (662 4533). They do not have a Web page.

It is rare for the FCC to grant petitions for reconsideration. It is almost unheard of for the FCC to grant petitions for stay. We expect the FCC to deny the PRSG petition for stay and to dismiss both petitions for reconsideration with little comment or official attention paid to these filings, unless the FCC staff feel it necessary to modify the GMRS and/or FRS rules in some innocuous way.

The Family Radio Service Frequently Asked Questions (FAQ)

The citations in brackets are from the FRS Rules, Part 95 of title 47 of the Code of Federal Regulations, Subpart B. This FAQ was written by Bennett Kobb and is not official FCC material.
Send your questions and additions to bkobb@newsignals.com.

1.What is the Family Radio Service (FRS?)
2. Where did FRS come from?

3. Is FRS "UHF CB"?
4. What are the FRS channels?
5. Do I need a license to operate an FRS unit?
6. Is my FRS radio an unlicensed Part 15 "intentional radiator"?
7. May I use my FRS radio for business communications?
8. May I use my FRS radio to communicate with a station in the General Mobile Radio Service?
9. Must I identify my FRS station or transmissions?
10. May I set my FRS radios up as a repeater station?
11. May I connect an external antenna or power amplifier to my FRS radio?
12. May I connect my FRS radio to the telephone?
13. May I broadcast music over my FRS radio?
14. May I use my FRS radio to transmit one-way paging messages?
15. May I use my FRS radio to transmit data communications?
16. May I operate my FRS radio anywhere?
17. May I transmit continuously over my FRS radio?
18. Do I need to listen to the FRS channel before I transmit?
19. Doesn't my radio monitor the channel before transmitting?
20. How much does a FRS radio cost?
21. When can I get FRS radios?

1. What is the Family Radio Service (FRS)?

FRS is a private, two-way, very short-distance voice communications service for facilitating
family and group activities [95.401(b)].

2. Where did FRS come from?

The FRS culminates more than 20 years of attempts by FCC and industry to establish a new
unlicensed personal radio service: the Class E CB and Personal Emergency Locator Transmitter
services at 220 MHz, the Personal Radio Communications Service (PRCS) at 900 MHz, the GMRS
adjunct at 902 MHz, and the Consumer Radio Service (CRS) at 460 MHz. None of those services
were ever approved by the FCC in the end.

Tandy Corporation's Radio Shack division proposed FRS to the FCC in 1994. After heavy
opposition from current spectrum users and strong support by radio manufacturers, the FCC
authorized FRS May 15, 1996.

3. Is FRS "UHF CB"?

FRS is the only "UHF CB" in the United States.

FRS is one of three Citizens Band Radio Services. The others are the Citizens Band Radio
Service at 27 MHz and the Low Power Radio Service (LPRS) at 216-217 MHz.

The General Mobile Radio Service (GMRS) is sometimes described as "the old UHF CB". That description has no legal or historical basis in fact. GMRS was formerly named Class A Citizens Radio, never Citizens Band.

LPRS, though a form of CB, only allows certain limited uses including theft tracking, auditory and health care assistance devices and control stations in maritime radio. No two-way voice communications are permitted in LPRS.

4. What are the FRS channels?

Channel (MHz)

1. 462.5625
2. 462.5875
3. 462.6125
4. 462.6375
5. 462.6625
6. 462.6875
7. 462.7125
8. 467.5625
9. 467.5875
10. 467.6125
11. 467.6375
12. 467.6625
13. 467.6875
14. 467.7125

5. Do I need a license to operate an FRS unit?

No license will be issued. You are already allowed to operate an FRS unit if you are not a representative of a foreign government, and if your authority to operate an FRS unit has not been withdrawn by the FCC, and if you comply with all FRS rules in Part 95, Subpart B-Family Radio Service (FRS).

6. Is my FRS radio an unlicensed Part 15 "intentional radiator" like a cordless phone?

No. It is a radio station in the Citizens Band Radio Service, "authorized by rule" under the Communications Act.

Unlike Part 15 intentional radiators, FRS users are subject to operator rules.

FRS manufacturers are subject to FRS technical standards found in Part 95.

7. May I use my FRS radio for business communications?

"Small businesses...may be users of this service in their business activities." (FCC Report and Order, WT Docket No. 95-102, at 20(D).

8. May I use my FRS radio to communicate with a station in the General Mobile Radio Service (GMRS)?

We interpret the GMRS and FRS rules to permit GMRS-FRS intercommunication. Others do not. The FCC has not issued any formal rule interpretations on the subject. We consider it unlikely that the FCC would take issue with GMRS and FRS users talking to each other.

(No one, however, may transmit using anything but a FCC-certified FRS radio on the 467 MHz FRS channels 8 through 14. Because those are the only channels on which current FRS radios operate, it is physically impossible for a GMRS licensee to lawfully use a GMRS radio to talk with a FRS user.

In public comments filed with the FCC, it was demonstrated that the 467 MHz FRS channels were entirely unnecessary. Indeed, to this day no one has proffered any justification for one, much less seven, 467 MHz channels to be allocated to FRS.)

You may not use your FRS radio to communicate through GMRS repeaters, or on any of the GMRS primary channels, or any channels not already built into your FCC-certified FRS radio.

9. Must I identify my FRS station or transmissions?

The FCC does not require you to identify your station or transmissions.

10. May I set my FRS radios up as a repeater station?

The FRS Rules do not expressly bar FRS repeaters.

You would have to set your radios up as a repeater station without connecting anything to the FRS radio that was not FCC-certified as part of the radio. Methods of accomplishing this aim were disclosed in the record of the FRS proceeding.

Repeater controllers, external receivers etc. are unlikely to be FCC-certified as part of the FRS radio and so could not be connected to it.

11. May I connect an external antenna or power amplifier to my FRS radio?

You may not attach any antenna, power amplifier, or other apparatus to an FRS unit that has not
been FCC certified as part of that FRS unit [95.194(c)].

A FRS antenna must be an "integral part of the transmitter" and have no gain as compared to a
half-wave dipole [95.645].

12. May I connect my FRS radio to the telephone?

No FRS unit may be interconnected to the public switched [telephone] network [95.193(c)].

13. May I broadcast music over my FRS radio?

You may only use FRS to conduct two-way voice communications with another person [95.193(a)].
Only these types of one-way communications are permitted [95.193(a)]:

* To establish communications with another person (to call them);

* To send an emergency message. The FCC defines an "emergency message" as "concerning the
immediate protection of property or the safety of someone's life";

* To provide "traveler assistance":

* To make a voice page;

* To conduct a brief test.

14. May I use my FRS radio to transmit one-way paging messages?

Yes, but only voice paging messages [95.193(a)]. You may not transmit "tone-only" pages (a
tone-only page consists of tones communicated in order to find, summon or notify someone).

15. May I use my FRS radio to transmit data communications?

Not exactly. The FRS radio may only transmit tones to make contact or continue voice
communications with a particular FRS unit. [95.193(b)]. Hooking up, for example, a packet radio
controller (TNC) to a FRS radio would be strictly forbidden even if easy to do.

16. May I operate my FRS radio anywhere?

You may operate your FRS radio in the United States and certain locations specified by the FCC
[95.192].

If you want to use FRS aboard a vessel or aircraft owned or operated by a U.S. citizen or
company, you will need permission from the captain (see 95.192(a)(1)).

However, the captain may not have authority to give you permission (for example, if FAA
regulations forbid it).

17. May I transmit continuously over my FRS radio?

You may transmit only as long as you are conducting two-way voice communications with another
person or transmitting lawful one-way communications as listed in question 13. Use of FRS
transmissions to "monitor" anyone or anything, as that word is normally used in radio (one-way
transmission) is not allowed.

18. Must I listen to the FRS channel before I transmit?

You must share the channel with other users [95.191(b)].

There is no meaningful way to share the channel with others unless you listen before
transmitting and wait until the channel is available before you transmit.

To listen to the channel, you must disable any tone squelch or other feature that can keep you
from hearing other users.

Also, you must at all times and on all FRS channels, give priority to emergency messages
[95.193(d)].

You would not be able to do this if you didn't listen for emergency messages.

19. Doesn't my radio monitor the channel before transmitting?

The FCC does not require that radios do this by themselves. No FRS unit available for sale
includes this feature.

20. How much does a FRS radio cost?

The typical price is $100-200.

21. When can I get FRS radios?

The radios are available from Radio Shack stores and major mail order radio dealers.

Check out the old Radio Electronics article on Captain Midnight. He took over HBO for a few minutes back in the 80's. It goes through the necessary power, dish size, power budget, and other stuff. I think the article is in the mid or late 80's. It can STILL be done if you have the equipment. You'd better not get caught hacking a transponder on a geosynch sat, (or any sat for that matter) or you'll be hung upside down by a certain part of your anatomy. The up side of this is that it is very difficult for them to catch you.

Won't wiring the jack to the top of the volume control pot give you
the equivalent of maximum volume and overload the tape recorder?
You may have to install a resistor in series with the jack to lower
the signal strength.

I'll bet though that you won't find two of them that know squat about
scanners.
Are there certain model # that can pick up cell freqs?

Would there be a way to get a transcript of these hearings that were held
about the scanner radios? I would write to my congressman, but I wrote to
him three years ago about getting a copy of that bill that made listening
to cordless & cellular phones illegal, & I'm still waiting.

Dave, Rat Shack can actually special order crystals for that scanner. CHeck out the 3 ring binder table that they have on special order stuff. If the sales idiot has no clue what you're talking about, (typical) you'll have to find it yourself. I just ordered some odd crystals from there. Mine were $5 each, but I think the price varies depending on how rare the crystals are.

#->the time has come for it...

I couldn't agree more - everyone here and many more will
be wanting to share their own fleet maps and codes for
every major (and minor) city in the US.

I picked up my TT this past Friday, and I think it is a
solid player and is an absolute necessity if you live
in a city like Atlanta, GA where everyone and their
brother has gone Motorla trunked.

I've worked on my list for Atlanta and have most of
the map(s) and talk-group IDs down in a file. There
are still quite a few I have not identified and will
continue to work on them for the next severl
months. I will not release my list until I've verified
them three ways from Sunday to ensure accuracy.

Anyway, having a user group specifically for owners
of the new Trunk Tracker is an outstanding idea.

>(City Council etc) because it may ruin their fun (listening, or running
>illegal ops).

Now just a Damn minute there, , , , , You cry about the City Council
not "turning loose" of money, then you attribute a reason for that
action. I was on our City Council and was Mayor of our small city. I
had to deal with the budget, and the demands of the Police Unions, and
found out that the cops were just as selfish as any other beaurocrat.
"I" come first, and nothing else matters. Even if there IS'NT any
money to be had, "I" want my raise, dammit! The one thing that burns
my butt is that most cops think they are "special", and should be
treated differently from other City employees. Yes, we need the cops.
But NO we don't need the attitude. I get this "You just don't
understand" krap from them all the time. Well, , , I DO understand. I
went to college, , , , I speak English, , , Try me! And BTW, the
listening in to police conversations doesn't even come close to
entering the equation. There are BUDGET considerations. We (on the
city council) represent the citizens and taxpayers of the community.
We try to get the most bang for the tax buck that we can. But with
the Police Unions, it just doesn't seeem to matter. If the city has,
, say , , , $100, , then the cops want $110.

BTW, I am a former cop, and my Father retired from the CHP.

Source record: 196771

Ordered a scanner 235 model from the JEFF-GUY in Indiana.

The JEFF-GUY said the unit will go out Friday and will be here in California on Saturday...next day RED.

On the appointed day at 5:32 pm I watched the UPS truck rush on by my house and not deliver the package sent by the JEFF-GUY.

The JEFF-GUY was afghast when he got my e-line telling him "it did not come" as on RED scheduled. The JEFF-GUY said he's go back to his office the next day and get me the Tracking Number and so I could track it at : http://www.ups.com.

Well, the unit never got here because the street where I live does not exist, according to the fools who work at UPS. The carefully screened people who are guardians of your purchases given the task of just "locating the zip code" and making sure if there is a ? they call the phone number included on the form filled out by the JEFF-GUY...in plain handwriting.

The street I live on does not exist...according to the UPS official "TRACKER" DIVISION ....

I guess I don't exist if I don't live where I live for over 20 years who has been accepting and getting UPS deliveries for all those years packages have been coming here. And get this: there is a house across the street who gets UPS twice a week or more. I guess he don't exist either.

Does UPS have any responsibility now to make amends for their dereliction of duty? How many news stories did I miss getting because of not having the scanner I needed to get the area so far is impossible using a generic 800 scanner?

Does UPS not at least owe a free-delivery of? No cost to me or the shipper?

I'm going to talk to a lawyer and see what he says about this.

I may be able to go to small claims and get some bucks for my inability to make money off the product I expected on Saturday and will have to argue with UPS over when I call them Monday or Tuesday, if they don't answer tomorrow?

How many others have been "you don't exist on that street" by UPS....?

And to think I once said that UPS has a good rep with me due
to no missed deliveries...there was postings a while back about
their lousy service....

Good point if only those that have posted here are involved. We're
talking about the clowns who've rigged up a radio and think it's real
cute to say, "Fuck you, pigs" on a police frequency.

You know. What you've been doing in this group.

Now, how do you know that a cop is more likely to do this? Where did
you get the information to back that up?

>
>Who are you going to blame when a fellow officer dies because of this?

Is it likely that a cop would do this? Yes. Idiots exist in a police
department. What makes you think that I would excuse it? I would love
to slap any officer who does that sort of thing. A digital system
would virtually end that (until technology finds a way around that).

The PRO-2006 will function as usual until the computer takes control. At
that
time the PRO-2006 display will go blank until the computer releases control
or you turn off your scanner and turn it back on.

> >of transmit range.
>
> You can't legally use any amp on the CB band. Anything over 5 w is not
> legal.
>
> >William Lee

Legality dosen't matter. Actual performance dosen't matter. What matters
is how can I impress my friends with the amount of money I dumped into
this crap.

These guys buy antenna gadgets for insane prices that have absolutely no
measurable effects, screw up their audio with processors and reverbs, add
in a "roger beep" that's 20 dB overmod, operate on any frequency they can
get their gear to run on, (remote control users.. TOO BAD!)

In actual fact, if the band is open, you can work the world with 5W (on 10
meters, where it's legal). If the band is closed, then no amount of power
will help. the only use for all this junk is a nightly screaming match.
Repeat
in every town out to the edge of ground wave propagation, and it's no
wonder
you can't use CB for anything useful anymore.

Back in my CB days, I used to get a lot of fun by outperforming very
expensive
base stations from a 5W mobile rig. Of course I read and understood the
ARRL antenna handbook, and actually installed my system properly..
The total cost of my antenna mod was about a nickel.

Still, they don't care what problems they cause for other users in the fire
and
police bands, ham bands, TVI.. Just as long as they can out-shout the
idiot down the street, that's what matters.

>Has anybody used the PRO-50 the latest in the RS mov'em out the door
>radios ??
>Your opinion of it ???

It was my first scanner a couple of years ago. I think it was an
excelent first scanner, especially becaues i was in a rural area, and
I didn't have much more than 20 transmitters to listen to anyway. I
only moved up to my current (PRO-29) because I moved to a larger city.

I'd deffinately call it a starter though. I don't think anybody would
want it after they've been scanning for a while.

The list of CB Shops is finally available for your shopping & repair
needs
all over the nation.
CB Shops listed from East to West and North to South are available
and
ready to address your needs. Some carry hard to find equipment, and

some carry wholesale parts & equipment.
Whether it's a brand new radio or an old tube type amplifier, your
chances
of finding what you need are much greater and faster with this
brochure.

This brochure is loaded with names, addresses, and telephone #'s
of
different shops, shacks, and even, shops on wheels.

This brochure will pay for itself with the time it will save you
in searching
for that one shop that can accommodate your specific needs.

Here's how to get your copy of this, fast selling ,
brochure.....

Send $2.00 cash, .32cent stamp , and of course, your snail mail
address
to.....
(please include your e-mail address)
TEAMWIN 01
P.O. Box 0583
Loveland, CO. 80539-0583

Thank you and 73's from Colorado.....

This thing about the JEFF-GUY...gosh!

Let me tell you something about this purveyor of
radio-mania-stuff. Who would want to deal with this
JEFF-GUY anyway? How can you justify dealing with the
JEFF-GUY when all he does is take your order on the phone
after he has the real thing to send you? And then he is
being open and true when he says: "i don't know when the next
shipment is coming in".... can you belive that? Is this a
portend of things to come?

Let me tell you this: and then he charges me just 299 for RED
UPS overnight delivered? That's to California. Hey, are you
listening people? They are in stock. The JEFF-GUY said they
were and they were shipped yesterday and if I don't get the
unit today i'll have to wait till Tuesday. Sometimes UPS don't
always deliver the next day.

But the JEFF-GUY deserves a good deal of MORE BUSINESS. He's so damn honest. What is this world coming to with people like the JEFF-GUY taking our money and delivering the product for a good price?

I'll bet if any mistakes are made he'll make good too. It happens. I'll bet this guy will go out of his way to correct any mistakes along the way. Just because....

FYI

The thing is that any radio that can listen in on any kind of radio phone is illegal in the US. The dumb thing you and I did was to go to our local Rip-Off Shack to by one of these disabled radios from them. Anything sold in the USA will not have cellular coverage if it is to be sold legally. The thing to do is buy a scanner that was made in Europe or Asia or Japan...and make sure that it's done discretely!!!

: Greetings,
: I bought the Message Tracker Pro for decoding Pocsag and it works
: great. However, I have an old 486/66 and another scanner and wanted
: to run the program off that too. However using a serial interface
: demodulator from http://www.pervisell.com connected to my other scanner's
: speaker output jack, shows no signal on my Message Tracker Pro software.
: Using the serial interface cable that came with my Message Tracker Pro
: works OK on both computers. Anyone been sucessful running MT-PRO on other
: than the manufacter's interface cable, or do I have to spend another $240. for
: the SAME program on my other computer. I assume it's a software problem as the
: demodulator from Pervisell runs the PD203 Pocsag decoding program OK, that's
: been floating around the Net.
: Bruce
:

The MT interface is DIFFERENT than the pervisell/PD one.
MT uses a DUAL op-amp, and the software expects certain lines to be at
certain levels-the PD one does not match.
I'm not sure about the NEW interface, but the standard MT interface
(SIA-100), is not that difficult to clone.
A hint:the screws are superglued in on both ends....a drop of acetone(or
nail polish remover) will soften the glue, and allow the screws to be
removed without damaging anything.
Don't get the acetone on other parts of the plug shell...it will mar the
plastic.

2294. R10 cloning software data format decoded

Newsgroup: rec.radio.scanner
Date: 1997-05-25 00:00:00 UTC
From: baptpdc@netcom.com
Message-ID: <3387fdb4.113654006@news.flash.net>
Source record: 196825

Icom CSR10 cloning software ".ICF" datafile format decoded.

The .ICF data files produced by Icom's software is not very well encrypted. It is a simple substitution method.
There does not seem to be any checksum data, at least not on a per line basis, so it should be fairly easy to manipulate the data with an external program and feed it back into the CSR10 software. (At least until we finish figuring out the cloning commands. Then someone (don't look at me...) can program some nice drag and drop programming software for the R10.)

To get at the real data that is sent via CI-V commands to program the radio, follow this procedure:

1)Read one line of .ICF data.
2)Strip the CR/LF at the end.
3)Determine if the raw data is already readable. (Only a first two lines are like this.)
4)If not, subtract 55 from each character in the line. (ie: 'g'='0'=0x30, 'h'='1'=0x31, 'i'='2'=0x32, etc.)

The first six characters of each line are some sort of header data consisting of 3 two character hex numbers. The representation is in ASCII. (ie: 15 is represented by '0F' = two bytes, ASCII characters '0' and 'F')
The first two bytes are a 16 bit counter that is incremented by 32 on each successive line. There are 64 characters per line / 2 characters per byte.
The third byte always seems to be a '20'.

The rest of the data in the line is what is sent during cloning operations. The .ICF datafiles do not have the CI-V command framing, it's data only. The CI-V cloning commands can be grabbed by tapping off the RS232 when you clone the R10. That's a different project that is simultaneously underway.

I have a program that displays each line of the .ICF datafile in various display formats. Email me if you want it. Source code is available also.

Channels are layed out in linear form, 0-999, no bank information is in the datafile other than labels.
A few lines have mixed data in them. They do not all finish a data set at the end of a line.

So far, the .ICF datafile format look like:

Line Contents
001 Cloning initialization code
002 User comment field
003-127 Channel Frequency data
128-130 Unknown
131-380 Channel Label Data
381-386 Unknown
387-391 Program Scan Edge Frequency Data
392-393 Easy Bank Frequency Data
394-399 Auto Mode Frequency Data
400-402 Unknown
403-412 Program Scan Edge Label Data
413-418 Unknown
419-427 Bank Label Data
428-434 Unknown
435-453 Unknown
454-476 Unknown
477 Radio ID Field
478-497 Unknown
498 Priority Frequency Data
499 VFO Frequency Data
500-505 Unknown
506 User Comment Field, ID Field

Eventually, I'll figure out the unknowns, but if anyone wants to hack around in their .ICF files to help figure this out, it might go a little faster.

If what you hear is just the metallic "Donald Duck" sound, then it is
frequency inversion, easily reconstructed as per previous posts.
If you also hear a loud "knocking" sound several times per second,
then this is frequency inversion with a constantly changing basepoint.
Such a system is manufactured by Transcrypt in Lincoln Nebraska.
Reconstructing the speech is not a trivial matter. With a fast
mainframe, expensive programming, and a time intensive application, it
MAY be possible. But not in real time.

Well Peter, you have a real dilemma on your hands. The best mobile antenna
for CB would be a 9 foot whip mounted on the roof. Anything else is a
compromise. Some people mount this stainless steel whip on their back
bumper to reduce the overall highth. The Wilson K-40 antenna is a good
choice as it is shorter but still very effective. Of course you can use a
shorter antenna and a small (25-50W) R.F. amplifier to make up for the loss
of transmit range. Do not go overboard on the amp as you can not talk to
someone you cannot hear. Good luck in your quest for the ultimate signal
from your mobile. Let us know what you come up with as we mobilers are
always looking for a better antenna.

Hi Group!!

I am in the process of adding an DTMF interface card that can be used with the gameport connector (db-25) instead of the parallel printer connector (db-25).

The program is not completed, except for the dos version, but I have placed the schematic at the web site:

http://members.aol.com/pdrunen

It also has the proven decoder that connects to the printer port. We are also going to add an COM port interface.

If you want to be on the list for the updated demo, you can give me an e-mail at pdrunen@aol.com.

Thanks again for all the postive feedback on the project.

Paul

NOPE...I disagree. This newsgroup is for radio and scanner related
discussions. Adding an additional newsgroup would confuse things and
only cause messages to be duplicated.

Its just advertising for Uniden and I don't think its necessary. If it
where then how about Motorola? Many of us use Commercial radios to
scan with. Or radio shack or how about radio mods?

The discussion of trunked radio systems should be of interest to all
of us and subjects related to trunked system is of interest to just
about everyone in this newsgroups. Thus my vote would be against
it.

Just my two cents worth.

To add to the previous, Cheek's information is carefully researched and very credible, but it's set up such that you need more than one book/newsletter to get the complete story on any given scanner (read: dollars).

I don't fault the guy for wanting to earn a living, and Cheek certainly deserves to get whatever he can for his material, but I sense a lot of greed on his part. I've looked through his bibliography; to get all he has ever written about my PRO43 and PRO2006, I'd have to spend well over $100.

With a little homework, you could find other resources for a lot less money.

No biggie. Just my opinion.

Charlie

You'll never get a 2006 for the money you're offering, at least not from a seller who knows anything about scanners. Those things are like gold. Here in the midwest they run about $375, when you can find one.

2314. Money Order FRAUD//REWARD BEWARE OF KEITH MC CLURE

Newsgroup: rec.radio.scanner
Date: 1997-05-26 00:00:00 UTC
From: TrunkTracker@webtv.net
Message-ID: <5md5rm$ah4$1@newsd-199.bryant.webtv.net>
Source record: 196545
Cross-posted to: rec.radio.swap,rec.radio.scanner

Hello All,

Here are the facts...

His name is Keith Mc Clure...

His internet address/account was changed and or recently cancelled. His address WAS:

kmcclure@quik.com

Mr. Mc Clure lives at 1900 Willow Creek Drive, Apt. 107
Austin, Texas 78741
Tel: (512) 657-7652 (Current For Now)

On April 10, 1997, Mr. Mc Clure responded to my add for an "AOR AR8000 UNBLOCKED FOR SALE". We verbally agreed by telephone to the price of $550.00, excluding shipping costs.

The AOR AR 8000 was shipped via UPS on 4/11/97. It was also insured for $600.00. The method of payment utilized in this transaction was "MONEY ORDER". The radio was accepted and signed for by Mr. Mc Clure.

On April 25, 1997, I received 2 money orders totaling $550.00. They were electronically dated...catch this...4/30/97.

On May 6, my financial institution informed me by mail (and included these money orders) that these 2 money orders were RETURNED/UNPAID.....worthless!

These money orders were purchased from the "THE MONEY BOX" of Austin Texas... a money order purchasing establishment which utilizes NORWEST BANK
for Payment Purposes.

I recently spoke to the Customer Service division of Integrated Payment Systems, which provides these money orders to the Money Box. They said that because of the post-dating of the money orders, they were in fact FRAUDULANT. They also advised me that they could not provide me any further information or assistance!

Shortly after receiving and depositing these fraudulant money orders...MY FATHER DIED... and that meant being away from my family in Orlando, FL, thus spending 11 days in Lancaster PA.

I contacted Mr. Mc Clure via his voicemail at the above number...On May 13, 1997. I advised him that I wanted the AOR AR-8000 returned ASAP.

Well, As of today, no response.

I AM OFFERING A $250 CASH reward to anyone who can FIND THIS MOTHERFUCKER, (and even if you have to beat the piss out of him), have my AOR-AR8000 SCANNER RETURNED/
OR MY MONIES PAID!

Please keep your remarks limited to the scope of "topic relevance", I feel bad enough as it is! I lost my AOR AR-8000 and MY DAD in 2 weeks!!!

Thanks All,

Good luck with this one!

Joe

> mods/improvements that can be done to this rig?

Hi Chester,

The old Regency K-100, K-500 and M-400 scanners can be
programmed beyond the frequency ranges that it was
designed for. This can be accomplished by pressing
the decimal point before entering the frequency.

The K-100 had a frequency ranges 30 - 54 Mhz
144 - 172 Mhz
440 - 512 Mhz

If you want to program it for a frequency in the
406 - 420 Mhz range, you can do the following:

MANUAL PROGRAM .406.8250 ENTER

It is all the NSCAR buffs that buy them for the races to
save the $30 rental fee and then return them to retail
store. I went to a NSCAR race at the Atlanta Speedway and
was amazed at the popularity of these scanners for
listening to the race cars and pit crews. Some people
even had dual headphones so their mate could listen also.

Bill didn't release the books all at once. They were released as new
information was
discovered. Some mods improve on others and new ones are introduced.
Have you ever read a
science fiction novel and had many sequels. Or how about the movies
with the sequels. Do
you fault Steven King.

All,
I have a Bearcat BC-210, 1978 vintage and I seem to remember hearing that there are certain keyboard mods that you can enter to make it go outside its frequency range. The bands are 30 - 50 MHz, 146 - 174, and 416 - 512 MHz. Doesn't anybody know of any keys to press so I can go outside those ranges?

A side note, I also have a BC-101 where I was able to receive VHF-TV channel 9's (Steubenville, Ohio) on 179.75 MHz on it.

Obviously you don't want to have secure communications over the phone.

I have a right to expect at least a law that encourages enforcement of

current regulations. Are you suggesting that at the start of each

call that I take the time to read a disclaimer to the individual on

the other end?. I think not. The simple solution is to remove
800MHZ

capability from all scanners. This can be done when radios are

returned to service. It won't get them all, but it may get the one

used to intercept my conversation.

I agree with you to an extent, BUT (this is just my opinion) Let's
do more Gov. control. Yea, next it will be Books, then Tv, then where you
can visit, and maybe if we are lucky it will be where we can go and what
time of day.

just a thought. I'm not a freedom fighter, but we can do this without all
the gov control. by forcing the makers to get the phones more secure in
the first place.

Again, Just a thought.

Tim

> A LOT of short range radio interference.

Actually, they don't. Not as a rule. Monitors can emit a bunch of
hash and junk, but the newer ones are better shielded.

> But I guess that Winradio does work because some people like it...

Sure it works. Even for "dirty" computer sustems, if you use good
shielded coax cable and get the antenna out of the nearfield of the
computers and monitors, the noise is either non-existent or tolerable.

WinRadio is a shielded compartment on a PC card. All the lines to and
from the explansion slot are bypassed and filtered. Any computer
noise cannot enter the radio as a rule.

There is a lot of myth about computers and noise....some of it
justified by old practices and ways of doing things. But the old ways
are long gone and new ways are here. Modern computers are pretty
clean. And WinRadio does a pretty great job.

And.......ICOM is coming out with a computer radio, so that says a
lot right there.

I checked out the Circuit City store just down the road from me and
they said they don't sell scanners anymore.

HIGH PERFORMANCE S-METER
FOR THE PRO-2006/5/4/3/2;-2035/2042
PRO-2027/2024/2022/2021/2020
PRO-62/44/43/39/37/36/34/32
and possibly other scanners with the 108-136 MHz Aero Band

==========

This article/file is for the public benefit.

(c) 1995-97 <All Rights Reserved> Bill Cheek-COMMtronics Engineering

This article/file is for personal use only and may NOT be placed on a
CD-ROM nor any other media that conveys, stores, or transports for
any monetary cost, without expressed permission of the author. This
article/file can only be given away, absolutely free of charge.

-Bill Cheek-

==========
PRELIMINARY NOTE: This article is self-contained and you really don't need
any other supporting materials other than the service manual for your
scanner. Bear in mind, however, that only so much detail can be in an ASCII
text file like this. If you want more detail than offered here, a hard-copy
laser printed version of this article, complete with professionally rendered
graphics (six of 'em!) is available for US$5.00, ppd. See my signature box
at the end of this article for addresses, phone numbers, etc.
==========

Many scanners are capable of supporting an easy to build and install
S-Meter! All Realistic scanners made by GRE-Japan with the civilian aero
band, 108-136 MHz, apparently can support this low cost, high performance
S-Meter modification.

It takes special circuitry for a scanner to receive Amplitude Modulated (AM)
signals because AM is an uncommon mode in the VHF/UHF spectrum. In fact, AM
is used pretty much exclusively for civilian aircraft comms on 108-136 MHz
and military aero comms on 225-400 MHz. Most scanner signals are Narrow FM
(NFM). Wide FM (WFM) is used in the FM Broadcast band, 88-108 MHz, TV audio
signals; and studio-transmitter-links. Everything else is pretty much NFM.

Therefore, most scanners are designed strictly with NFM in mind, and will
not have either AM or WFM capability except as a costlier extra feature.
That's why you pay more for scanners that have the civilian aero band, and
more still for those with the military aero band.

If your Realistic scanner has the AM mode, and it will, if it has the civilian aero band, then chances are good that we can take advantage of its extra circuitry to add the simple, low cost S-metering function.

Scanners known or strongly thought to be capable of this easy S-Meter mod include the following listed in Table 1:

TABLE 1: COMPATIBLE SCANNERS FOR THIS S-METER MOD

PRO-2042 PRO-2027 PRO-43
PRO-2035 PRO-2024 PRO-39
PRO-2006 PRO-2022 PRO-37
PRO-2005 PRO-2021 PRO-36
PRO-2004 PRO-2020 PRO-34
PRO-2003 PRO-62 PRO-32
PRO-2002 PRO-44

CAVEAT: Radio Shack had many of its later scanners made by Uniden, the design of which leaves so much to be desired that this version of the S-Meter is probably not feasible. There are other alternatives but are beyond the scope of this document.

If your scanner is not listed in Table 1, the best way to determine applicability of this procedure to your scanner is to review the main schematic diagram for your receiver section, and compare it to the circuit of IC-2, Q-12, Q-13, and D-33 of the PRO-2006. This circuit is used in all the above compatible scanners, and is required for this version of my S-Meter mod. Specifically, you will look for the NFM chip and AM diode shown in Table 2 further below.

The AM section of the PRO-2006 is almost identical to the AM circuits for the scanners listed in Table 1. Each of these scanners takes its AM signal from the output of the 455 kHz IF filter that's attached to the NFM Discriminator chip. Part of the IF signal goes back into the NFM chip for NFM signals as needed. The other leg of this "Y" is that part of the signal that goes on to a separate AM processor. The key thing here is that both circuits are used full time. Special switch circuits do the controlling of which mode is actually in use, but the circuits are on full-time. That's why we are able to use the AM circuit to power our S-Meter

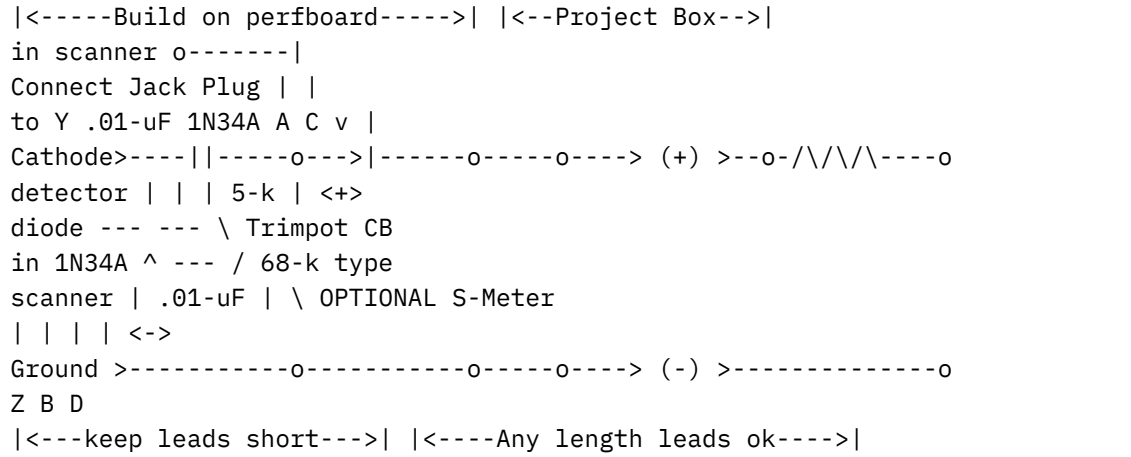
The key point here is that you must identify and use the cathode of the AM Detector Diode as the pickoff point for your S-Meter signal. If your scanner is capable of this mod, it will have an AM circuit almost identical to that of the PRO-2006. Find it, and then locate the AM detector diode. The diode's banded end is the cathode where the S-Meter signal will be tapped.

For base scanners, build the simple circuit in Fig-1 on a bit of perfboard. For handheld scanners where space is at a premium, it may be best to not use a board, and just build the circuit of Fig-1 directly into the scanner, part by part. Start by soldering C1 to the cathode of the AM detector diode, and the anode of D1 to a handy ground. Then build the rest of the circuit around those two components. Following is Fig-1, the schematic of the S-Meter

circuit.

Build the following simple circuit left of Points A and B on a piece
of perfboard. The circuit to the right of A and B is optional,
explained further below.

FIGURE 1: SCHEMATIC DIAGRAMS



THE PARTS: Radio Shack stocks the parts shown in Fig-1 except for the
S-Meter. Diodes must be germanium, 1N34A or 1N60. Capacitors should be
ceramic disks. Resistor (56k-100k) and trim-pot (3k-10k) are not critical.
The circuit of Fig-1 must be as shown. If you use an external CB-type
S-meter, so much the better....just build the meter of choice into an
attractive or functional project box with a cable of any length from the box
to Points C and D which should be wired to a male phono plug of some sort.

Most any analog CB-type S-Meter is ideal for this project, but the larger
the face, the more readable it will be. There are thousands of junked CB
rigs all over the planet, and most any CB or radio shop will have a bin full
of them. The cost of a salvaged S-Meter should be negligible.

The scanner should have a mating female jack connected to Points A & B,
installed in an out-of-the-way place for the plug from the external meter.

Connect Point Y of the S-Meter circuit via a very short wire to the cathode
of:

TABLE 2: CONNECTION POINTS IN VARIOUS SCANNERS

SCANNER	DIODE	AM -near- NFM CHIP
PRO-2042:	D-34	TK-10420
PRO-2035:	D-34	TK-10420
PRO-2006:	D-33	TK-10420
PRO-2005:	D-33	TK-10420
PRO-2004:	D-31	TK-10420
PRO-2003:	D-122	MC-3357P
PRO-2002:	D-119	MC-3357P
PRO-2027:	D-24	MC-3361N

PRO-2024: D-24 MC-3361N
PRO-2022: D-29 MC-3361N
PRO-2021: D-24 TK-10420
PRO-2020: D-120 MC-3357P
PRO-62: D-302 MC-3361N
PRO-44: D-202 MC-3361N
PRO-43: D-302 TK-10420 or 7
PRO-39 D-202 MC-3361N
PRO-37: D-122 TK-10420
PRO-36: D-114 TK-10420
PRO-34: D-117 TK-10420
PRO-32: D-122 TK-10420

Keep the Point Y lead length very short, not more than an inch.

Connect Point Z to scanner PCB or chassis ground and keep that lead short, not more than 1 inch.

Other Scanners: This mod may work with other scanners that have the civilian aero band of 108-136 MHz. If your scanner has 108-136 MHz and is not listed above, then find the last 455 kHz IF section, and locate the AM detector. Connect Point Y to the cathode or IF-side of the AM detector.

==========

NOTE: While this mod probably won't work with Uniden scanners nor Radio Shack scanners made by Uniden, a little R&D and experimenting on a Uniden aero-band scanner could prove successful. I don't own any Uniden scanners, but can assist you in your R&D if and only if you and I both have a copy of the service manual for your scanner. Contact me by e-mail if interested.

==========

WRAP-UP DETAILS: Points A and B are the metering points where any DC voltmeter can be used. S-Meter signal range will be about 0-1v. The circuit of C and D is an optional CB type S-Meter, and should be used external to the scanner. Therefore, it is ideal to wire A and B (length not critical) to a phono jack on the rear panel of the scanner for easy connection of the external meter. Use 1/8" or RCA phone jacks for base scanners and 3/32" submini phone jacks for handhelds.

METER CALIBRATION: Any DC voltmeter can be used directly at A and B including a bargraph LED display. If an external S-meter circuit is desired, then wire it as shown. Use a walkie talkie or other transmitter to send a strong signal into the scanner, and adjust the 5-k trimpot so that the meter reads exactly full scale. All other signals will then read proportionally lower. Too cool for words!

METER LIGHTING: You can embellish your S-Meter with a small pilot lamp behind it to illuminate the face. Many CB meters have such a lamp built into the body of the meter. You may have to tap 12-volts or other power from the scanner for the lamp, or provide external power, like for handhelds.

SUPPORT: I cannot and do not supply S-meters. I can provide other parts including printed circuit boards, assembled or as a kit. I will provide technical support of this project on the public network forums and/or by e-mail; never by phone. See the beginning of this article if you need a hard copy version of this article.

MOD BOARD INSTALLATION HINTS: Most modification circuit boards really need no special effort in the mechanical installation. I used to use fancy standoffs, bushings, and machine screws, nuts, and bolts, but no more, considering all my mods!

Now I loop a stiff #18-ga copper wire (RS# 278-1217) through a pair of ground holes in my perfboard or printed circuit; solder it securely to the board; and then solder it to a ground on the main board.

I solder the #18-ga wire to a chassis sidewall, or in some cases, to a ground foil on the main receiver board. This mount is rigid, safe, and easy, not only to install, but also to remove if needed. A "glop" of hot-glue on the bottom of the mod board prevents accidental shorts below it.

Enjoy S-metering at its finest!

As they should have. It was not long ago that the common attitude
towards radio was that if you did not want to be heard, you were
responsible for encoding your signal, but with the cellular lobbyists
having big bucks to bribe congress with, we the citizens lost out again.
What a shame.

Yes, but you dont understand, the whole idea is government control of
your life! (Im joking, I know you know this), so bow down and worship
washington, or else!
Soon, what with all the new laws attempting to control the public, we
will all be criminals! haha!

professionally rendered graphics (six of 'em!) is available for
US$5.00, ppd. See my signature box at the end of this article for
addresses, phone numbers, etc.
==========

Many scanners are capable of supporting an easy to build and install
S-Meter! All Realistic scanners made by GRE-Japan with the civilian
aero band, 108-136 MHz, apparently can support this low cost, high
performance S-Meter modification.

It takes special circuitry for a scanner to receive Amplitude
Modulated (AM) signals because AM is an uncommon mode in the VHF/UHF
spectrum. In fact, AM is used pretty much exclusively for civilian
aircraft comms on 108-136 MHz and military aero comms on 225-400 MHz.
Most scanner signals are Narrow FM (NFM). Wide FM (WFM) is used in
the FM Broadcast band, 88-108 MHz, TV audio signals; and
studio-transmitter-links. Everything else is pretty much NFM.

Therefore, most scanners are designed strictly with NFM in mind, and
will not have either AM or WFM capability except as a costlier extra
feature. That's why you pay more for scanners that have the civilian

aero band, and more still for those with the military aero band.

If your Realistic scanner has the AM mode, and it will, if it has the civilian aero band, then chances are good that we can take advantage of its extra circuitry to add the simple, low cost S-metering function.

Scanners known or strongly thought to be capable of this easy S-Meter mod include the following listed in Table 1:

TABLE 1: COMPATIBLE SCANNERS FOR THIS S-METER MOD

PRO-2042 PRO-2027 PRO-43
PRO-2035 PRO-2024 PRO-39
PRO-2006 PRO-2022 PRO-37
PRO-2005 PRO-2021 PRO-36
PRO-2004 PRO-2020 PRO-34
PRO-2003 PRO-62 PRO-32
PRO-2002 PRO-44

CAVEAT: Radio Shack had many of its later scanners made by Uniden, the design of which leaves so much to be desired that this version of the S-Meter is probably not feasible. There are other alternatives but are beyond the scope of this document.

If your scanner is not listed in Table 1, the best way to determine applicability of this procedure to your scanner is to review the main schematic diagram for your receiver section, and compare it to the circuit of IC-2, Q-12, Q-13, and D-33 of the PRO-2006. This circuit is used in all the above compatible scanners, and is required for this version of my S-Meter mod. Specifically, you will look for the NFM chip and AM diode shown in Table 2 further below.

The AM section of the PRO-2006 is almost identical to the AM circuits for the scanners listed in Table 1. Each of these scanners takes its AM signal from the output of the 455 kHz IF filter that's attached to the NFM Discriminator chip. Part of the IF signal goes back into the NFM chip for NFM signals as needed. The other leg of this "Y" is that part of the signal that goes on to a separate AM processor. The key thing here is that both circuits are used full time. Special switch circuits do the controlling of which mode is actually in use, but the circuits are on full-time. That's why we are able to use the AM circuit to power our S-Meter

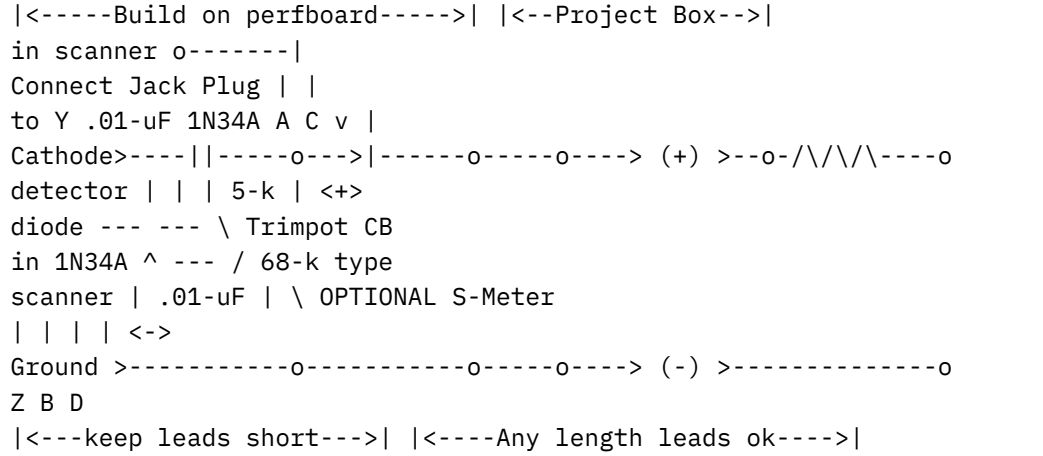
The key point here is that you must identify and use the cathode of the AM Detector Diode as the pickoff point for your S-Meter signal. If your scanner is capable of this mod, it will have an AM circuit almost identical to that of the PRO-2006. Find it, and then locate the AM detector diode. The diode's banded end is the cathode where the S-Meter signal will be tapped.

For base scanners, build the simple circuit in Fig-1 on a bit of perfboard. For handheld scanners where space is at a premium, it may

be best to not use a board, and just build the circuit of Fig-1 directly into the scanner, part by part. Start by soldering C1 to the cathode of the AM detector diode, and the anode of D1 to a handy ground. Then build the rest of the circuit around those two components. Following is Fig-1, the schematic of the S-Meter circuit.

Build the following simple circuit left of Points A and B on a piece of perfboard. The circuit to the right of A and B is optional, explained further below.

FIGURE 1: SCHEMATIC DIAGRAMS



THE PARTS: Radio Shack stocks the parts shown in Fig-1 except for the S-Meter. Diodes must be germanium, 1N34A or 1N60. Capacitors should be ceramic disks. Resistor (56k-100k) and trim-pot (3k-10k) are not critical. The circuit of Fig-1 must be as shown. If you use an external CB-type S-meter, so much the better....just build the meter of choice into an attractive or functional project box with a cable of any length from the box to Points C and D which should be wired to a male phono plug of some sort.

Most any analog CB-type S-Meter is ideal for this project, but the larger the face, the more readable it will be. There are thousands of junked CB rigs all over the planet, and most any CB or radio shop will have a bin full of them. The cost of a salvaged S-Meter should be negligible.

The scanner should have a mating female jack connected to Points A & B, installed in an out-of-the-way place for the plug from the external meter.

Connect Point Y of the S-Meter circuit via a very short wire to the cathode of:

TABLE 2: CONNECTION POINTS IN VARIOUS SCANNERS

SCANNER	AM DIODE	-near- NFM CHIP
PRO-2042:	D-34	TK-10420

PRO-2035: D-34 TK-10420
PRO-2006: D-33 TK-10420
PRO-2005: D-33 TK-10420
PRO-2004: D-31 TK-10420
PRO-2003: D-122 MC-3357P
PRO-2002: D-119 MC-3357P
PRO-2027: D-24 MC-3361N
PRO-2024: D-24 MC-3361N
PRO-2022: D-29 MC-3361N
PRO-2021: D-24 TK-10420
PRO-2020: D-120 MC-3357P
PRO-62: D-302 MC-3361N
PRO-44: D-202 MC-3361N
PRO-43: D-302 TK-10420 or 7
PRO-39 D-202 MC-3361N
PRO-37: D-122 TK-10420
PRO-36: D-114 TK-10420
PRO-34: D-117 TK-10420
PRO-32: D-122 TK-10420

Keep the Point Y lead length very short, not more than an inch.

Connect Point Z to scanner PCB or chassis ground and keep that lead short, not more than 1 inch.

Other Scanners: This mod may work with other scanners that have the civilian aero band of 108-136 MHz. If your scanner has 108-136 MHz and is not listed above, then find the last 455 kHz IF section, and locate the AM detector. Connect Point Y to the cathode or IF-side of the AM detector.

==========

NOTE: While this mod probably won't work with Uniden scanners nor Radio Shack scanners made by Uniden, a little R&D and experimenting on a Uniden aero-band scanner could prove successful. I don't own any Uniden scanners, but can assist you in your R&D if and only if you and I both have a copy of the service manual for your scanner. Contact me by e-mail if interested.

==========

WRAP-UP DETAILS: Points A and B are the metering points where any DC voltmeter can be used. S-Meter signal range will be about 0-1v. The circuit of C and D is an optional CB type S-Meter, and should be used external to the scanner. Therefore, it is ideal to wire A and B (length not critical) to a phono jack on the rear panel of the scanner for easy connection of the external meter. Use 1/8" or RCA phone jacks for base scanners and 3/32" submini phone jacks for handhelds.

METER CALIBRATION: Any DC voltmeter can be used directly at A and B including a bargraph LED display. If an external S-meter circuit is desired, then wire it as shown. Use a walkie talkie or other transmitter to send a strong signal into the scanner, and adjust the

5-k trimpot so that the meter reads exactly full scale. All other signals will then read proportionally lower. Too cool for words!

METER LIGHTING: You can embellish your S-Meter with a small pilot lamp behind it to illuminate the face. Many CB meters have such a lamp built into the body of the meter. You may have to tap 12-volts or other power from the scanner for the lamp, or provide external power, like for handhelds.

SUPPORT: I cannot and do not supply S-meters. I can provide other parts including printed circuit boards, assembled or as a kit. I will provide technical support of this project on the public network forums and/or by e-mail; never by phone. See the beginning of this article if you need a hard copy version of this article.

MOD BOARD INSTALLATION HINTS: Most modification circuit boards really need no special effort in the mechanical installation. I used to use fancy standoffs, bushings, and machine screws, nuts, and bolts, but no more, considering all my mods!

Now I loop a stiff #18-ga copper wire (RS# 278-1217) through a pair of ground holes in my perfboard or printed circuit; solder it securely to the board; and then solder it to a ground on the main board.

I solder the #18-ga wire to a chassis sidewall, or in some cases, to a ground foil on the main receiver board. This mount is rigid, safe, and easy, not only to install, but also to remove if needed. A "glop" of hot-glue on the bottom of the mod board prevents accidental shorts below it.

Enjoy S-metering at its finest!

Has anyone had any experience with the new FRS radios from
Motorola? I've been thinking about using them about the house
and for camping. I do a lot of cabling through attics for myself,
friends and relatives. It would be much better than trying to
yell down to people on the ground.

Thanks...

I used to have good luck with a 5/8 wave "Firestick" top loaded coil type- they've got them as short as 2 ft long, which work very well even at highway speeds with a 6 inch mag mount set- can get both of these at your friendly neighborhood truck stop for a total of about $20! Also works great as a scanner antenna.....but not so hot on 2 M!

I ordered in mid-March. Have called every two weeks since mid-April. Dolt (although she is a nice dolt) on the other end of the phone simply reads from her script, "the are due in mid-May" to which I replied "Yes, and it is mid-May" and she said "That's all I know." On another note, I just got my Visa statement that cycled on the 21st, and there was no charge from Scannerworld yet. Obviously, they don't have it. I'll post as soon as I get mine from Scannerwold, and hope others will do the same. Can't wait to get going on it.

Hello OM,
I am a Tech no-coder (4 yrs.) and I hope to learn the code one day, but I'm not learning it to work CW on HF because working DX on HF can be done on phone very easily. I have had several CW contacts via the computer on VHF/UHF, although none on HF because I'm restricted.There are thousands HFer's that can't copy 5 WPM. I have met many of them and they could care less about CW. They only learned (bought) it so they talk on HF not send/copy code. So why should it be requirement, it's not much of a filter for bad or under skilled operators. Turn your rig on a listen to 75M. Remember it's supposed to be a HOBBY. I forgot the license end is all POLITICAL.

I am not against CW it does serve a purpose (and I wish I knew CW) but as far requirements to use HF phone bands I can't see any purpose. Remember I'm just a No-Coder so what do I know, just ask the guys with higher class ticket. 73 de N8ZJN Kevin

I don't include my ham call because I'm flaunting it, I include it for
identification purposes in radio related groups. In other groups, I
use another sig, and seldom mention that I'm a ham. I don't include
any editorial comments in my sig here, either. I still don't see why
anyone would be proud to advertise ignorance, sloth, or indifference.

As for what you're missing by not being a ham, that's something that
you'll never know, because of your bigotry.

SURPRISING INFORMATION REVEALED IN TEST OF NEW FRS RADIOS
by Bob Leef, Crest REACT Unit 1

==========
(C) Copyright 1997, Bob Leef. All rights reserved. Please
contact the author at bob.leef@atdbbs.com for permission
to reprint. There will be no hassle - I'd just like to
have a copy of any publication is appears in!
==========

Always on the cutting edge of developments, Crest REACT is among the first to examine and report on the new Family Radio Service handheld models that are beginning to appear.

The miniature two-ways are currently being made by Motorola, Midland, Maxon, Radio Shack, Cobra, and Alinco. Operating on simplex with seven frequencies at 462.xxxx MHz and seven at 467.xxxx MHz, they are limited to 1/2-watt or less EPR - usable only for a mile or so (in theory). However, the alarming news is how some of these units interfere with repeaters far beyond their planned range. Details later.

The good news: lack of required licensing, uncluttered frequencies (at least for now), and a starting price of about $200. per pair (if you shop carefully). These facts, and their physical size of about 8" to the top of the antenna, will be attractive to some users.

Our test radios were a pair of Radio Shack 21-1808 (FRS-108) and a pair of Midland 75-510 HTs. Both models had all fourteen frequencies. The Radio Shack units did not have CTCSS.

Audio quality of both brands was acceptable, but speaker output could be a problem in a situation with any moderate level of noise. Advertisements mention that one suggested use is in a shopping mall...we wonder if the caller will be heard in that environment.

Our maximum distance tests showed: open area, 1.5 miles; car-to-car, 2/3 mile; inside buildings, less than .5 mile. Other observations - The Midland's battery door fastener is flimsy, and may break easily, although the radio itself appears sturdy.

The Radio Shack unit lacks a belt clip, but is less than 5" tall when its folding antenna is down, making it a true pocket model.

But good news may be over-shadowed by the bad. Tests showed an alarming problem in the Midland using CTCSS. When the Midland FRS HT was keyed-up on a frequency adjacent to a GMRS repeater input - using a tone known to be in the repeater - that repeater was activated. Although voice wasn't passed every time, the interference takes the form of repeater keying. To the repeater listener, it sounds like the dreaded kerchunking which we all hate to hear. This is a serious condition - especially when the one repeater was activated at SEVEN MILES from the site, and another at OVER THIRTEEN MILES from its site! I am sure we could have gone even farther away, but we ran out of time. During his test, another reviewer talked over 100 MILES from a mountain. Does this give you an idea of the reality of potential interference? We wonder what it would take to get the FCC to look into this.

We hope people STAY OFF channels 8 through 14. If these channels are in fact used in this and other brands of FRS radios with CTCSS, there could be a lot of unintentional interference to our communications and to many other licensed users. Perhaps the worst part is that FRS people will probably never know they have interfered because they don't listen to any repeater output frequency. Also - on the models we tested - their reception was selective enough not to pick up adjacent repeater output by bleedover.

If you buy, we strongly urge you to use only channels 1 through 7, so as to not risk interfering with repeaters. Please advise all FRS users that you come into contact with to use channels 1 through 7, and explain why.

-end-

one clerk told me they used to in Calif. on cerain popular models...but they found that too many of them were being sold and then in 25 days they were returned...I wonder why. Bearcat's then...just one model or two...

seems people were sending their scanner in for repair and using a scanner on their time and then when repaired...take it back.

Plus he said people did not come to their store for scanners. They just told people to go to RS

bill conduit
etc.

Calif stores will not be selling TT's.. Think about it.

No every trunked system is Mot...most are GE. Mot is catching up. But GE is moving towards digital . I just posted a while back that GE/Erickson is selling a more advanced digital system to China . Not able to listen to.

Does this mean that the satellites overhead cannot listen to China anymore once they switch over to good old American Technology. would not surprise me one bit if the FBI or SS gets GE to implant a special circuit that allows the birds overhead to "hear" what's flowing in the minds of the "criminals that are in control of chinese people"

bill conduit
etc.

Timothy Leary: "...learning how to explore the two to fifteen
`minutes between the time that your heart stops and your brain
dies...the new territory."

LSD did that.

The antenna that comes with the radio is marginal... I'd find something
better in terms of a scanner antenna -- if you listen mostly to VHF-Hi,
get a duck cut for that, etc... Since its hamfest season, you'll find
some good ones there.

Otherwise, its a nice little general purpose radio... definitely a good
buy. And no, it cannot be modified.

>babble, probably even fewer, since it originates from you.

Looks to me like you are babbling, not me. A discussion of Area 51
is highly appropriate here, as there are many support services for
such a government project which require the use of radio signals
which may be intercepted with scanner radios. If such a facility
has been shut down, then it might be worth pointing out that it
is useless to try to intercept comms from these facilities. Likewise,
if the government or some magazine claims that such facilities have been
shut down, then it is perfectly appropriate to point out that such a
facility might actually still be in operation and suggest that one
still attempt to monitor the comms from these facilities.

Oh, BTW, You should probably be more concerned about your own
violations of the usage charters than the violations of others. If
you check your usage terms from Netcom, you will find that hiding your
identity (there is no slinger@netcom.com), and more so, claiming to
be posting from a shell account rather than a Netcruiser account, are
in violation of those guidelines. If you would like to pursue this
further, I'd be more than happy to go head to head with you in complaining
to abuse@netcom.com.

What kind of pager? If you are referring to a regular numeric pager (beeper) there are no chargers for these. The only way around that limitation would be to buy a couple of NiCd's and a charger where you have to remove the dead battery and replace with a fresh one).

Since NiCd's are rated at 1.2 vdc, it may not be a good idea since the low battery indication on most Motorola pagers kicks in around that point, so you'll find yourself changing batteries probably on a weekly basis.

I have a Motorola Bravo and I replace the battery every 5 weeks or so, and since I get them in bulk from Sam's Club, the cost to switching to NiCd's probably isn't worth it. A 16 pack of Energizer AA's ran me something like 8 or 9 bucks and will last me a year and a half, while a small charger and 2 NiCd's at Rat Shack will run you in the neighborhood of $13-$14 (minimal purchase)... with the batteries themselves lasting about 2-3 years.

Since most people I know keep their pagers for about a year or two... it's really not worth the extra expense.

The idea of a drop-in charger is a good one for beepers. I'm sure Motorola will develop a pager with a built-in battery pack and desk-charger. It would be a nice idea since I'm leaving mine all over the place when I'm home, and it's less wear and tear on the battery door.

From: jester@nbnet.nb.ca
Message-ID: <3389e087.1673468@news.nbnet.nb.ca>
Source record: 196617

I am looking to sell a Pro-25 Scanner with 800 & 900 Mhz coverage and a TRC-232 40 Channel CB radio both from Realistic for $150.00 dollars each. I am desperate to get my hands on a scanner with full coverage especially in the the Air frequency range (Air show coming to this area). If anyone is interested in buying these or trading for the requested scanner please let me know.

The FBI doesn't have jurisdiction in these matters. The FCC does.

In regards to non type-accepted transmitters, the sale of them is
perfect legal... however transmitting with these radios is an entirely
different matter.

Amateurs are a self-policing group... there really isn't any reason for
the feds to stake-out a hamfest. If a few bad radios change hands, so
be it.

The irony is that the ONLY "CW only" spectrum in any of the
ham bands is at 6m and 2m where no-code techs can operate
all they want without ever having passed a Morse test ... this
clearly shows how *important* Morse testing is ... (not) ...

> > I understand that not many people use CW to communicate.

Maybe so, but 100's of thousands (probably millions) use radio every day
with no need for knowledge of Morse whatsoever ...

All the lame excuses in the world won't make Morse "necessary" for
anything ...

Assuming you have a calibrated S-Meter, yes. A calibrated S-Meter on
a CB rig is highly unlikely. Going from 5 to 50 watts will give you
10 dB gain. It'll help, but probably not as much as using a
directional antenna, plus you get no increase in receive with the amp.
By going from AM to SSB you will pick up even MORE effective gain.

>BTW Glen assuming that everyone else who posts here is not a ham is a very
>poor assumption.
>
>William Lee N5WRX

Assuming that I made that assumption is an even worse assumption.

The person I was addressing surely wasn't a ham, or he wouldn't have
been asking the questions he asked. Other non-hams are surely reading
the posts, and if one of them is encouraged to become a ham by what I
wrote, it was well worth it, wouldn't you say?

From my own experiences I can tell you that the headphone socket on the ar8k is very adequate for decoding data. I use an external speaker unit with a socket on it that goes to my interface. I also fitted a volume control for the speaker so I can listen to the signal at a different volume than is required by the interface which is very handy. The audio signal on the data connector is much too low and you cannot adjust the volume as is very necessary for decoding purposes.

Best regards

If you go to http://www.pervisell.com you will find several shareware decoding programs that are excellent for decoding a wide variety of signals ie. Hamcomm - CW, RTTY, ARQ, FEC etc; JVFAX - SSTV, WEFAX; PD203 - Pocsag (pageing). The decoder circuit given in the PD203 file is quite good and works with them all.

Regards

Terry Gaff Dublin, Ireland.

Ron,

I have both and the AR8000 is by far the best. The only advantage to the MVT9000 is that it is easier to program. It is very suseptable to intermod & overload in high RF area's. The AR8000 is considerably cheaper also.

hope theis helps

Your right except the UBC3000xlt is not half the scanner the Pro43 is.
You can do a ton of modifications to a Pro43 to make it even better.
With the 3000 your stuck with the way it came out of the box. (ie. No
computer control, programing, etc.)

OK Carl, I agree. However the same people use the same radio everyday with no need for knowledge of theory either. For a vast majority of hams, its "plug and play". So, what do we do? How do we bring this to the point where we start to compromise? I think the first step would be to lower the SPEED required at respective levels. Food for thought......

2382. *** Proposal for CW qualification in Canada / U.S. ***

Newsgroup: rec.radio.scanner
Date: 1997-05-26 00:00:00 UTC
From: masa@writeme-x.com
Message-ID: <3388f74e.8868152@news.bctel.ca>
Source record: 196636
Cross-posted to:
rec.radio.scanner,alt.radio.scanner,rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.misc

In my opinion...

Open some HF bands to non-code technicians.... but make a restriction
such that:

"Without CW qualification, the operator cannot transmit CW
codes."

I understand that not many people use CW to communicate.
For many people, knowing CW does not do anything...

Well... I made up a plan... considering the people who already have CW
qualifications.

My Licensing System Proposal in U.S. / Canada.

1) Basic
250W
Above 30 MHz + under 4 MHz + 15m band

2) Standard w/basic w/CW5
500W
Above 30 MHz + under 14 MHz + 15m band

3) Advanced w/basic w/standard w/CW5 w/CW9
1000W
All bands

---

4) 5 wpm CW test
CW permission for
Above 30 MHz, under 4 MHz + 15m band

5) 9 wpm CW test
CW permission for
Above 30 MHz, under 14 MHz + 15m band

6) 12 wpm CW test
CW permission for all bands
--

*** Making all tests separate from another. ***

Method of Upgrading
Basic -> CW5 -> Standard -> CW9 -> Advanced -> CW12

*** Making all tests separate from another. ***

If you are in Japan, you can use some HF bands without getting CW qualifications. However, you may not transmit CW. You have a power restriction of 10W for HF bands. If I remember it correctly, you can use under 4 MHz and 15m band without CW qualification.

Hi, I have a pro 2004 in mint condition except for small scratch on
plastic key pad. It comes with the original box and a pro 2004 manual.
Backlit lcd works perfectly as well as everything else. Only $270 us funds.

Operating Modes
AM/
Narrow Band FM/
Wide Band FM/
Programmable
Scans in steps of 5k, 12.5k, 50kHz
Has 10 monitor/search channels independent of the 300 channel memory
Standard or Sound Squelch
LCD display with Hi/Low backlighting
Individual channel lockout
2-second scan delay, selectable with each channel
Selectable priority can be set to any channel
Search circuit lets you find new frequencies

Probably not. 50 watts isn't going to make all that much difference,
however, and it won't help your receiver at all. Better to spend that
money on an SSB rig and a good antenna. You'll still be legal, and
you'll hear better, and get out better, and cause less interference.

Better yet, sit down and get a ham ticket and talk anywhere you wish
with up to 1500 watts. It's not that hard, really.

Can you help??

New to scanning .. will be buying one in the next 30 days!

Can you explain or advise:

A. I have about $250-$300 to spend. What is a good one to buy?

B. Can someone explain "modified"?

C. Can I buy a scanner that has the ability to cover cellular? (Not that I ever would do that!)

Thanks in advance for your help!

Scanners are capable of intercepting portable and cordless
telephones, cellular telephones, some 900Mhz telephones, and
air to ground telephone contacts. Nothing is really "coded" except for
some of the Digi, and SS 900Mhz phones. Newer cell phones are also beginning
to use digital encryption as well.

Hello,

With my ar8k I wanted to receive, (because of latter decoding), CW keyed (carrier only) data, with keying frequency nearby 5 kHz. However, I'd like to add a jack on it and therefore I'll be very happy if somebody could give me any advice on this.

- where can be taken this signal from and which is the best point inside ar8000 for this ?
- could be used in this case the FFC audio output (pin 2) ?

If I missed something, please let me know!
Thank you very much for the help and any information.

Count the days until FRS goes the same way. I'm sure there will
be idiots trying to "shoot skip" on UHF.

Round' here, the 154 MHz VHF "dot" channels are already plagued
with "I'm stepping on you" idiots. I turned on the radio one
night and swore I was listening to CB channel 14.

It is just amazing what happens when technology is placed into
the hands of the "average" person.

Bill, my sister's had the same thing happen to her. According to the UPS office in Gainesville, Georgia, which is where our stuff comes from, there is no Park Street here in Cumming, Georgia. It's been here since the 1950's with no name change, and the houses have been here that long too. The first time it happened, she called, was told they'd redeliver. Three days later she called back and was told that she had given the wrong address. She told em what it was, they said, no it isn't, and refused to redeliver. She finally drove to Gainesville and got the stuff.

They still haven't put this street in their computer, as far as I know, since she's still not getting deliveries. Kind of funny, considering the zillion dollar control center that UPS has right here in this county. You know the kind, triple redundant power, earthquake and tornado proof bunker connected to the entire world with fiber, satellite, and probably hf as a backup. Just doesn't have a very good map, apparently.
Jim Dean

FALSE. Bandwidth remains the same. Trunked Radios system can make
better use of fewer frequencies but again signal bandwidth/deviation
remains the same.

>It is all about maxing your RF allocation. It is NOT
>about hiding from the public.
FALSE - Digital does offer more options such as status buttons,
messaging etc. But, its main purpose is to scramble audio Encrypted or
not its still not the common mode of transmission. If your going
digital then its for added security Meaning you don't want others to
easily monitor you.

Back to the bandwidth issue. Lets not confuse this with PCS type
phones which uses digital signals and can have more then one user per
channel. This saves bandwidth. NOT police digital radios.

Don't forget that Emergency Services frequencies are omitted from the
data base. I've found that most large cities that many services are
on trunked radio systems and thus your left with nothing of any real
interest.

Why? What is the harm is being avoided by prohibiting an individual from using Morse code? There is no such prohibition now, and no one has shown that the lack of such a prohibition has had little or no substantial effect upon amateur operation. In other words, why impose a prohibition that doesn't solve a problem?

Noda is welcome to comment on the US system, but the Canadian system underwent a considerable restructuring almost 5 years ago. It is much simpler than Noda's proposal and works quite well. Moreover, Noda's proposal continues that notion that one need Morse code in order to progress and get more privileges. How does the Morse code speed examinations relate to the increase in 3 dB increase in maximum usuable power as one progresses through the system. I doubt that Noda's proposal would be given much consideration by the radio frequency management agency considering his proposals emphasis on Morse code, a mode of communications that has been all but abandoned by all other users.

Not much difference???? Lets see..... Roughly and I say again for all the nit pickers.. Roughly a receiver will increase one s unit for each doubling of transmitted power... SO 5 watts = S-5 10 watts = S-6 20 watts = S7 40 watts = S8 and so on and so on.

Going from 5 watts to 40 watts will make a real difference. I am sure most can see that the problem is that the amount of power needed to gain more distance needs to double each time. Very quickly you end up needing thousands of watts to make one s unit of difference to the receiving end.

But as a Ham you new that didn't you?

BTW Glen assuming that everyone else who posts here is not a ham is a very poor assumption.

According to Uniden's trunked frequency guide the city of Cincinnati
has or at least is lisenced for a 20 channel trunk system.
YOu can always listen to conventional systems on the Trunk Tracker.

There are a couple of ways. Probably the easiest, talk to the sales reps of the pager companies. Most have coverage maps that they give out as sales literature, that will give you a general idea where the towers are. The other way, which is very time consuming and tedious, is to search the FCC files and pick out call letters of a few hunded different services out of tens of thousands and manually compile a list. It all depends on how precise you need the locations of the towers.

Along those same lines, if you remember back a FEW years, Bearcat had
a scanner which was the same way, black box, antenna, serial port. It
was soley intended to be controlled by external computer, they didn't
last long on the market due to their being a bit too much ahead of their
time for the time, and were soon discontinued. What ever happened with
that idea. Now that most all computers nowadays are capable of
multi-tasking, you could run a few radios at a time. Sounds like fun to
me..

>A LOT of short range radio interference.

They surely do. And you CAN get interference problems even with
Winradio. You can get interference problems with any radio connected
to the PC. The most common problems are:

1. Direct interference - this is usually overcome by shielding
(Winradio is very well shielded, so you don't get this type of
interference)

2. Interference through the antenna
(the idea is to put your antenna as far as you can from the PC)

3. Interference caused by antenna mismatch
(if your shielded cable is impedance-mismatched which
is common especially with shortwave antennas, then the shield
itself will act as a pickup!)

4. Interference caused by earthing problems
(difference of earth potential of the PC and your antenna)

Most of these problems are surmountable and the Winradio manual
tells you how. With my Winradio installation, I had problems on
shortwaves (VHF/UHF was fine straight away). I solved it
by plugging the PC power lead through an RF filter.

> But I guess that Winradio does work because some people like it...

I really do like mine. It was strange to start with (I was used to
twisting the tuning knob on my old Icom), but now I am addicted to it.

>Tank you.

I really do like mine. It was strange to start with as I was used to
turning the tuning knob on my old Icom receiver, but now I prefer the
software control.

If you are only into shortwave then I would not recommend Winradio.
As any wide-band scanners, it can't be as good as a dedicated
shortwave receiver (unless you use a preselector).
But as a general purpose wide-band scanner,
it is very good.

The installation is very easy and the documentation is also very good.
It may not be the best radio around, but itis a solid, well
thought-through product and a good value for money.
I haven't seen their new software yet (apparently it has a spectrum
analyzer), this should make it a better value still.

Regards,
Peter Newman

This fine legal point is probably true, but the scanner which was shone is
the news report about the "Florida Couple" was a PRO-2004 (or very similar
) which in this case was probably installed.

Thanks for the legal clarification. I may have confused some Florida
scanner users and we don't need that among the already confusing and
shifting laws about scanning.

It appears that we Americans are taking our time about deciding and adopting a new mobile phone standard. Ask yourself who created the technology for your cellphones? Does the American company Motorola come to mind? All kidding aside, we do have some digital cellphones (thankfully not many). The new digital system will occupy a different part of the radio spectrum.

Hope this clears up any confusion.

If you want to prevent the citizens from hearing what your saying get a
secure net. Then when something happens that you'd rather not be heard
by everyone with a scanner switch the radio to secure and they only hear
noise.

This is the attitude the sucks in the ham world. You stuffy old farts
need to be pushed out of the way by new people with new ideas about the
hobby. Trade in your radio for a one way trip to a retirement home.

From: William Lee <willee@inwave.com>
Message-ID: <01bc6970$89918400$7cee65ce@william-lee>
Source record: 196728

I recently posted some advice about installing a CB setup with a 20 - 50 watt RF amp.
I was really suprised at the number of posts that advised that was illegal.
SO ...
What is the point? Isn't listening to telephone calls on a scanner illegal? Who protests when someone offers their cell ready scanner for sell on the news group?

I think that there is a large group that hangs out here and lives for the opertunity to correct or straighten someone else out. They catch the slightest of errors or illegalities and promptly use bandwidth to point it out to the rest of us.

Of course running more than 5 watts (input to the final amp. not to the antenna) is illegal on the Chicken Band. But who does it stop from doing it? Has anyone running less than 100 watts ever been arrested for using excessive power?

Well, if you'll notice..(it's in your post too,) for some reason, many
amatuer radio ops feel it's necessary to put their call sign in their
signature file. Perhaps this is done to give the impression of validity to
the garbage they post. I am not a Ham, have never wanted to be, and still
manage to thoroughly enjoy my radio hobby. I'm not missing a thing by not
being a Ham.......and I'm proud of that, as you are your call letters.

Harken! Ye Publique Notice! Hear Ye!

Know how professional spectrum analyzers cost anywhere from $10,000 on up to $60,000? And how hobbyist versions from ICOM, etc, can cost an arm and a leg? Well, hold on to your socks.....

Little did anyone know, but a cheap, but great spectrum analyzer has been on the market for quite a while now in the form of WINRADIO!

Yes, that's right, WinRadio has spectral display capability, but no one knew of it, including yours truly. But now we know!

Coming soon, perhaps within a day or two of reading this, is Version 2.0 of the standard control program for WinRadio, that contains an RF SPECTRUM SCOPE with some pretty awesome capabilities.....free upgrade, to the best of my knowledge!

For more information, including download of the upgrade software:

http://www.winradio.net.au (Australia)
http://www.winradio.com (USA)

E-Mail: info@winradio.net.au

And now, a brief overview of the RF SPECTRUM SCOPE capabilities in the coming Version 2.0 of the WinRadio control software:

Version 2.0 contains some basic refinements of the main control program and one whopper of a new feature to make the competition eat their hearts out: an RF Spectrum Scope, basically a spectrum analyzer feature previously found only on very expensive radios,or as an expensive add-on! Zowie! It's too cool for words!

One of the slickest things about the new RF Spectrum Scope is the ability to position the cursor on a "blip" and instantly, WinRadio tunes to that frequency! Bzzzaaaap! That quick!

The RF Spectrum Scope has seven selectable spectrum scan steps as follows: 1, 2, 5, 10, 20, 50, & 100 kHz; two Resolution Bandwidths: 6 & 17 kHz; and a slew of setup and control options, including single and continuous sweeps; Max/Min/Previous/Current sweeps in different colors (especially slick for identifying 2-way systems that key and unkey all the time, in contrast to broadcast and continuous carrier signals that are always present.) WinRadio can be muted or unmuted during sweeps.

Sweeps can be set by either of two criteria: start-stop (lower-upper limits), or center freq and bandwidth. Wicked! Utterly delightful is the ability to save the spectrum screen to a very small file and subsequently to reuse it as an active display, or later configure it as a photograph of a sweep. Hundreds of sweeps can be saved in a very small amount of disk space. A test sweep of the 88-108 MHz FM Broadcast Band required all of 1250-bytes.

The RF Spectrum Scope, has a Zoom-In / Zoom-Out feature to make the spectral display appear as detailed or not as you choose. V2.0 upgrades the main control program in a number of subtle ways, including an S-Meter that shows numeric values of 0-100 as well as the original bargraph display. The RF Spectrum Scope shows the relative S-meter numbers, too! (A new scanning Squelch was added to the main program, too.)

Spectrum sweeps can be set to pretty much any desired limits, though the narrower, the more efficient, of course. I'm not sure what the sweep speed is, but it would be measured in steps per second, and therefore is probably sync'd to the Scan/Search rate for the main radio at 50 per second. Given the seven sweep steps mentioned above, it is possible to sweep 20-MHz of spectrum in under 10-sec.

If V2.0 of the WinRadio software isn't available for download at the above two Web sites when you read this, check back periodically during the coming week, as I'm told it will be released shortly.

2439. Re: ** Scanning FRS vs. GMRS **

Newsgroup: rec.radio.scanner
Date: 1997-05-26 00:00:00 UTC
From: schlemba@ix.netcom.com
Message-ID: <5maqln$q3l@sjx-ixn8.ix.netcom.com>
Source record: 196732

Go for it! Scan 'em all. In Central Georgia, there's moderate GMRS traffic (mostly REACT and Brown & Williamson) and very little FRS traffic. The FRS users would be smart to stay between channel 8 and 14. They won't get clobbered by higher powered GMRS HTs on interstitial channels. Read June's CQ VHF for a good discussion on GMRS and FRS. By the way, if you're in the Warner Robins area, give me a call on GMRS Interstitial 7.

Steve S.
KAF8111

P.S. If anyone paid the $25 for the GMRS repeater guide, pls tell me if it was worth it.

#->http://www.interlog.com/~ronkatz/
#->Your source of information for
#->Scanning the Emergency Services and More.

I see your point, and it's one well taken. But the
point I was trying to make is that soon there will be
soo many listings (and requests for more listings from
someone who sighin in late like asking for frequencies
for ####### or mods where appear here constantly.)

It also help releave some of the congestion here, not that
there are too many messages. But my view was that
someone would have a place to go to either post a
new/updated Group Number, or request one for their
part of the country, in addition to finding out new
and interesting things about the radio that are apparant
right this minute.

Did expect everyone to agree, I just thought it was a good
idea.

You want to start a news group on product XYZ, help yourself.
To my knowledge, there are no restrictions on the number
of newsgroups that can be out there.

Charlie,

I also had a bad experience when I visited the HRO in Atlanta. Once they found out I was just a lowly No-Code-Tech, it seemed like I was shunned and no further help was provided. I bought the Repeater Directory ($8.00) and left and I vowed that I will never step foot in a HRO again.

I went to AES in Orlando Florida and was very pleased with their customer service. They seemed to want to help no matter what you were looking for.

Attitudes like the one I saw at HRO Atlanta are probably why so many people go to places like Radio Shack and/or lose interest in Ham Radio as a hobby.

Well, that's just my opinion, thought I'd let you hear from the negative side of the fence too...

The TAFL lists are several (HUGE) lists by frequency range so you
want 144-150 for example you have to DL that file, and so on for
all freqs. Seems like Industry Canada needs to look at how Transport
Canada set up the Aircraft Registration Number look-up database. IMHO
a look-up data-base would be more useful...

>#->it.
>#->

Ron...well, you have an opinion.
RS has answers too.

Ron...think about this. Trunktracking is a mind-sport.
Trunk-tracking (TT) is a audio-foul ball too.

TT is a seeing what few know about. So making a newsgroup would make the person who don't know be able to be told: go to rec.tt

Simplifying having to explain the system...this way he can scroll to his MONIED content. He's happy.

Nuther thing: if there were a new newsgroup for TT then the posting there would be specialized and when we access that sight we are able to help poor student save money for their next beer bash by not having them download irrelevant stuff.

Think about their needs...not to spend money on downloading if they don't have to. They get into this "angst=attack" mode like you won't believe...I get these tearful flames from them making me out to be the bad guy because of the subject being not 'right' for this student on a loan from Zaire.

RON...be open to new stuff. The world is evolving and you just may have an answer some day. Today you don't. Just plain old bad kharma Ron...next time.

In the interim...the idea is good because it simplifies what is going to be a "major" topic of interest as the units get sold and those who don't have a Motorolla system in place to listen to are going to complain to rec.radio.scanner.

Is this what you want Ron? All this bandwith being used to
complain about what could have been over in rec.radio.tt?

Surely Ron, you must have some iota of compassion for the
rest of the group who need to "breathe" the correct input.

If the company has a piss poor attitude (as many American companies, like this one) , why buy ANYTHING from them? Me, I would just tell them to go get twisted, and walk right out the door. I wouldn't spend 8 cents let alone 8 dollars. When you buy from them, you support them.

HRO is a typical don't give a damn store. Go elsewhere, try AES or better yet, buy it off the net and save money.

have to agree with you though, on the point of driving newer hams off. That is part of the plan, since most of the emplyees/managers of HRO are advanced or extra class ticket holders. They will learn only when their radios are usless, because theie precious spectrum will be re-allocated to someone else. Sad, isn;t it?

Good luck.

HELP,

I have a pro2006, two interfaces (message trackers, and another) two software packages (mt, and pd302) the headphone hookup has a high error rate. I hooked one wire to tp-2 on the 2006 board, and grounded the other to the frame of the radio, still no luck. If anyone out there is in the tampa area, i would appreciate a few minutes to help me get this thing working.

Used PRO-43' are a good deal....maybe the best. AOR handhelds
typically cover that range, but I don't recommend them.

Get a current Radio Shack catalog and review it for more options.

Had one of those about 15 years ago. I seem to remember that the last or the first two digits determined the band. Mine was 30-50, 151-174 and 450-470 MHz. The band select might go:

Low band 00
High band 01
UHF 10

0 = hole covered up, 1 = hole uncovered. (I think)

I made extra cards from thin sheets of acrylic plastic. For the hole covering material I used Printed Circuit Tape. This tape was used to create Printed circuit artwork. Available at art supply or drafting stores. The stuff I used was about 1/8" wide (.125). It's colored black and is similar to masking tape. Bishop was the manufacturer.

The frequency was selected by creating a digital number (1 & O) to tell the PLL what frequency you wanted.

Hope this helps.

Hi, I have a pro 2004 in mint condition except for small scratch on
plastic key pad. It comes with the original box and a pro 2004 manual.
Backlit lcd works perfectly as well as everything else. Only $270 us funds.

Operating Modes
AM/
Narrow Band FM/
Wide Band FM/
Programmable
Scans in steps of 5k, 12.5k, 50kHz
Has 10 monitor/search channels independent of the 300 channel memory
Standard or Sound Squelch
LCD display with Hi/Low backlighting
Individual channel lockout
2-second scan delay, selectable with each channel
Selectable priority can be set to any channel
Search circuit lets you find new frequencies

#->>
#->> Ok, I'm off the soapbox now. Thanks for your time..

I live out west of Atlanta in Douglas County and am also
a no-code Tech.

I've visited HRO here in Atlanta on many, many occasions and
the sales staff have always been extremely helpful as well as
exceptionally knowledgeable.

I've give them a break if you don't mind me saying so - the
person you delt with could have been having a bad day or
just got there from having a hell of a fight with his wife. No
way to know!

But I certainly wouldn't stay out of the store from one bad
experience. Don't get me wrong here, if I went in 3 or 4 times
and was treated like a second class citizen every time I
went in, I wouldn't go back. But not until I had a very, very
long and rather heated discussion with the owner of the
store. Then I'd call their national office and raise hell
there as well. But with only one incident - it could have
been anything including your imagination!

Yes a WSR full of misinformation or dated information. I
occasionaly get a photocopy of it. I feel that it is a
waste of time for the nice fellow to forward it to me. I
delight in giving away the copy at work to hackers who
are bored and are bugging me for something to read. We
treat it sort of like a joke. WSR is always good for a
chuckle.

For the same kind of money required for WSR a hardware
hacker would be better served in getting "Nuts and Volts"
IMHO. I get free copies of that one also but the
publsiher is kind enought to mail them directly to me.

: What can you suggest?
: Peter

The best performance will be had by using a full length 1/4 wave
whip (102"). They actually look OK on a pathfinder when mounted on the
back bumper at one corner.

If you desire a somewhat shorter antenna, and don't mind mounting
it on the roof, then a base-loaded whip will perform well. There's
basically 2 kinds of these (this is oversimplified, but will give you
an idea of what's important for efficiency)

1) Steel whips about 35" long. They tend to radiate mostly from
the whip; the bottom loading coil is used mainly for matching.

2) Steel whips about 51" long. These usually are designed so that
the coil radiates some of the signal as well as the whip. They
tend to be more efficient than the #1 type. (K40 is one of many
in this class)

All bottom loaded antennas perform poorly if the coil isn't
positioned so that it's free of metal obstructions.

If you want to mount a whip off the corner bumpers or side of a
vehicle and don't want the size of a 9' whip, then I'd recommend using
a top loaded whip (your standard 4' white truckers antenna). These
antennas move the current node as far up the whip as possible which
increases efficiency, and are better able to deal with unusual ground
plane irregularities found when corner-mounting.

Paul

Well, I'm not saying that anyone should buy an amplifier just because
damn near everyone else has one. <G>

The reality of the situation is that you need a lot of grunt just to get
across the street when the noise level is high. The standard mobile
install of a VHF-lo commercial two-way radio is 50Watts, with most
running 80W+. For VHF it is 25Watts and UHF 25Watts as well. Most
repeaters are running 50-100Watts.

If 5Watts is "good enough for anybody", I've seen no evidence of that!

Cheers!

> the T/T. I plan to use my in store credit card for it.Thanks in advance.
> -Bob-I called the Circuit City here in Charlotte and asked about carrying the trunk-tracker - They advised that all they carry are the sport scanners and most are sold around race time..The sales guy called their buyer and Richmond and was told that they do not plan to add any additional scanners at this time - - Maybe if enough people call and ask about them then they might change their mind - - I even had the salesguy wanting to buy one!!!
Charlotte has a 30 channel Smart zone trunk and can't wait to try the TT - It is absoultly impossible to listen to their system with a conventional scanner - I have gone as far as listening to the mobile freqs w/ a high gain omni just to see what is going on in my neighborhood.
I am doing a little trading with Bob Grove for my TT - a Uniden 25w 450 repeater for 1 TT and the freq database with mapping.

Hi, i posted this message before, got no responses, so will try this again before I retire the scanner to the land of the lost.

I have an SBE OptiScan, which was the card programmable scanner, 10 channel.
I lost the frequency selectiom manual, so have no idea what to 'leave' on the card for the frequencies I want.

Would anyone out there have this manual and be willing to lookup 10 frequencies for me, or know where I can get my eyes on a copy of the manual for about 10 minutes???

Thank you

Ummmmmm.....sure. But don't YOU work day in and day out, too? And
the job you do.....is it ever over and done? (Yeah, when you're dead.)
Don't you CONTINUALLY add to and improve your product?

> I don't fault the guy for wanting to earn a living, and Cheek certainly
> deserves to get whatever he can for his material, but I sense a lot of
> greed on his part.

How so, pray tell?

> I've looked through his bibliography; to get all he has ever written
> about my PRO43 and PRO2006, I'd have to spend well over $100.

Well, Geezus, dude, whaddya expect? And what do you suggest I do
besides work for FREE? I mean, look.....I wrote three books, the
first in 1989; the second in 1991; and the third in 1995. I also
publish and edit the monthly WORLD SCANNER REPORT that launched in
January 1991 and which continues through this day.

Now with each writing, I try to include ONLY new material to spare
those who bought the previous material from having to pay for repeat
stuff. It follows that whatever I knew in 1995 is going to be
enhanced and increased by what I know two years later. Doesn't it
work that way for you, too?

Consider for a minute the dudes who bought my first book. Now how
would they feel if I repeated it in Book 2 along with the new material
and charged double for it? Talk about GREED! Now those guys would
have some firm footing if I did that. Paper, ink, time, and weight
all add to the cost of a product. It would be silly if I did what I
think you are inferring.............

So how can I do justice? Surely you can't expect me to give away my
1989 work? I couldn't, if I wanted to......because I don't own the
copyright. My publisher does. Likewise for my other two books; the
publishers own the copyrights; not me. Furthermore, I was paid a flat
fee to write my first two books.....$500 for the first one and $750
for the second one! I get no royalties or other benefits from that
publisher, who by now has sold over 10,000 copies of each book.

That's largely why I found a different publisher for my third book, the ULTIMATE SCANNER....at least I get royalties on it for my time and trouble. But I don't own the book, so I can't give it away.......

What exactly do you suggest so that I don't come off "greedy"?

I share your concern for the COST of acquiring all the relevant material for a given scanner that's been extensively written about over the years, but I don't have a clue as to exactly what to do about it. On the other hand, a hundred bucks for the wealth of information that's now available for the PRO-2006 isn't all that steep, when you consider the VOLUME and DETAIL and QUALITY of the material. It is GOOD, and it doesn't have ANY competition.....or don't you agree?

> With a little homework, you could find other resources for a lot less
> money. No biggie. Just my opinion.

Sure you can. SOME. Some can definitely be found for FREE around the Internet, including at my Web and FTP sites. But you are not going to find the VOLUME and DETAIL and QUALITY of material for free like that which appears in my books and in the monthly WORLD SCANNER REPORT. Not, unless someone plagiarizes my work, that is.

So look, dude, I am wide open to any constructive suggestions you might have to "improve" whatever it is you find "faulty". But at the same time, I kind of resent this "greed" shit you threw out. The ONLY thing I have any semblance of control over is the monthly WORLD SCANNER REPORT.....but I sure don't see how I can give it away and still pay the rent; feed the kids; and stay out of the Salvation Army Soup Kitchen and the homeless shelter.

But if you have any constructive comments, I'd be all ears.

Do tell, please!

> Has anyone had any experience with the new FRS radios from
> Motorola?

I bought two Motorola Sport 7X radios from Southern C&E and love them. They're tiny, have power-on beep self-test, LED transmit light, and the typical Motorola design. My son and I took a one-week RV trip and they were invaluable for times he was off by himself (he's 10 years-old) and when I had to go somewhere but leave him in the RV. At one-half watt, the range isn't great. But for the types of activities we did, it was more than sufficient. You just have to buy them for--well, family activities and not the type of radio systems that cover miles and miles.

We went to Las Vegas and a couple of times were on opposite sides of the street where you just couldn't yell to one another. We were in Bryce Canyon National Park, and could talk from trail-top to trail-bottom. We'd stop at truck stops and would talk from inside the RV to inside the restaurant. They made the trip much more convenient.

By the way, I tested out the range over water and found the voice quality a little scratchy at 1.2 miles. They suggest a 2 mile range, but that may be totally optimum.

I'm buying a third radio for when the entire family goes on vacation this summer. Oh, and we use them at home, too. Ever find a bargain in one of those warehouse stores and want your spouse's opinion on whether to buy it? Now I can alert her to come over without spending 10 minutes hunting her down!

2497. New Net Software could help trunktracker users

Newsgroup: rec.radio.scanner
Date: 1997-05-27 00:00:00 UTC

I am probably the last kid on the block to discover ICQ, which stands for I seek you. For those who have the trunktracker and who are trying to figure out the trunking id's this might be a useful tool. Picture this as you are listening to the scanner and using the computer. Conversation on a channel sounds interesting but you can't place the id. You alert another user who is online to look at that id and see if they can figure out what the talk group is used for. Between the two or more of you - you have it! This of course is most useful for users in the same city.

ICQ is a revolutionary, user-friendly, Internet program that tells you who's online at all times. No longer will you search in vain for friends & associates on the 'net. ICQ does the searching for you, alerting you in real time when friends or colleague sign on. In addition, ICQ continually tells you which of your friends & colleagues are online.

With ICQ, you can chat, send messages and files, play games or just hang out with your fellow 'netters while still surfing the net.

The program runs in the background, taking up a minimum amount of memory and net resources. While you work on other applications, ICQ alerts you when friends and associates sign on, allowing you to work efficiently while having a whole range of Internet functions at your fingertips. Among the functions available are: chat, message, e-mail, URL and file transfer.

ICQ also supports a variety of popular external Internet applications. With ICQ, launching an Internet phone or video call is a breeze. With a click of a button, you and a friend (or friends) are instantly connected. These events may be executed among multiple users, so you can conduct a conference or just hang out online.

All these functions are organized in one easy to use program that integrates easily into your desktop.

This software and the use of the ICQ server is free at this time. It is so neat I don't think many would mind paying for it though if they did charge for it later on.

Besides you would have figured out all the trunking id's
by that time anyway. The URL to get it is...
http://www.mirabilis.com/index.html

If you are in the Atlanta metro area send me a note via
ICQ if you join the ICQ server.

>Get the picture? Shit happens....As long as it happens to someone
else.

Jim has a point. A very very good point. It happens.

A shipment goes out normal. so it gets into normal channels.

say 100 go out like this. And in that shipment are two which
are to go out RED. Next day, must be there, and pay three to
four times normal rate..

Special handling and special attention to details is the key
here. You are paying for "attention"....

My guess is that they consider it NORMAL.

As such it gets little or no more attention because it is
a freak-box. It's not normal.

That was what I was speaking about in my complaint. IT got
no special attention from the handlers after it got to the
destination city. Once it got there it became NORMAL>

UPS is not living up to the money paid it to "special order"
that package or two out of 100 sent.

It's being paid to be lazy. Being paid three to four times
more to think you are going to get it "as they say you will in
the brochures"... You believe it. Being paid that extra money

is just money to them. They have no special consideration for that "your special box" sitting there in their "outbox today".

It may or may not get delivered. Depends. On what the attitude is of the personnel at that post for that time your special box is looking for attention.

Say there is a mistake in the street address. The correct one is 1933 Space Street. Butte Montana zip. Let's say the address on the package reads :" Spake Street...etc.

The reviewer sees it and says it's not in the book and declines to send it out. So it goes into another box to "wait" til it gets discovered some time.

here is the problem: should not that special handling box have been sent to "we figure out problems" NOW. There they could look at the name it is going to and then see that the zip code is there and from that see that the number of the address is in that zip code. Two possibilites. did they look up the name in the phone book? Call Infomation or just ask the driver to figure it out seeing as how he delivers that area daily and will most likely recognize the name or address and correct it and deliver it that day as expected.

But it never is done. It gets sat on. It stays there. No one looks further because the person who does that took the day off for an early holiday.

The only reason they get to finding out the problems is getting letters or faxes or phone calls demanding to know why paying the up to four times normal the package was not delivered the next day.

The machine does not care. It will be delivered the next business day and they apoligize. They also keep the money.

Or is there some guarantee at work here if they don't.

In other words, that extra money is paid to guarantee delivery tomorrow and it's their responsibility to find out that problem dealing with a letter or two being in the wrong place on the mailing label.

Guess what: they take no responsibility for it. It's not their fault. But it is. Special Handling is Special.

Laziness at its height getting richer off this non-production of what is hyped as "overnight delivery" to you.

Moral: send it normally and it will get special attention. It will be like the others. this way no one has to think about solving a problem.

bill conduit
etc.

I have been able to pick up the Union Twp system from Morrow (in Eastern
warren county). However,
given that it has only 4 channels (3 + 1 data) you may find things a little
slow there and handily covered
via conventional scanning. The warren county system is pretty busy, and you
may be able to DX it.
However, if you are not interested in things in that area, my suggestion
would be to wait until Hamilton County
and/or Cincinnati get trunked.... Both have large frequency allocations but
don't seem to be 'online' yet...

> cheaper also.

I will agree that the 9000 is much more susceptible to intermod and
has a large number of birdies. Due to its poorer front-end filtering,
it is more sensitive overall than the 8000(when comparing the two
with identical antennas).
I will not agree that the "only advantage" to the 9000 is it's
ease of programmability. The physical construction is vastly superior
to the AR8000. The battery meter is a great feature. The LCD is
much easier to read and conveys more information. It has ten
priority channels and narrow-AM receive. It has a real bandscope
compare to the toy-feature found on the AR8000. And the marker
function of the bandscope is wonderful.
Both radios have great audio power and quality. Both take 4 AAs.
Both have 2 VFOs, 1000 channels, 20 banks, 20 search limits, alpha-
tagging, attenuators, built-in HF antennas, auto-store(although
the 9000's is "dumb") search-pass(8000=1000 channels 9000=500)
and both have backlit displays & keypads. The 9000 is missing
computer control which should be on a unit of this caliber.
Most people will probably find the AR8000 to be a better
match for them but I personally prefer the 9000 for it's extra
features, ease of use and solid feel. And I purchased my 9000
for $530 which makes it a no-brainer for me to choose between
them when considering the AR8000 was about $550 and that it is
no longer available new.

Kevin:

The Morse code requirements aren't keeping you off of the HF bands.
YOU are keeping yourself off of the HF bands. If all you want to do is
talk on HF phone, then forget about ham radio, because ham radio
is much MORE than that. Morse code is an effective, practical
communications skill now unique to amateurs and universal among
them. We learn it to gain the benefits of its use. The incentive to
learn Morse code is the attachment of the requirement to all other
operating privileges on HF. So there you go.

You can either complain about the Morse requirements, which gives
you about a 20-year wait, IMHO, or you can learn it NOW and get
yourself active on HF. It's entirely up to you!

11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.
ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15
.
add shipping to all prices.
if interested, leave e-mail...

I have a VHF Minitor I pager that usually works great. However, sometimes the pager will not receive anything. When it is in this state, I can push the reset button on the top and the volume is much lower and the squelch will not reset when I release the button. This condition just comes and goes at random. Any help with this will be greatly appreciated.

Hi Bill, I've got your books and find them very imformative and would
have paid twice what they cost me. For someone to pay out hundreds if
not thousands of dollars on scanning and receiving equipment it sure is
petty to bitch over the price of a book about them. I can't get over =

the way some people recent others making an honest living. =

I've been a fan of your writings since you wrote for Monitoring Times
and have done alot of the mods and projects you wrote about. My Pro-
2006 has the Data Squelch mod, and the SSB interface. You explain things
very well and that means alot! Keep up the good work knowing that it =

is appreciated.

I don't know who stirred up this bee's nest, but instead of going back and forth, how about just Mr. Cheek posting some info on the books? Like the table of contents and what type of mods the books go into? Do the books have more info in them than what he posts on the net? We haven't seen him here in the flame world for quite a while, so maybe he could refresh our memories?

A challenge to Mr. Cheek: Rip out the microprocessor currently in a cell blocked radio and replace it with a microcontroller capable of all frequencies. Granted multi pin devices like microprocessors aren't the easiest thing to desolder, but it would be interesting.

True enough, but the fellow who saw "greed" appeared to maybe have a
better idea and I certainly am interested in better ideas.

Matter of fact, it is "better ideas" that keeps me writing new books
and magazine articles.

There is no privacy of radio signals sent in the "clear". You cannot expect privacy if you scream out secrets in a crowded train!

> I ..... do NOT think you have a right to listen to the cellulars.

Do YOU have a right to listen to two people talking in a restaurant at the table next to yours.....especially IF they are loud and clear?

Well, cellular radio signals pass across your property; through your body; and even into your boudoir as you make love to your lady in the most private of moments.

If others have the "right" to broadcast RF coded energy into your body and private chambers, then you have the right to detect and decode that energy for the purpose of determining if it is harmful to you or to those entrusted to your care.

> .. especially for those who live in the states... it is
> illegal you know...

Despotic and tyrannical governments the world over have long been known for making basic rights "illegal". Governments are not deities.

Please see my recent post titled:

CHEAP SPECTRUM ANALYZER!

That new version of the WinRadio control software is now available at
the following sites:

http://www.winradio.com (USA)

http://www.winradio.net.au (Australia)

E-Mail for info: info@winradio.net.au

Version 2.01 of the new WinRadio software containing the remarkable
RF SPECTRUM SCOPE was posted on 5/27/97, but a few cosmetic oddities
were discovered so Version 2.02 will be posted in a short time.

If you already downloaded the v2.01 program, stop in again and get the
updated version in a few days.

It's worth noting that many so-called "spread spectrum" phones
--aren't. The FTC and the FCC don't have much of a brain trust these
days, so don't expect much enforcement. Besides, I'll bet certain
"feds" would just love having a back door in to your "private" radio
conversations.

If you've got his correct address and phone number, you could rent a car and travel to Austin, TX from anywhere in the CONUS for that sum of money and pay him a friendly visit yourself. I've heard of more than one person who has been cheated over the Internet do this and they usually get good results. Imagine the look on his face if you would show up at his doorstep :-)

What is "monstrous" about it? It spawns four threads and waits for callbacks. It operates under the sockets umbrella. No intense polling thing going on there to chew up CPU. I measured it at less than 5% of all resources at idle and well within bounds when you had the windows open. A very acceptable overall footprint compared to a byte-hog like Netscape Navigator. And it is "BETA" software. That means the server is BETA as well. Give it time to mature. I hope they have great success with it before a Microsoft knock-off is released. I agree with Victor that it is a handy tool for handling conversation across the net.

Deal with Jeff at the Ham Station. He came through and what he did was not really the normal thing to do.

I got my TT today and it was to have been here Saturday. UPS told him that the mailing label was sending the unit to a street that did not exist. And it was his fault and for him to tell me that the next business day after the problem was fixed.

JEFF...you didn't do wrong. I am looking at the mailing label you printed out and there is NO Z in it as UPS told you. NO> There is only the K as it was written in plain ol Indianapolian script.

JEFF...you did the right thing. Please don't take it seriously and seek out a psychotherapist for help. Seek out a local REP at UPS and demand that they credit you full costs involved in this UPS'ian snafu.

I asked for the supervisor and she told me that based on what I told her and based on what you provided them...rather than have me do another more detailed posting to the INTERNET, she's going to acknowledge facts and got the tracking number and made a note checking it twice and to hell with the rice.

JEFF...relax. Go to the source. I will even send you the PROOF...the mailing label. That is what will be done at my expense to get it to you NORMALLY. I'll send it US MAIL.

Everyone ... deal with the JEFF GUY. HE deserves our applause.

Why?

When I told him the package did not arrive he was told by UPS on Monday it was his fault. Jeff told me he would EAT the $35 shipping fee for Saturday overnight and discount it from my visa charge.

Jeff. Continue to keep it off my card. I agree. No use billing me more. It's free shipping JEFF>

you just have to call them, complain, explain, about the bane, and aggravation you are going through.

Everyone...Jeff took responsibility right away and made good on a mistake that was not his. say, that is class. the man is a Mother Theresa of the scanner world.

Readers...make copies of this, put it in save and when people who are not reborn yet ask about dealing with JEFF, send them this on the net to them asap.

This man deserves a loud applause and for good reasons. He made good and in the final analysis: that is how businesses should be run. He deserves a visit by the POPE.

JEFF...you are exonerated.

I'll send the mailing label to you soon.

> but instead of going back and forth, how about just Mr. Cheek posting some
> info on the books? Like the table of contents and what type of mods the
> books go into?

Oh kripes, why? I wrote them in 1989, 1991, and 1995. They are still "best sellers", and information on them exists in grand profusion everywhere, from magazine reviews and ads to accolades and gripes all over the Internet. I certainly don't need to be taking THAT kind of a focus at all. The "promotion" periods for my books have long 'expired'. They're household tools now.

It would not be a service to the newsgroup if I were to go on a promo tour for my books now. I will be happy to answer specific questions about them, time and genuineness of the question, permitting.

> Do the books have more info in them than what he posts on the net?

I do not post material from my books, magazine articles, and monthly newsletter out of fairness and respect for the publishers. It's both an ethical matter as well as a legal issue....copyrights and all....

> We haven't seen him here in the flame world for quite a while,
> so maybe he could refresh our memories?

I come and go in my own good time. Who is this "our" you're speaking of and apparently "for". Did anyone give you a Power of Attorney? As for refreshing YOUR memory, I'll respectfully decline in the absence of specific questions. I don't have the time to whip out redundant and repeated material of vague focus. :-)

> A challenge to Mr. Cheek: Rip out the microprocessor currently in a cell
> blocked radio and replace it with a microcontroller capable of all
> frequencies. Granted multi pin devices like microprocessors aren't the
> easiest thing to desolder, but it would be interesting.

That would be silly, not only for the reason YOU mentioned, but also because:

1. it is ILLEGAL

2. I do not have the firmware or source code for the
original microprocessor(s) and am not a programmer
to where I can write new code.

3. There would be no market for replacement microprocessors,
notably because of the very drawback YOU mentioned, and because
of the price, which would have to be a minimum of $100, and
maybe more.....

To elaborate on the drawback YOU mentioned, most scanner
microprocessors now are surface-mount devices with 64 to 100 pins
spaced less than 1-mm apart and it would take a professional to
do the replacement for most people in the "potential market", thereby
adding to the cost, probably another $100 or more.

Furthermore, no two scanners use the same microprocessor, so to do
what you challenge would be an exercise in utter imbecilic idiocy and
sheer stupidity since the overall market would be tiny as it is, and
when you pick one scanner out of the bunch, it would be tinier still.

Next-to-Lastly, it could take several months of intense hardware and
software design to do your challenge for ONE scanner.....but for it to
be a profitable operation, at last a half dozen or more uP's would
have to be in the inventory.....so you're talking months of
development, maybe years, after which the damned things would be
outdated by the time they were brought to market.

Lastly....even if there were a market.....it could not be exploited
due to the FCC's declaration that "replacement microprocessors" for
scanners are against the rules. So one could not advertise, and even
so, it would be a matter of time before the Friendly Candy Company
found and thumped the poor, misguided bastard with a $20,000 fine
(per instance).

Thanks, but no thanks; I'll pass this time.

do not abuse the system of scanner listening. since some abuse, the
FCC decided to make private conversation scanning ILLEGAL. If no one
abuses like you, they don't make that kind of decision.

UHH... following up my article again.

If you are in Japan, you can use HF band without CW qualifications as
follows:

Under 10MHz, power restriction 10W

Above 20MHz, power restriction 10W

Above 30 Mhz power restriction 20W

you mare NOT transmit CW without CW qualifications.

I am sure that this is accurate.

Yes they do. You've implied that this practice is verboten
however it is quite acceptable per credit card policy. Cash
discounts are a non-issue. It's the advertising of credit
card surcharge that is forbidden by VISA or Mastercard. The
end result is nevertheless moot, as it only takes simple
rewording to circumvent this issue.

Cross-posted to: rec.radio.scanner,alt.radio.scanner

I've been trying out several radio control programs
with my Pro2006/OS456. I keep hearing about Probe 3.0
being a good choice, but they don't seem to offer a
demo version.

I've been burnt before buying software sight-unseen,
So I am naturally wary.

Is there anyone in Vancouver/Victoria that would be willing
to show me their copy of Probe V3.0 runnng?

..Gary

Yes, but it's not really a joke! It's true! Somewhere, someone
doesn't like what you're doing at any given moment, and they're trying
to pass or have already passed a law on that subject. The only reason
you're not in jail is because you haven't come under the roving eye of
law enforcement at the same time they're aware of the law and said law
enforcement official is having a bad day or needs to reach a quota.
If/when the US Code gets online and widely available, watch your ass,
because then it will be easy to look up anything. Yeah, there might
be some contradictory laws, but we'll never know.

William Lee replied:
Just what is it you are trying to say David? That you endorse and encourage
idiots to go and disrupt portable phone calls, is that a young new idea? Or
is it that being proud of a difficult achievement is wrong and thus its a
sucking attitude on the part of the achiever to speak proudly about it?
Have you never done anything that you are proud of? Have you graduated high
school yet? That is an acheavenent yet others may say that high school also
sucks. Do you really feel that the CW requirement is keeping you out of Ham
radio? Nothing worth anything is free. You get out what you put in, David.
Its a lesson in life that most of us learn sooner or later. Stop blaming
others for your shortcommings and go after the things you want. You may
find that the rewards are sweeter than you think. As the song goes "
Freedom is just another word for nothing left to loose" what ever that
means. (just thought I would toss it in to see if it fit the thought
thread)

Just because it "illegal" does not mean it is wrong. In the past, the United States government said that slavery was legal. Our legislators do NOT read the legislation which they force onto us. Like many citizens, they vote purely based on the name of the legislation. Trent Lott is among the worst of them, the bastard. Dick Gephardt is another one. Sons of bitches, most of them.

As it stands, blocked frequencies refer to the cellular frequencies that are illegal to listen to. You know.. the ones where so and so is talking to so and so about this and that. If you try to program them into a blocked scanner you get an error message instead of a conversation in progress. Since it is illegal to listen to these frequencies the logic follows that it should be illegal to make a scanner that receives them. So it is. Do you get it now? Oh Yeah..... The blocked frequencies are 860mhz to 849mhz or some where around there.

Hello, does anyone have any "unpublished" hints or advice on using my SportCat 150. Such as, hold down the WX and the L\O key while turning the scanner on and you will receive the battery level\charge.

Is there any way to have the screen light up continuously instead of just 15 seconds? Other things like that is what I'm looking for. Thanks for your help.

:plastic key pad. It comes with the original box and a pro 2004 manual.
:Backlit lcd works perfectly as well as everything else. Only $270 us funds.

All PRO-2004s are "cellular ready" since it is only a matter of removing
or adding a diode. You might be interested to know that all PRO-2004s
are actually 400 channel scanners. For some reason Radio Shack included
a diode programming function that locks out 100 channels. By the same
method as cellular restoration you can recover the use of memory channels
301 to 400 and sell your scanner as a 400 channel unit.
I apologise for wasting your time if you already knew that.

Barry

If you are talking about "cloning" your phone, forget it. Changing the ESN in a cellular radio voids it's authority to operate in the US (FCC regulations),and, many states also have laws making it a felony to modify an electronic serial number.
Also, changing an ESN will void the manufacturer's warranty and/or any extended warranty or service agreement. It may also be grounds for your cellular service provider to suspend/cancel your service.

To combat fraud, most cellular systems in major markets utilize RF fingerprinting, rendering a second "cloned" phone totally useless, because every radio transmitter has a unique signature. Most newer phones also use Authentication, another method of fraud protection. Check with your service provider as to what systems are being employed in your area.

While there are plenty of people offering to "clone" a phone for you, they offer no guarantee that it will work, and say that they will be held harmless (not legally liable) for any CRIMINAL or CIVIL penalties you may suffer if your phone service is terminated. In other words, the money you blew having them change the ESN goes into the big toilet. Then, the phone that had it's ESN changed is totally useless.

Most service providers offer additional cellular lines with call fowarding, with one phone bill. This is the legal and safe way to have a portable and a bag/car phone.
Considering the trouble you could go through with cloning, get your second phone programmed with a new phone number, and add it as a second line. Your service provider will usually do this for free if you add a second line.

Regards,

E Bagby

Uh, oh! It looks like the merry band of trolls and foul mouthed flamers from DataBasix (databasix.com) has invaded your NG. They seem to be the modern-day reincarnation of the old alt.syntax.tactical wrecking crew.

The Appropriate complaint address for DataBasix staff members posting their abuse from Netcom accounts (as most of them tend to do) is:

abuse@netcom.com

You might also wish to Cc: the upstream contact for databasix.com on those complaints, too. (Complaining to databasix.com itself is a total waste of time, since the sysadmin, Gary L. Burnore, condones the abuse). The contact person is Tim Wicinski (415) 967-0689 and his e-mail address is:

tim@meer.net

2582. Finding Group Numbers/Fleets & Sub-Fleets

Newsgroup: rec.radio.scanner
Date: 1997-05-28 00:00:00 UTC
From: ke4yqz@mindspring.com
Message-ID: <338c6a2c.683747@news.mindspring.com>
Source record: 196307

Having received my BC 235XLT (Trunk Tracker) this past Friday and today is Wednesday, I am extremely impressed with this radio.

I travel through Atlanta every day going to/from work. A few friends of mine also have the Trunk Tracker, and we decided it would be much easier to create our own Group Map of the City of Atlanta, Fulton County, Cobb County, DeKalb County, and Gwinnett County if we formed an unofficial 'club' of sorts, where we all attack one county at a time as a group instead of individualy.

We use BBS software to update each other on new group numbers and assignments. From there we each maintain a master file of this information so everyone's working off the same sheet.

It didn't take a Harvard brain trust to figure out that a group effort at find this information would be a lot faster and efficient than one person trying to do it alone.

It seems obvious enough, but for those who reside in or near the larger cities (Los Angeles, New York, Chicago, etc) I would recommend you find others in your area with similiar interests and a Trunk Tracker and combine efforts.

Although Atlanta certainly doesn't have the number of trunked frequencies that these larger cities do, I am constantly amazed at how group numbers there are for this city. Trying to tag/identify them all is going to be quite a task, and I can appreciate you that live in these huge metro areas are about to go through.

Now I know I'm probably going to get hate mail from some of you out there for stating what would appear to be the obvious, because those few of us here in Atlanta were going to go it alone until we found out just how many sub-groups the city and metro-counties were broken into. Quite a task even for three or four people.

The only reason I post this (obvious) suggestion is to try to save many of you a lot of time and effort in trying to get your area mapped so you can really start to appreciate just who it is you're hearing on your new

radio.

In our case, and we're lucky, in that our companies/supervisors don't have a problem with us listening to our radios while we're working. None of us have the kind of job where we deal with the public for 8 hours a day. But as long as we crank out the work, they don't have a major problem with it.

A short note: I want to make a very public and sincere thanks and debt of gratitude to Greg Knox who designed thTrunk Tracker and released it to the scanner community. I can't recall having this much fun with a scanner in a long, long time!

Further, a public thanks to Uniden for making what I consider to be simply an outstanding scanner radio. There's one part of downtown Atlanta that I travel and it's intermod city. Every radio I own from the PRO-2006 to my Kenwood amateur VHF/UHF radios all go nuts in this one 1-mile stretch of interstate going through the center of Atlanta. I've listened now for three days to Atlanta trunked going to and from work and the BC 235XLT didn't miss a beat. Absolutely _NO_ intermod in this one stretch of Inter-mod interstate.

In my opinoin, and regardless of what you happened to have paid for your BC 235XLT, you got a hell of a deal and can look forward to many, many hours of absolute enjoyment with this radio.

Warm regards to you all, especailly Greg Knox, and good scanning.

I suppose I could have mentioned that (the speaker that is) but decided
it was sort of petty so didn't.

I don't personally care for the quality of the sound except in the
house.
So whenever I walk out the door, I grab my headphones and
away me and the radio go.

A few of you might remember the column my Mrs. wrote in
US Scanner News prior to them folding. Well, with humor added,
the stories were true, and I do drive around in my yard, riding
lawmover chugging along, with me and my scanner, headphones,
and the TS mag-mount scanner antenna sitting atop the mower.

Me and my scanner(s) go everywhere together except a very few
select places which I'm not prepared to mention on this forum [smile].

Anyway, the point being that an el-cheapo set of headphones will
more than make up the difference.

Bill's scanner books contain information on just about every possible
modification of which you could concieve, and then some. Needless to
say, book 2 improves on book 1, and honestly, some of the
modifications in book 1 look primitive compared to the improvements in
book 2. Back with book 1, the memory expansion was quite a
spit-and-bailing wire thing. Now we've got computer control. I found
book 3 in a Barnes and Noble, so I had a chance to preview it before
purchase, unlike my experience with 1 and 2. I am not disappointed at
all with 1 and 2, by the way. I'm just glad that I waited for all
three books to come out before I made a decision on whether or not to
go with the computer and memory modifications. Even so, I may go with
the more expensive option of having someone else to do it.

2595. AR8000, Output for Decoding data ?

Newsgroup: rec.radio.scanner
Date: 1997-05-28 00:00:00 UTC
From: Miro.Ivankovic@guest.arnes.si
Message-ID: <03F4anvrhw3U@stenar.arnes.si>
Source record: 196320

Hello,

With my ar8k I wanted to receive, (because of latter decoding), CW keyed (carrier only) data, with keying frequency nearby 5 kHz. However, I'd like to add a jack on it and therefore I'll be very happy if somebody could give me any advice on this.

- where can be taken this signal from and which is the best point inside ar8000 for this ?
- could be used in this case the FFC audio output (pin 2) ?
- is the headphone socket adequate for decoding data ?

Anyway, what is your experience on this ?

If I missed something, please let me know!
Thank you very much for the help and any information.

Best Regards,
miro.ivankovic@guest.arnes.si

: goes at random. Any help with this will be greatly appreciated.
The typical prb with Minitor I's is the battery box. You may want to make
sure the contacts are clean inside the box itself as well as reflowing the
solder on the PC board connections (be careful !). The battery box can
be obtained from any MSS or NSO or removed from an old director pager (blue
ugly tone+voice obsolete pager - the color will not match though)
Good luck! (or buy a Minitor II)

New Scanner Users FAQ

In light of the repititious nature of newsgroup activity and the abusive replies that sometime follow, I took it upon myself to create this "FAQ" to help cut-down on unnecessary activity. I am not Big Brother...nor am I attempting to regulate control or moderate these newsgroups. It is simply another way for me to help add enjoyment to our hobby.

If it is received positively, I will make every attempt to post it on a regular and timely basis to ensure all beginners have a fair opportunity to see it and make use of it.

Revisions since the last posting are marked with | along the right margin

This document is composed of the following sections :
What's Illegal
Cellular-capable Scanners
Look Before You Post
Don't Ask What The Best Scanner Is
Magazines & Newsletters
Scanner Models FAQ
Scanner Dealers FAQ
Courtesy

What's Illegal

In its simplest form, US Federal laws(Communications Act of 1934, Electronic Communications Privacy Act of 1986, Telecommunications Disclosure & Dispute Resolution Act of 1992, Digital Telephony Bill of 1994) make it illegal to

1. Repeat what you hear to anyone but the transmitter or intended receiver of the transmission
2. Use what you hear to aid in the commission of a crime
3. Use what you hear for personal gain
4. Listen to transmissions relating to the following services : cellular phones, cordless phones, public land mobile systems, paging services, satellite/microwave/studio-to-transmitter links and broadcast point-to-point relays.

Recent developments in the Gingrich fiasco have also prompted Congress to revise its interpretation of certain laws. They now claim that it is illegal, and thereby punishable, for any person or company to alter a radio so that it may receive cellular frequencies.

There may also be state or local laws which you should make yourself aware of. Most pertain to usage of a scanner outside of your home(some locales make it illegal to use in public or in a vehicle of any sort.) Here's a link to Todd Sherman's informative site that gives you the | low-down on state and mobile monitoring restrictions : |
|
http://www.afn.org/~afn09444/scanlaws |

Cellular-capable Scanners

Provisions to the above mentioned laws make it illegal to produce or import for the purpose of sale, radios which are able, or can be easily modified to pick up cellular phone frequencies.
Therefore, after April of 1994, no new scanner for sale in the US is capable of receiving cellular phone frequencies. The only way to find a scanner capable of receiving cellular is to buy one made before this date which has or can be modified, or to import one from a dealer in Canada Europe or China/Japan. If you choose to import, you do face the risk that US Customs will detect said radio and they do have "legal authority" to confiscate it without reimbursing you for said loss.
One minor exception to this is the AOR AR8000 which can have its frequency bandplan modified via PC software. The US versions come with a bandplan that blocks the cellular frequencies. Simply downloading a bandplan without this block restores this range of frequencies.
Developments with the Gingrich fiasco have the FCC looking closely at this radio to remove this capability since it falls under the "easily modifiable" category.
So in short...don't bother asking which radios can receive cellular or can be modified to do so. Except for the AR8000 mentioned above, there are no hardware or software keypad tricks to modifiy US radios. Period! Buy a used one which can be modified or take your chances and import one.

Look Before You Post

If you hang around the newsgroups for any length of time, you're bound to see the same questions asked repeatedly. Even the stauchest supporters of the hobby get tired of answering the same questions over and over again. Those of lesser maturity will even assault you with less than civil verbage.
My advice is to do your homework first. Follow the newsgroup to see what is going on. See what the recent developments are. Get a pulse for what is happening in the hobby and the industry overall.
The probability is that someone else has asked the same thing you did in the not so distant past on the very same newsgroup. Start by pointing to http://www.dejanews.com/ with your web browser. This very nice service allows you to search the recent newsgroup archives. Simply type in what you are looking for and see what shows up. The more recent postings show up first with the original poster and the subject header listed. Be sure to try word variations(e.g. if searching for postings on the Radio Shack Pro-60 scanner, try "Pro-60" "Pro60", "Pro 60", etc.)
Looking for more information on a radio or accessory? There are tons

of web sites out there with lots of information for free! Start by pointing to http://www.yahoo.com/ with your web browser. This is just one of many web search services allowing you to locate web pages containing items of your specification. As mentioned earlier, when performing a search try using variations to maximize your chances of finding what it is you are looking for.

Don't Ask What The Best Scanner Is

Almost once a week, someone will post a message that says something like "Which scanner should I buy" or "I want the best scanner there is" Well, well. That's a lot like asking "I want the best car". What does that mean". Best as in cheapest? Best as in gas mileage? Best as in fastest? Best as in crash protection? Ask ten people and you'll probably get ten answers. Having done this, they are no closer to an answer than they were before.
And it's amazing how many are surprised when they get responses that list appropriate radios and find out they usually cost $500 - $700! This only goes to show that they had no idea what they were getting into and had done no research on their own. To all these people, I would like to offer up some fine deals on real estate in central Florida.
After using DejaNews to keep up with recent developments and which radios are well-liked and which aren't, and Yahoo to look up manufacturer specifications on radios of interest, you're probably ready to post to the newsgroup to get details from the people who have actually purchased and used them.
Tell everyone what it is exactly that you are looking for. Give specific details and features. Tell what price range you are looking in. List the radios you have been researching. List the pros and cons from your "uneducated" point of view.
You'll get many replies from people who will give you their point of view. Try not to take any one person's answer as gospel. Be wary of those who proclaim "stay away from Acme Scanners...they're all crap" etc. You should be able to get a feel for the true nature of a radio...whether it's a good one, mediocre or a real dog. Some responses may even list other radios you might want to consider.

Magazines & Newsletters

There are a number of periodicals which exist that can help keep you up to date on the latest activities in scanning and radio monitoring. Listed in no particular order are

Monitoring Times
Popular Communications
The Scanner Club
National Scanning Report
Bearcat Radio Club

Unfortunately, due to hard times, RCMA and US Scanner News are no longer with us.

There are also a large number of regional clubs that hold meetings
and exist to swap information and frequencies all to increase the
enjoyment of the hobby!

Scanner Models FAQ

An important FAQ written and maintained by the author lists a large
number of scanners both past and present. You'll find a listing of
manufacturers and their current models, along with specifications and
inside tips.
Try going to the web page listed at the bottom of this page and then
to my Radio Monitoring page.

Scanner Dealers FAQ

Another FAQ written by yours truly lists a large number of dealers
who carry scanners, communications receivers, HF gear, books, accessories,
you name it! There are addresses, phone numbers and web pages listed.
This is a great way to find out what's on the market along with pretty
specs and pictures of all the hottest radios. And when you're ready to
buy, all the information you need is right here. And using mail order,
you can expect to save 10% to 20% over what you'd pay in your area.
Try going to the web page listed at the bottom of this page and then
to my Radio Monitoring page.

Courtesy

Above all else, let's try to act like ladies and gentlemen. It is all
too easy to misunderstand the written word. These days there is simply
too much bandwidth being wasted with personal wars and flaming. It is also
very easy, considering the level of anonymity involved, to forget that
there are real people behind these words. Just because you are not in a
face to face discussion with an individual does not give anyone more
of a reason to be disrespectful.
Let us all try and be as considerate as possible. Ask someone a
question asking for clarification if you are unsure. If it does turn into
a personal battle for whatever reason, take it offline with direct e-mail.
You'll gain no one's respect by wasting bandwidth bad-mouthing someone
else and using foul language.
Take a deep breath, count to three...

Thanks for reading this. If anyone has other topics they feel would be
relevant to put here, just send me e-mail with your suggestions.

Strong signals to all!

Rich Wells

David,
Perhaps you should look at my add again. It includes an extra battery($33), Leather case($29), and Cigarette lighter cord($13). If my math is still good that means your getting a new scanner with 10 months left on warranty, a total value of $415.00 for $350.00 and that includes shipping. What part of this are you having trouble with that made you waste your time with your comment, as if people wouldn't know without your help, get real! If you wish to buy it from Scanner World and pay the extra $65 plus shipping, be my guest, otherwise find something else to do.

Jack Mor (jackmor@iglou.com) wrote:
: My location is northen Cincinnati (city of Blue ash), if I buy the Trunktracker what can I hear in my area ?
:
As mentioned in some of the posts Warren Cnty is the most active
with Union Twp and Montgomery Cnty (Dayton) also being some other
local dedicated PS systems. CG&E alos operates a 800 system and some of the
local cities use 800 commercial SMR for their "city" radios

: Should I wait for the county to change to trunked system.
I doubt that the cnty will go 800 any time soon since there is no funding
for the project even though they do have a license (construction permit
just about to expire - sales tax levy died twice and cnty comish decided
not to try for a third - the system was 77mil and 40 chan - not even LA
cnty spent that much for a PS radio system !)
The freqs for the systems can be found in scanner books - look for the
buzzing to ID cntrl channels - the commercial SMR with the locals used to
be Mobilcomm's (now Nextel).

News helicopters do indeed transmit back to their base stations via microwave. This is used for both the video and audio sent from the chopper back to the station. You can monitor the 2-way traffic between helicopter and base (usually termed "ENG" for Electronic News Gathering). Many of the newer helicopter microwave systems have a tracking device on the receiving end that will allow the receiving site to "follow" the chopper as it moves. In order to do this, the station engineer must first "lock in" a signal from the chopper's transmitter. Once this is locked in, if the tracker is working correctly, it will track the signal and hold it in line as the chopper flies about. Without the microwave receiver, the only thing that can be monitored by a scanner is the two-way communication. For most TV stations this is located between 450 and 451 mhz.

>have to be in the inventory.....so you're talking months of
>development, maybe years, after which the damned things would be
>outdated by the time they were brought to market.

How tough could it be? The uP does a couple of things.

picks the frequency from the memory channel. (from external memory chips on
larger channel units)
takes inputs from the keypad.

drives the display. (this could be a pain)

tunes the actual radio

keeps the pll in check

>
>Lastly....even if there were a market.....it could not be exploited
>due to the FCC's declaration that "replacement microprocessors" for
>scanners are against the rules. So one could not advertise, and even
>so, it would be a matter of time before the Friendly Candy Company

I think that should be FCC= Frequencies..... Cash and Carry

>found and thumped the poor, misguided bastard with a $20,000 fine
>(per instance).

>
>Thanks, but no thanks; I'll pass this time.

How about this? The cell blocked radios of today have the 800 Mhz band all botched up right? Hold the uP be held in place at the bottom of the cell band. Make a device to bypass the uP output to the tuner and tune the tuner yourself through the cell band. Maybe even a VCO? Or step the VCO through with a counter and a frequency synth? You'd have to stop on a carrier which wouldn't be that tough because of the carrier operated relay mod I've seen around. The uP output to the PLL circuit may be different for each radio though. (this doesn't sound like something you want to jam inside of a hand held scanner)

Thoughts????

tyler

Source record: 196332

Like all scanners, the Icom R-1 is only as good or bad (up to a point)
as the antenna you put on it.

-- Put a long wire antenna on the R-1 and you can get decent (not
great!) short wave reception.

-- Put a 1.5 inch antenna (eg, Comet CH-32) on it and you get decent
(pretty good, really) 850MHz and up reception.

-- Intermod problems? (which is the major criticism of the R-1)--put
a crummy (ie, less sensitive for the frequency you are monitoring)
antenna on it .

Check out an incredible review of scanner antennas at

http://www.universe.digex.net/~bnr/antennas.html

put together by Brian Raines.

What more can you ask of a scanner that is smaller than a pack of
cigarettes with (1) .1 to 1300 MHz continous (with the proper mod),
(2) FM, WFM, AM, (3) tuning steps from .5 to 50 KHz, and (4) above
mentioned and other features?

After all that--Want to buy mine? <g>

No, that is not my point at all. I deal with some "old" hams all the
time on 27.385 LSB. They are cranky old farts who have nothing better
to do with their tickets. I am sick of the attitudes put forth by hams
who look down their old noses at everyone else.
Have you heard the many many out of control hams who constantly abuse
each other by doing all they can to disrupt communications?

These situations are doing a great deal of damage to the reputations of all hams before the FCC. The problems are getting worse too. Yet, those same idiots who abuse each other are quick to jump on any person who is not a ham for suggesting something that is illegal. It is time for these types of hams to move on and get out of the way of those who are new to the hobby or those who are more responsible before the FCC steps in and clamps down on the hobby.

Oh, you know there were "spies" in the crowd! I am begining to
believe that since the soviets are not much of a threat (for the
moment), the FEDS have too much time on their hands and lots of new spy
devices, so who else can they spy on, but the public here in the USA.
I may be wrong, but it sure seems this is what is happening.

[My first reply to you bounced. Will try one last time.]

RELM HS200. Best audio in a portable scanner I've tested recently.
Excellent value at $250 street price. Powered by 4 AA cells.
Lighted keypad and display.

From my FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

HS200: 1996 vintage. Very good 200 channel portable. 10
banks. Built-in CTCSS and DCS decoder. Lighted keypad.
Duplicate channel detection. 100 frequencies can be locked
out from search. Very good audio and strong front end.
Excellent internal shielding. Global rescan delay. Covers
CB. Fixed modes and step sizes. IFs are 280.2 and 0.45
MHz, and perhaps one in between. For a quantitative test
report, see "The RELM HS-200 Portable Scanner," by Bob
Parnass, AJ9S, in Monitoring Times, April 1997.

>You need to get to the bottom board and clip D-11 for full 800MHz coverage.

Reinstall the diode in the d-12 position and rewire the keypad switch to switch it in and out of the circuit.This will allow 12.5 khz steps in the 825-850 mhz range.Now you can tune the image of the 850-861 Public Safety band without those annoying
cell images popping in. Subtract 21.5 from the frequencies you want to listen to.

Ain't it a shame the FCC can't regulate me? I guess you'll just have to
put up with the select few that realize what your profession is all about
(or is coming to, at least). Of course, I'm sure that at some point the
feds will cast a law banning casual transmissions on the internet (without
a costly license, I'm sure) due to its volitile nature, and judging by this
post, you'll be more than happy to enforce said law because, "they told me
to."

I ordered a radio from the Ham Radio outlet in NH.They sent it out the same day
(Monday) I was told i would have it no later than Friday.Friday the UPS truck passed my house.I called HRO and they gave me the tracking number.I used UPS on line tracking and found my package in Salt Lake City ,Utah.I called UPS 1-800 number and told them my problem.I said why is my package in Salt Lake when it came from NH and was to be shipped to NYC?(both locations on the east coast!)
They said it was sent to Utah by accident,but now had lost the package in Salt Lake.HRO called UPS and received the runaround as i did.UPS said i had to wait 14 days passed the due date to have a credit issued for replacement.After 12 days
and a lot of a aggravation i received the radio.Let me point out that The Ham Radio outlet provided excellent service and did all they could do.The full blame goes to
UPS and it's people.This is not the first time i have had problems with UPS and
probably won't be the last.
UPS doesn't care!!! All the fancy tracking systems mean nothing if you don't have
competent people working for you.All i received was" Oh were sorry,we'll locate that package and get it right to you as soon as possible".About 20 times.
Your right UPS SUCKS!!!!!!!!!!!!!!!!!

Here's the unpublished stuff I've seen for the SportCat:

Power on with...

WX and L/O = Voltage reading
2, 9, MAN = Clears all memory channels
2, 9, L/O = Screen test
2, 9, PRI = Puts test freqs in 1-21
2, 9, SCAN = More test freqs

>I am looking to buy a good CB for my truck and am considering the above
>two models. Any opinions would be helpful.
Thanks for all the replies. To be more specific, what I want to do is get a set-up where I can scan on the CB and Marine band channels, and talk on the CB channels. What I am leaning towards now is to buy the Uniden Grant XL, and the BCT-7 Mobile scanner and set them up in my truck, and be able to set up the scanner in the house when I need to. I want to be able to set the scanner to only scan the marine bands when I want it to. Is this possible &/or practical. I spend a lot of time in June, August, and September near a fishing village in PEI, Canada, and need to know when Boats will be in, abd would like to be able to scan CB channels when on trips. Does anyone have a similar system, or a better solution? Is there a good CB Radio that scans those chanels?

Roger,
I let the guy know that I was visiting from Alaska and that I'd seen all the adds for thier store and I wanted to see the stuff in person. It was an older guy that I dealt with and he just kept giving me the cold shoulder.. The younger guy behind the counter was a little more helpful but, no very much. I've always felt that if I go into your store, I am helping YOU earn a living by doing business there. No matter how I dress, or what I drive up in, or what I look like, or for that matter, what license I have. If those guys were here in Alaska and looked at people that way, they'd lose a LOT of wealthy customers that carry a lot of money with them and expect good service when the go into a store.
To tell you the truth, I was treated that way in a lot of stores in the Atlanta area. I went to several computer stores while I was there and they didn't seem to want to help either but, the guys there at HRO were the icing on the cake.

I just know that whenever I come back thru Atlanta, I'll not go out of my way to go to that store AGAIN...

2658. Q: 800MHz Band Antennas?

Newsgroup: rec.radio.scanner
Date: 1997-05-28 00:00:00 UTC
From: Scott West <west_s*nospam*@ix.netcom.com>
Message-ID: <338BFDA1.52F2@ix.netcom.com>
Source record: 196383
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I'm looking for suggestions on a high gain 800MHz Band antenna for a hand held scanner with a BNC connector. Looking to pull in some weak signal trunked radio systems on a TrunkTracker. I'm currently using a modified cellular phone antenna, but am looking for other suggestions that would provide higher gain.

Anyone have any experience with the Max Systems "High Gain 800MHz portable antenna" that Grove sells?

http://catmac.grove.net/CGI.SPG?L=F&P=ANT+22

Or Radioware's "Seeker 800MHz Duckie Antenna"?

http://www.radio-ware.com/sek800.html

I'm also looking for suggestions for high gain 800MHz Band antennas for use in an apartment with a desktop scanner to aid in the fleet mapping of Motorola Type I trunked radio systems. The following seems small enough for apartment use:

http://www.radio-ware.com/rw800l.html

TIA,
Scott

>as base unit or as mobile unit?

i have the bct-7, i got a base antenna ,coax, and a couple of
adaptersfor the coax from radio shack. i don't think i spent more then
$35.00 . i live in an apt. and just have the antenna on the back porch.
it works a whole lot better then the back of set antenna that come with
the scanner.

My guess is they are either Type I or LTR, both formats that are dying.
Yes, you could program it to scan conventionally, but the cost of
obtaining the programming hardware/software would defeat the purpose.

For the same price of the programming aparatus, you could get a
Trunktracker.
I say, find someone who needs Type I or LTR or even conventional 800, and
sell them. Then, take the profit and buy a Trunktracker (they are awesome)
and keep the change or whatever.

Regards,

E Bagby

All,

If you folks want to discuss the parentage of certain federal agents fine, but start you own topic. I, for one, do not subscribe to the notion that ATF, FBI or other law enforcement officers are "thugs," either "jack-booted" or "gun-toting," and I resent your using a topic that I started to spread your venemous drivel.

John

> supposed to be on these radios.

According to what I've heard from other AR8000 owners, the BNC jack does come loose with frequent antenna changes.

You will need to get the radio apart and tighten a nut inside the case. It was further recommended the you use loctite on the nut to prevent loosening in the future. This is the best I can remember. I've had mine apart to fix the "sputtering squelch" problem, and can tell you right now that it is a little tricky.

There is a mailing list for the AR8000. I think that the address is <majordomo@ml.rpmdp.com>, and you should put <subscribe ar8000> in the body of the message.

The books by the subject author are DAMN good. They are packed full of information, modifications, and even a bit of history on scanners, make a fascinating read, and an even MORE fascinating APPLY. I have all three, and they are worth every penny I paid for them. I just got a real good deal on the third book, considering the amount of sheer information that is in it, including putting in 26,400 channels, a complete computer interface, information on the capabilities of many of the newer scanners, information on what test equipment and tools you need to work on scanners, (including how to build some of your own test equipment), and much, much more.
I have been buying and collecting books on radio for 40 years. I have amassed quite a library here. There is no book in the entire collection more valuable than the three Cheek books. They are more valuable than many, since they are unique in their thorough coverage of scanners and scanning, a subject that up until a few years ago, there was no information available on. Practical and informative. The first two books were "good to the last drop", and so is this one.

Louis Morong

2669. PRO-2021 Scanner Mod.

Newsgroup: rec.radio.scanner
Date: 1997-05-28 00:00:00 UTC

Message-ID: <5miedp$uag@coranto.ucs.mun.ca>
Source record: 196394

There's a mod posted somewhere on the internet for faster scan speed, expanded RX for 800 MHz but it doesn't work and I think Bill Cheek's book explains how to expand the memory.

I don't have any of these mods but I am looking for a selectable step rate mod. The scanner scans at 5kHz steps in VHF-LO and VHF-HI, 25 kHz in AIR and 12.5 kHz in the UHF band (380 to 512 MHz). The step rate is band dependent on this model.

Does anyone have a schematic or service manual so they can see if a switch can be added to manually select the logic for the step rate?

This would be very useful for someone with the PRO-2021 and a GRE Super Convertor setup (806 to 912 MHz). Some usages in the 800 and 900 MHz band use step rates other then 12.5 kHz.

Can anyone help me out?

Also ther is a microscopic filter of some sort that goes from the
connector to the circut board and usually breaks when the connector
comes loose.

I can understand your anger at feeling like you were not welcome. I would be upset as well.

I worked in CA for about 18 months and frequently visited the HRO stores located in Oakland and Santa Clara/San Jose. I always found the sales staff at the stores helpful, friendly, and quite knowledgeable. Of course, like every where else, some of the staff was more friendly than others.

I have also had the chance to call them by phone and found them quite helpdul as well, which is not always common in the retail world.

I'm sorry for the experience that you had, and obviously it wasn't a happy experience. When a customer walks in to any store, even if he is just window shopping, he should be treated with respect and in a professional manner. By the way, the staffs in the store deserve the same respect from the customers.

Hope this doesn't prevent you from trying the same or another HRO. It's a first class operation and I'd recommend them.

I once used Loctite on the case of my Ar8000 and it caused the case to weaken and crack. I ended up replacing the case. Be careful.

Probably an easier task would be to read the programme in the uP (if possible) and hack the original code. Hopefully such a task would only require lifting a couple of pins off of the track. I've never attempted this but I know many micros can be read easily. I don't know if this would break too many laws and finding the right bytes to hack would be quite a challenge!! <G>

Cheers!

> though. (this doesn't sound like something you want to jam inside of a hand
> held scanner)

This would probably be an easier bet than the first. I've designed a circuit that will do just this. It's kinda involved and requires some modifications. But if I were to mass produce this thing I would probably need to sell if for at least 150$USD to make it even slightly worthwhile. It also decodes the data stream from the cell site and dumps ESN, NAM and SYSID information to the display. It will track

cellular calls too. 8-D

Cheers!

>
>Any opinions on which is the best computer innerface hardware/software
>for the RS 2006? Any info would be helpfull.
>Thanks,
>GW

GW-
There are two main options that are available for interfacing the RS Pro-2006 with the computer. There is the CE-232 from Cheek Enterprises and the OptoScan OS456 from Optoelectronics. The CE will run you about $150+s/h and the OS456 will run you about $200+s/h. There is also a OS456Lite version which will do the same as the OS456 but without the CTCSS/DSC/DMTF decoding, but is a bit cheaper.
The CE-232 does require some decent wiring/soldering skills. Different software is provided to you or you can download off of various sites. While using the computer, this interface uses the scanner's memory and and CPU. If you have the 2006 modified for cell, then the CE will access those freqs. Memory is the scanners 400 channels unless memory modification has been done to the scanner. With memory modifications the 2006 is capable of 25,600 channels in its memory. Speed is dependent on the scanner. This interface can program the scanners internal memory from the comma-delimited ascii databases that you have on the computer. You are able to unhook the scanner from the computer and use the scanner with these programmed channels. Frequencies are able to be imported from FCC frequency database files.
The OS456/OS456Lite require you to make two solder connections. The OptoScan boards use their own CPU and disables the scanner's CPU and memory while you are using it with the computer. When not using the computer, the scanner returns to using its own CPU and memory again. The OS456 can not program the scanner's internal memory. The OS456 comes with some demo programs, but the best program (IMHO) is Probe. It will run on about any computer that will run MS/PC-DOS 3.3 or higher. You will need to pay extra for this software. Buying it within a few weeks of the OS board you will pay about $90+s/h or if you buy it later it will run about $130+s/h. Probe will allow you to have up to 4000 files, each with 99 banks of 1,000 channels each (i.e. if you only use one file, you have 99,000 channels). This is due to the fact that the computer stores the channels..no memory mods to the scanner are necessary. Scanning speeds are dependent on the computers CPU speed. This interface will run faster than the scanner could itself in most situations. You may import frequencies from FCC frequency database files for use in this program. The OS456 interface will not program the scanner's internal memory. If you have two frequencies programmed into the scanner and then you have up to 99,000 when you are using the computer...when you turn off your computer and unhook your scanner, you are back to the two frequencies. Most likely you will not be able

to get a unblocked OS456 board at this time. If your 2006 gets cellular frequencies and you start using the computer interface, you will not be able to scan cell freqs. Turn the computer off and you are back to receiving cell. This is because the OS456 comes with its own CPU and disables the scanner's CPU during computer operation of the scanner as I mention earlier.
What is the best? Hard to say...each has its features that make it stand out in different areas. I wasnt able to pick up a 2004/5/6 for a decent price so I went with a Pro-2035/OS535/Probe setup and have been very pleased. The CE is a bit cheaper and software is obtainable with a download, but you provide the work of putting it together and installing it unless you have someone else that will do the work for you. There is also cost/work involved for doing the memory mod. The OS can get you up and running in a shorter amount of time, but you do loose the scanning speed and memory once you turn off/disconnect the computer. Hope this helped a bit more than what it confused.

I've been slowly putting up a site for my hobby of scanning. There have been a few ppl that have asked me about frequencies for the state. Right now I do have all the frequencies (25-1300Mhz), by county, in ascii format. You can pull these up in notepad or wordpad and print them out. I also can e-mail ppl the databases in dbIII format for importing them into various scanning setups. I use the Pro-2035/OS535/Probe setup and importing frequencies is as slick as can be.

Right now I havent had time to put in the Radio Service Code document, but it will be there shortly. I'm still anticipating the Highway Patrol going to a center-hubbed dispatch system in the near future. I need to talk with a few of my trooper buddies to see what the crystal ball holds.

Ronn,
If you don't have an OS535 by now, chances are you will NOT be able to find one that is capable of being unblocked (new). Specifically, I believe the cutoff date was 1 Jan 97. Any 535 manufactured after this date will be unrestorable.
Sorry to have to tell you this...

Sincerely,
Robert McIntyre

Actually.....If you have anybody to gripe at is HRO. Because they are the paying customer of UPS, they can file a claim at any time past a normal delivery window. If HRO is not willing to help you out (Send you a new one out ASAP), don't yell at UPS, yell at them. Sounds to me like HRO does not want to do the necessary follow-up to ensure quality customer service. It's their job to track, trace, and file claims, not it's consignees! It is true that UPS misroutes and misplaces packages, but if you consider the amount of packages handled by this company you would realize that they have a very high sucess rate. Besides, if HRO really wants to make sure their products are delivered safely and on time, they should use FedEx.

Great. I choose to respond to you in public, though, since you opened
the seamy side of the topic and raised issues over which I have
nothing to hide.....but definitely a lot of pride.

> For the record, I do have a few of your books and newsletters, so my

Oh. How do I do that? And how can I do it any different? Better
still, how would YOU do it, if you were walking in my moccasins?

> Your comments on the newsgroup validate my belief that your knowledge of
> scanners is surpassed only by your presumption of your readers'
> stupidity...and I don't buy into your "poor me, I'm really just a
> starving artist" routine.

Huh? No, I'm not starving, but I have a feeling I would be, if I
followed your Path of Enlightenment. But I would like to entertain
your suggestions on how my work could be done any better. And I won't
even offer opinions on how you can do your work better.

> In your posting you state you were paid a total of $1250 for your
> first two books and never saw a dime beyond that.

Yes, that is correct. Would you like to confirm that with the
Publisher? Please feel free to do so.....

> Do you expect anyone with a brain larger than a rice crispy to
> believe that you bought all those scanners, spent countless hours
> ripping them apart and doing your research, and then spent many more
> hours writing it all up, for a stinkin' $1250??? Spare me the bullshit,

I'm a telecommunications engineer and computer systems consultant.
Scanners are not my main trade.....more my hobby, like yours.

> Bill! You've made boatloads o' cash!

Ha ha ha ha ha ha ha!!!! In your dreams, yeah. I used to be like
you, years ago......envious as hell of everyone who ever had their
name on a marquee, masthead, or byline. I just knew they were filthy
rich. Ummmmmm.....not in the radio business, they're not. But
tell ya what, fella, you have my permission to contact Tom Kneitel,
the publisher of my first two books and ask HIM how much I made off
those two books. $500 on the first and $750 on the second. Go ahead,
I dare you to ask 'im. You ain't got a hair in your sweet patooty if
you don't.....

> I stand on my original premise that greed is a big motivator
> for why you do what you do.

Are you nuts?

If not, then tell me how YOU would do things, if the shoes were on the
other feet. Surely you have some brilliant ideas that have escaped my
"rice-crispy" brain?

> It's a good thing you know your topic so consummately well, because
> your power of pursuasion SUCKS.

Oh gosh.....I wouldn't want to pursuade you of anything. I'm not a
politician. I loathe politicians. However, you've pursuaded yourself
just fine. I just want you to make a stand on a better way for me to
do things, since you took the time and trouble to open your yap.

Or was it just to change feet? :-)

And the hell of it is that it AIN'T a living. Barely pays the
freight, and that's controversial........ In this business, you
pretty much labor for love or you don't play. Sometimes there is a
little shower of pennies, but that don't go far........

Like I told that other feller, who as much called me a liar, I got
$1250 for my first two books and that was that. Anyone who knows CRB
Research Books, Inc. knows good and well they don't pay royalties.
And they don't pay beans on the flat rate side, either.

> Why does the manufacturer edit out other bands like
> FM, CB, etc.? -Justin Smith

All those "missing" bands are not 'edited' out. They're NOT designed in, in the first place.

A quality receiver requires considerable design and optimization for the bands it is to cover. The more bands, the higher the cost. Manufacturers cut corners to keep the price down to a level that will sell the scanner. There is no room to add extra circuits for the bands of lesser interest........

Usually, the top-of-the-line scanners have more or less full coverage, though.....but you have to pay the price.

>Milwaukee, WI area.

Personally I wouldn't order unless they are definately in stock. About 2-3 years ago I paid for the subscription to PRSG with the understanding that the repeater directory would be sent to me as soon as it was available. Unfortunately, month after month for more than a year, it was in final proofing, ready to be sent to the printer, blah, blah, blah.

After a couple years of nothing I've pretty much given up on ever expecting it. But who knows, maybe it will come someday after all.

Is it possible to modify a scanner to receive signals (NON CELL PHONE)
out of the ranges it was designed for? Specifically a Radio Shack
Pro-33 to receive between 174 MHz and 380 MHz.
What is the legality of ANY scanner modification?

Thanks.

>What is a trunk tracker?... , just point me in the right
>direction where I can learn.

The TrunkTracker is the name given a new line of Uniden/Bearcat
scanners. In addition scanning conventional radio systems, the
new scanner(s) can follow conversations in popular types of
800 MHz Motorola trunked radio systems. Trunked systems organize
users into talk groups or fleets, and multiplex their
conversations across a set of frequencies.

I wrote a review of the BC235XLT portable TrunkTracker for
July 1997 Monitoring Times magazine, but you can read it now
by following the link on Grove Enterprises' home page www.grove.net
or directly at:

www.grove.net/mtequipparnass.html

In addition to my product review, there's an earlier MT article,
written by another author and available at:

www.grove.net/trunktrackersmt.html

It discusses the BC235XLT's trunk following abilities in more detail.

Popular Communications, N2MCA, and others have (or will have)
reviews, too.

Actually, all GMRS users I've heard have never given their callsigns. I
have heard the local repeaters send their IDs, but never individual users.

The Radio Shack I go to most often claims to sell FRS radios as fast as
they can get them in. The manager advised me to inform him when I want
to make a purchase so he can hold them for me. Activity locally is
there, with traffic somewhere almost daily now.

The NorthEast Ohio Monitoring Association, in cooperation with several area TV Stations and Paging companies is now forming...

The NorthEast Ohio Paging Network!!!

This paging network is very similar to the ones found in other parts of the country like NYC, Chicago, Colorado, etc...

The network is designed to send Alphapages for the following types of events:

Major Fire Incidents
Major Police Incidents
Rescues
Haz-Mat Incidents
Major Accidents
Local and Regional Disasters
Major EMS Incidents
Local Weather Warnings
Local and Regional News Events
Local Traffic Tie-up Reports

In these areas:

Akron/Canton Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

Cleveland Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

Youngstown/Warren Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

We are looking for monitoring enthusiasts in all of these areas who may be interested in becoming monitors for the network.

For more information please E-Mail:
jwhitinger@worldnet.att.net

This is a magazine. A Hard-Copy. No online stuff.

Personally I like actual magazines better then getting "magazines" via email.

that's just me

One positive suggestion for the WSR:

I need a comprehensive index that does more than list the articles. For example, some articles have a correction follow-up, then is followed by another article on the same subject showing a much better way negating the first article. A simple index does not allow me to follow the thread very well. How about a better, smarter index that will allow correlations between the articles rather than just a simple listing.

Mmmm ??

The UBC-9000XLT has continuous coverage from 25-550MHz and 760-1300MHz.
Only "Gap" being 550-760Mhz.

IF he answers his door.

I have sold 5 scanners via the internet and have yet to be cheated,
mainly because I insist on the money order being in hand and cleared
before I ship the scanner. That is the only way to do business and those
buying a scanner from someone on the internet realize this.

2728. BC 200xlt Battery Dead?

Newsgroup: rec.radio.scanner
Date: 1997-05-29 00:00:00 UTC
From: jms20@po.cwru.edu
Message-ID: <19970529163135230730@x-wing.lit.cwru.edu>
Source record: 196115

Greetings,
It seems that my 200xlt has become an unhappy camper... At the end of last week the battery drained out (like it has many times...) and I hooked it into the wall to charge it...only it doesn't seem to be charging. As long as the battery is plugged in to AC power the scanner works, but if I unplug it all I get is a soft clicking sound from the speaker.

Does this mean it's time to buy a new battery pack? Can I simply replace the NiCad pack?

Any help would be appriciated!
-John

WRONG CONGO BRAIN....jungles in your coffee

Guess what this has to do with SCANNERS?

Class, anyone have an idea how this issue affects this group?

No one knows.

Been watching tv again class?

OK...do you see the many mentions of "Scanner Dealers" in most every other tenth or so post?

OK....

What do they have in common when a SCANNER fanatic or just someone who wants to upgrade his "income base" orders a S C A N N E R?

Class? Bodies? Fixtures? Heads? Zombies? What is it?

Do you now understand?

That is why UPS has to do with S C A N N I N G.

Any questions, see the instructions.

2743. Trunktracker disappointment

Newsgroup: rec.radio.scanner
Date: 1997-05-29 00:00:00 UTC
From: jlicata@webex.net
Message-ID: <09970429173126.OUI83.jlicata@webex.net>
Source record: 196130

After waiting over 3 months, my Trunktracker arrived. The systems I wanted to track are in the 502 MHz and 938 MHz ranges. To my utter amazement, the Trunktracker will not track trunked systems in those ranges. Page 35 of the operators guide states " If you enter a non 800 MHz trunked repeater output frequency, an error message displays" A call to Uniden customer support confirms this. I do not recall seeing this restriction mentioned in any product review or product specification. I would think that someone testing the Trunktracker and writing a review of this product would have noticed this.

The bottom line, until someone comes up with a mod to enable tracker on ANY frequency, this product is useless to me.

LET THE BUYER BEWARE

Joe

Well, considering there is not "supporting circuitry" in this radio the
only thing you are modifying is the frequency readout. The
modification simply doesn't work.

> This is a speed-up mod for the slow 2021 that does work. It will increase
> the scan speed to about 11 channels per second. It has no effects on the
> delay time.

Yup, I did this one years ago. Many scanners use an R-C circuit as a
crude timing reference. They could use the PLL reference but typically
it is too high a frequency for the CPU to handle. My friend had a 16
channel Realistic scanner (can't remember the model number), anyway
after this mod' his was scanning about 25 ch/s from a stock 8ch/s. Not
bad! Bud I could never get the PRO2021 to speed up this much. About
11 ch/s was it.

Cheers!

There are three versions of the OS535. The boards are the same, but the CPU's are programmed differently. 1) Cell Blocked, Code Enabled: cannot receive cell freqs unless you are able to obtain the cell enable code. 2) Cell Blocked, No Code Possible: cannot receive cell freqs, code will not enable. This is the board/CPU configuration that has been manufactured since JAN or FEB 1997. 3) Cell Unblocked: for FCC approved or licensed telecommunication techs. It will receive cellular freqs without needing enable codes.

2750. QUICK HELP!!!

Newsgroup: rec.radio.scanner
Date: 1997-05-29 00:00:00 UTC
From: RareBear@webtv.net
Message-ID: <5ml4ro$ai7$1@newsd-199.bryant.webtv.net>
Source record: 196187

I am going to Las Vegas tomorrow.. I already have all of the freq's I need, but I have a stupid question...

I am building a cigarette lighter plug for my BC-890 to go in the rental car. I have the power plug for the back of the scanner, an inline fusible link, and the cigarette lighter plug. I used to have a plug that I bought with the scanner, but I lost it.

I need to know which terminal in the lighter plug is positive so I dont cross the polarity. I know the polarity of the power connector end but I am unsure about the cigarette lighter end...

I would expect the center electrode to be positive, but it is not worth the risk if I am wrong... please help... please email me direct...

2751. Re: How do Image frequencies work??

Newsgroup: rec.radio.scanner
Date: 1997-05-29 00:00:00 UTC
From: John Montalbano <jrmont@iquest.net>
Message-ID: <338E4591.2155@iquest.net>
Source record: 196188

Michael,

Normally, the ability to receive image frequencies is not desireable in a receiver and the designer spends additional effort to make sure they are not heard. However, they can often be heard in inexpensive double conversion receivers, where a local oscillator in the radio is mixed with the incoming signal. Suppose you are tuned to receive 474.400 Mhz. If your radio's IF frequency is 10.7 Mhz (typical), the local oscillator will run at 464.300 Mhz so that when it is mixed with the 474.400 Mhz signal, it produces the difference of the two or (474.400 - 464.300 = 10.7Mhz). However, if there is a signal at 453.000 Mhz that is strong enough to get through the filtering in the RF stage, it will also mix with the local oscillator to produce a signal at 10.7 Mhz (because 464.300 - 453.000 is also 10.7 Mhz). Both signals can then pass through the IF and audio stages of your receiver and can be heard.

Note that the difference between the frequency that you are tuned to and the "image" frequency is twice the IF frequency used in your radio (10.7 Mhz X 2 = 21.4 Mhz). It can be above or below the tuned frequency depending on your radio's design.

Now, there may or may not be a station broadcasting at 474.400 Mhz in your area, so if an image shows up there, you might not mind; Especially when the image frequency is one that your radio cannot be programmed to receive from its keypad.

Some designs will provide better filtering in the RF section to make sure that frequencies that are not currently being tuned are attenuated so that they produce very week IF signals when mixed with the L.O.

So, find out the IF frequency used in your radio. Add or subtract (most likely subtract) twice that frequency from a frequency that you want to hear, tune your radio to the result and see what you can hear.

>This image freq stuff doesn't really make sense.. why would the
> governement go through so much trouble to block cell freqs, but leave

What they did does not make sense, but it has nothing to do with image frequencies :-)

> Also, what if there was really something
> legit in 1006-1030 Mhz, would the cellular freqs prevent me from
> hearing it??

Yes, you would hear both signals. I hear cellular among my 800 Mhz local police frequencies all the time.

Just about 3/4 cm away from the PWR jack is a little hole. With, say, a bent paper clip, you can reset it by pushing the paper clip into that hole. All freqs will be reset to zero, and locked up pro-39s should respond without being locked up.

I haven't had a problem either selling several scanners, but insist on doing a COD through the US Post Office. You can request cash, etc. If their money order is no good (in the case of the original poster of this thread) then they have committed mail fraud and the post office is able to handle it. This also protects the buyer in case the box is full of rocks.

Marv-
Here is a secret to getting exactly the info that you are looking for! Go to http://ourworld.compuserve.com/homepages/bcheek/WSR.htm. You can do a keyword search for what you are looking for. If you want to find the procedures to convert a Pro-2005 to a 2006, then go into the KEYWORD search. Yes, you can download it and put it into a database and do some queries, but most browsers have a little FIND function that works great for this. Type in "2005" into the FIND window...after a few clicks on the items that don't pertain to what you want to see, you come across the following line:

PRO-2005; Convert to a PRO-2006,V1N01P05,V1N04P02,V7N01P04,,

Now, to get the latest article on this procedure...where it is most refined, I would get the lastest WSR on that subject. That would be Volume 7, Number 1, Page 4. Call/E-mail Cindy and make the arrangements to get it. I hope this makes things a little easier to use.

> and it working out just fine. William Lee

I have the CE-232 interface, and a friend has the OPTO unit. The OPTO is great at frequency mgt. and quick scanning, but the software isn't easily (stress..."easily") modified or added to. The CE-232 comes with a script language that can be mastered with little effort. With it, I can make mine wait for a target frequency to become active...then reprogram a bank with specific frequencies...turn on the recorded for specific frequencies within that set of frequencies...continue so until either a preset amount of time lapses, or no transmissions are heard for a preset amount of time...upon which the thing programs itself back the way it was and goes back to normal scanning. All by itself.

The CE-232 will do many more interesting functions. Many are supplied with the software, and many can be written by the individual. Your imagination is the limiting factor.

My friend has expressed the fact that he wished his OPTO unit did some of those things, too.

The OPTO unit is slick, I'm not saying it isn't. It has great features and is easy to install. But to say it "wins hands down" is not exactly correct. It depends on what you want out of your unit. The OPTO is sort of the "turn-key" interface, while the CE-232 is the "get your hands dirty" interface, where you can get inside and tinker and poke around (and blow stuff up if you're not careful) ;-)

Just my humble opinion...

Andy

> Who in US sells Yupis?

No one. They have no FCC certification for any of their radios because they are cellular-capable. No FCC cert means no import for sale in the US. You can only order from outside the US and import it. And from what I've been hearing lately, US Customs is having more luck these days catching these type of "illegal" radios at the border and impounding them thanks to the two morons from Florida.

What happens to the trunk tracker when the motorola system goes into failsoft mode?

I am system engineer for a type I system in Charlotte NC and will try to address the Type I mapping problem when my radio arrives.

Will it be possible to monitor a type I system in bank 1 and a type II system in bank II without changing the map?

The Charlotte Mecklenburg Public Safety Trunk is a Type II Smart-Zone system consisting of around 50 licensed freqs.
I understand that the TT will only allow 30 channels per trunk - Is it possible to scan more than one trunk in trunking mode?
I have vigorusly scanned the 50+ freqs and it appears that not all freqs are active, so I may be OK for a while - guess I could call
the head tech at the local MSS and find out which freqs are being used. Some freqs are in the Public Safety section (866-868) area
and appear to be dedicated to EMS/Fire tg's (talk-groups) although a few PD call have been heard here.

How does this scanner respond to Call Alerts?

Has anyone compliled a list of codes used in the CLT/Meck NC area?

I have heard that the radio will do either trunking or conventional but not both at the same time - Is this true?

Thanks for your help!

A few years ago while on vacation at Myrtle Beach, a friend of mine
keyed his modified Alinco on 154.570 using a PL of 100hz and accessed
Mickey Dee's speaker at the drive thru. One fellow in a souped up
Chevelle placed a rather large order and my friend replied
"Hell No!! go away - You'r too damn fat" The guy proceeded to lay
a line of rubber that extended from the drive thru speaker to about
a hundred feet down hwy 17. We later saw the same guy at Hardee's
a few miles down the road but could not do a repeat because Hardee's
uses UHF.
Most MD's use vhf-hi in and lb out with 2 seperate PL's - one for the
drive-thru speaker and another for employee to employee comms.
My friend said he constantly harasses MD's in his hometown by belching
in the mic causing unsuspecting mgrs to have counseling sessions with
MD's male employees. He has also been known to talk a little trash to a
cute babe at the drive thru but has yet to get any of them to go out with
him -
Plse note that I value my ham ticket too much to place it in jeopordy by
xmiting outside the ham bands - but it is tempting!!

Source record: 196200

The Regency MX5000 does have a speedup scan increase mod but I wouldn't do it. It only speeds up the scan rate by about 1 second and tends to skip over some of the 20 channels. There is one neat thing about that radio that not too many people know about though. It has a Search HOLD feature on it. Here's how you do it. Enter all zero's in the clock set mode. Now instead of hitting the Enter key, just turn the scanner off. Now any frequency that the scanner stops on in either Search or Scan, the scanning won't resume until you push any key on the keyboard. Works great for finding and holding new frequencies while you
are away from the radio. ->Dan

How much should I expect to pay for a new Uniden Bearcat 3000xlt NEW?

How about used?

Does anybody have any recommendations for a good mail order company?

SO GO BUY ONE FROM one of those guys.... but don't forget to use your VCHIP when you place your order.

Billions of dollars of protected financial transactions occur because of telephone credit card transactions and all you need to know about me is that if you don't receive your merchandise by 10am next day, you can call me a crook and get your money back.

Don't call me names until you've tried it.

It's moronic statements like those above that destroy commerce in this country and this forum. When, in fact, supplies of scanners are plentiful the prices may change, but right now I'm the guy with the inventory and the cash tied up. The prices you quote are meaningless if the stock doesn't exist, or is sucked up by pre orders and waiting lists.

There are only a couple of dealers who even have stock and I am obviously not trying to compete with them. I see Jeff at Ham Station has a very short list now, and a very good price. He's a good guy to deal with and as I only have a few left now after my local sales, I am real happy for anyone who can get a scanner from him.

Your comments are simply self serving - somehow you get a woody from bringing down other people with scathing negative comments. Some of us have a living to make and a job to do.

Oh, btw, don't tell me how to run my business - run your own. Any 'customer' I do business will have all the information you suggest and will not complete a transaction they are not comfortable with. They, I am sure, don't need you to mother hen them.

If you don't like my post simply say so "Gee Tim your price is a bit high"

Ok buy a scanner from someone else.

If I offerred you a trunk tracker for $89.95 but only if you send the cash taped inside the pages of a January issue of TIME to my secret mail drop, would that make you happy

>
>all new owners of trunkers . have you figured out how to program and
>operate please discuss

Bernie: of course we have...all fourt thousand of us.

piece of cake. just read and worry.

just look and ponder.
just gasp and wonder
just think and faint
just try and fail

The idea is based on your reading the booklet they provide
and going to http://www.grove.net

printing out the Intro Piece that Bob included and reading that
over and over again...to music : Raskalnakov good choice
Raskalnakoff better choice
you decide

then just do one part at a time. Slowly. Don't fret...it's
no great sweat. don't pine...you'll succeed, in time.

The process sounds like it's written for anyone with a few
years at MIT or Disney School for Comedy Buffoons.

Read that booklet until you understand what the definitions
mean. That is the secret. So when they Start talking about
the importance of ID's...you will know that that is the crust
of the whole enchillada. You put in what you choose.

Bernie...take deep breaths. Relax. Go the the bottom of the
pool and look around at the tyles on the bottom of the pool...
(oops, I thought I was teaching swimming on the net....).

Got carried away. Another group I get off on.

Get a study group together and let the ideas rip.
Start a Club of "We Need Help" and once you admit
it it will cease being a problem.

And most of all...you can always return it for a refund if
you bought it at a reputable GRAY SALE.

Enjoy....

Bill Conduit
etc.

wow...did this come out of your mind or your main influence
in life: your momma. If so, was it a rush, she is so fat
she had to go to Sea World to get baptized while waiting
in her newly erected dress: a tent. And to be asked to
iron her underpants she had to do it in the drive-way.
PLus she had to get a building permit to have you help her
put her girdle on. And then you had to duck because she
puts her belt on using a boomerang. And then after you
removed her clothes in an emergency, she asked you to give
her the bazooka so she could put her tampons in. She's so
fat that she puts her lip-stick on with a paint roller.

And then when you got outside with her she was reminded of
her fatness when putting on her raincoat, people ran after
her yelling, "TAXI"

Putting on her shoes, she is so huge she has to put a sock
on each toe. Then when she cuts loose the Weather Agency
gives her farts their own names. did you say she is stupid?

yes, it takes her two hours to watch 60 minutes. Cooking,
she takes half an hour to make minute rice. She sends faxes
with a stamp on it. Calls pagers collect. And you tried to
stop her from strangling herself withn a cordless phone.

TAlk about genetic engineering.

She sold your car for gas money. And when you let her go to
the bathroom at the dealership, she saw a 'WET FLOOR" sign and
took a piss.

Plus get this: Rice Krispies won't talk to her. and she's so
ugly that she has to TRICK OR TREAT over the phone. Can you
believe it, her mother had to feed her with a slingshot.

I tell you...and you just cannot stand good vibes being shared.

and when she gave birth she was so old you came out with
dentures. the cave drawing of her is still viewable.

so what is your angst?

I'm pretty certain that most of the cities you were asking about (Perry, Euclid, etc.) are on the 800 mghz "trunked" system. I know that the Lake and Geauga county Sheriff's Office are on 800 mghz.

I do know that the Highway Patrol on I-90 and in Lake, Geauga and Ashtabula counties use 44.980 as the dispatch channel and 44.820 for the cars. Euclid P.D. often uses 155.370 (Intercity) when they are using aircraft to clock speeders on I-90. The only other non-trunked frequency that I am sure of is the Ashtabula County Sheriff which has a strong radio system on 155.550.

calling you names: where? when? who?

moronic...a bit out of the blue sky, no. Moronic...laconic,yes,
but moronic. question mark.

>It's moronic statements like those above that destroy commerce in this
>country and this forum.
>
one thing: destroy commerce in this country is a bit egotistic.
Your conribution must be enormously needed to keep the
military happy so they can protect the shores of this land
we call "home"....

as for below...really now, no one in their right mind would
buy at this price. This is going a bit low.
>If I offerred you a trunk tracker for $89.95 but only if you send the
>cash taped inside the pages of a January issue of TIME to my secret

Way to go Wiggie. A great response! I had the OS535/2035/Probe setup and loved it so much that I am now upgrading to a 2042 combo. But I have to congratulate you on your answer. A fellow asked a question and you did not give him a smart ass answer, or call him stupid for asking, or point out any misspelled words or ask him what he was smoking. You took the time to give him an honest straight forward informative answer. It made me see how great this newsgroup could be if everyone did the same instead of what goes on most of the time. I hope more will follow the example you set.

I think the guys question was How Do You Transmit On Cordless Phone
Freqs.

Well, I too would like too know, modifications, tricks to get thg ephone
to transmit & reciev on any channel I choose.
So far the one easy way I know of is to get 6Meter radiothat can go down
that low.

Something about Missouri, eh? I hear them in Phoenix, AZ almost every
day during the summer on 42.06, 42.38, and 42.12. Try searching 33-34
MHz, 42.02-42.94 MHz, and 44.70-45.20, as well as 46.06-46.50 MHz.

I wonder what it is about Missouri that makes them such a common E-skip
catch...

I thought the BC3000 was a console type radio.
Battery?
Leather case?

BTW you can buy 12 volt cords from Autozone and other
stores like Pep Boys for around $7. These come with an
led indicating good power etc. Not bad for the money.
I use these for the AR8000 and ham ht's.
The only reason I would buy an OEM cord is if there was
some kind of buffer needed for poor spike protection in
the device you were using.
Is that the case with the BC3000?

>
Mike I would have to disagree with you at this time.
This could change if the trunktracker can be hacked.

The AR8000 wide range receiver allows you to do things
that simply can't be done with these other products like
trunktracker. Else why does the FCC and US Customs go to
great lengths now to make sure no US citizen outside of
law enforcment or US military can have obtain an AR8000
in the USA. Addons and mods abound for this radio that
change an ar800's functionality. No one in government
cares who has a trunktracker.

Yesterday while I was in Athens I reprogramed a AR8000 in
about ten minutes simply by connecting mine to the other
AR8000. That fellow was delighted with the results.

The AR8000 has its place in the scheme of things. It
isn't the radio for everybody, I know that. Hell some
can't even understand the standard ar8000's 100 page user
manual or the companion CU-232 interface manual. Even I
tend to forget some of the things that are possible with
this radio. It took me several minutes to remember how to
reprogram another ar8000. I forgot to bring the manual.

But given a choice for a user who has no radio with TRS
monitoring capabilites, I would suggest they look at the
trunktracker first. It is a lot cheaper (a mute point
since ar8000's can not be sold) and offers most of what
many will ever need or want. The BC235XLT appears to be
definitely more user friendly in its simple design.

IMHO a person would be foolish to buy a sport cat or
similar mass market radio now when they can get more bang
for the buck in a relatively cheap trunktracker. These
former radios are what I would clearly consider outdated
scanners.

Both receivers are impressive and the units I tested
worked well. See my reviews in Monitoring Times for
a detailed comparison. Meanwhile, here is a summary.

The AOR AR5000 has more features and wider frequency
coverage. My loaner AR5000 had more uniform sensitivity above
1 GHz, but several birdies in the 400 MHz range.

I found the ICOM IC-R8500 better constructed and much easier to
use, though AOR fans may be more comfortable with its multi
key sequences.

Below 30 MHz, the R8500 has the advantage over the AR5000 due
to its IF shift and audio peak filter.

I bought an IC-R8500 and continue to enjoy using it.

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage
super receiver. Good sensitivity throughout. AM, SSB, CW,
FM detectors. Frequency readout to 1 Hz. More features
than any other radio. DTMF reader and RS-232 interface
included. Multiple settings for IF and AF selectivity,
attenuator, AGC, deemphasis, etc. DB9 RS232C connector.
Negatives include low contrast LCD display and difficult
user interface. NFM squelch closes slowly, causing noise
burst at end of each NFM transmission. Electromechanical
relays click at various frequency boundaries, including 400
MHz, producing a clickety-clack noise -- annoying while
scanning banks of mixed band frequencies. Great radio,
otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob
Parnass, in Monitoring Times, December 1996.

[...]

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks
of 40 channels although bank sizes can be changed. 100 Auto

store and 100 Skip memories but that can be increased by
reallocating channels from the conventional scan banks.
Fixed and programmable step sizes. Relays clickey-clack
while scanning across band boundaries. Triple conversion,
First IF is 48.8, 778.7, or 266.7 MHz, depending on band.
Second and third IFs are 10.7 and 0.455 MHz. Weak to
moderate cellular images starting near 1106 MHz. Rugged
construction. External power supply. DB25 RS232C
connector. Audio peak filter. Ok scanning and great
searching performance. See "ICOM R8500 Receiver," by Bob
Parnass, in Monitoring Times, January 1997.

I'd be glad they (the Floridians) caught if they had been charged with an ECPA violation. Id sure get a kick out watching the Gov trying to prosecute anyone under that special interest piece of legislative gobbeldy gook. Or for that matter, watching the Republicans trying to find a federal agency even WILLING to prosecute under ECPA. What a joke.

I'm glad when any criminal gets caught. I'm sad when I see this much negative attention drawn to our great hobby. I'm sad when I see the way the media treats hobbyists. I'm sad when newspapers wont print pro-scanning letters to the editor because cell phone dealers are their biggest advertisers. Lets take away the medias scanners and see how they cover the news. Gee, they might have to go out and roam the streets talking to people, actually working for a living. Sounds downright unconstitutional.

Happy Scanning

Yes, and 400 minus 275 equals 125 smackers. And the 43 can use disposable batteries. And generally gets fewer intermod problems. And is smaller and lighter. But I grant the 3000 has better audio and more features and a warranty. Im still a big fan of the PRO-43. He doesnt say if its an older production model which can still be modified / has been modified, and the price seems high, but if somebody wants one that bad, I say have at it. The PRO-43 - A Classic.

<willee@inwave.com> writes:

>I recently posted some advice about installing a CB setup with a 20 - 50
>watt RF amp.
>I was really suprised at the number of posts that advised that was
illegal.
>SO ...
>What is the point?

The point is that scanner hobbyists have a bad enough image as it is
without your post helping someone else commit an illegal act adding to the
problem. I'm not sure that the individuals who post these kind of messages
(myself included) have such a big problem with the illegal act as it is a
case of public relations. Many telecom companies read this newsgroup for
ammo in their fight against the publics right to monitor the radio
spectrum. Still, though, outside of the ECPA and cellular law issues,
there at least used to be good sane reasons behind the laws and
regulations that cover radio comm. (IE Inteference concerns, efficient
spectrum useage, public welfare, etc).

Isn't listening to telephone calls on a scanner
>illegal?

Depends on the radio service involved. Not illegal to listen to an Amateur
Radio phone patch. But generally speaking, it is Illegal in the United
States.

Who protests when someone offers their cell ready scanner for sell
>on the news group?

Folks who post outrageous prices for used gear draw flames. Folks who post
CB related stuff on scanner newsgroups draw flames. A private individual
can still sell his or her possessions in this free country, selling a used
radio manufactured prior to the ban is not illegal. I have yet to see a
commercial dealer in the United States offer new, cellular capable
scanners for sale to USA customers on any newsgroup. Overseas dealers post
according to their own laws. The United States does not control the
Internet or the world, yet...

>I think that there is a large group that hangs out here and lives for the
>opertunity to correct or straighten someone else out. They catch the
>slightest of errors or illegalities and promptly use bandwidth to point
it
>out to the rest of us.

Some folks need correction more than others. They post mis-information for all the world to read and then act outraged that someone took the time to correct them. They send hate E-Mail and make baboons of themselves in replies. Newcomers to the hobby get turned off to the newsgroup, they get the wrong information, and then the real mentors of this hobby have to take the time to answer their questions. Get all the SPAM crap off the internet and then we'll talk about wasted bandwidth. Are you being charged by the bytes received?

>Of course running more than 5 watts (input to the final amp. not to the
>antenna) is illegal on the Chicken Band. But who does it stop from doing
>it? Has anyone running less than 100 watts ever been arrested for using
>excessive power?
>
>William Lee

The more power everyone runs on CB the fewer folks are able to talk. High power clogs up the channels and messes up folks radio and tv reception, further ruining the radio hobbyist's image. Many folks have been fined for too much power under 100 watts. How long have you been a CB'er? In the seventies I used to work skip into and out of Alabama and Texas on 5 watts (Also illegal, working Skip, I admit...). Formerly SANDHAWK Chicago KEK1132. (yes, I actually had a CB license!).

I thought the final out limit was 4 watts, and there was another ERP limit off the antenna. Laws deter and define and help resolve offenses. Only humans can restrain themselves.

An aside... I had a Hustler 5/8 Wave Base Super Trumpet antenna for CB. It was the best antenna I've ever had from 5 to 50 Mhz. I understand that today you cant run more than a 1/2 wave on a CB base and still be legal in the US, is it so? Who makes a good/great CB vertical base these days?

> If you are a users of this combination please respond..
> I'm interested in feed back on this combination

It all depends on if you have the USA or Export version. The USA version must be unlocked via software, some programs will, some won't. The last I heard, the FCC was threatening software developers with legal action if cellular unlocking was not removed. Therefore, the LATEST versions of many control programs WILL NOT unlock the USA Opto boards.

IMHO, this combo is awfully expensive to listen to cell phones. (Radio + board + software = AT LEAST $500)

It is a VERY powerful package, there's so much you can do with it that's a hack of a lot more interesting.

I use the following combo:

OS535 + 2035 (Pipeline mode)
OS456 + 2006 (CIV daisy chained)
Scanstar Plus w/ Digital Recorder (Controls up to 10 radios!)
Win '95
Dell 200Mhz MMX + Zip drive (I record to zip disks)

That's exactly what I mean. If you put too much heat on a pad where you are soldering and give it any physical motion at all, it pulls right off the board. (usually taking the trace with it) = lifted pad/lifted trace Both are not good things to have happen with any PC board.

>No. Just that the CPU's don't contain the code to control the PLL to

Hmmmm.... this sounds like it is getting easier. The uP is only lacking the codes to control the PLL through the cell bands huh? Is that the case for the rest of the lost Mhz? (like the commercial TV broadcast space)

Greetings All,

Would you know anyone wanting a metal detector?

I'd like to trade my White's 6000i/DP for a scanner (non-crystal). I'll throw in a hard case, headphones, and some treasure magazines. Everything is in fine shape.

This also has an 'VU meter' style display. The handle is The only differences from the newest models are the handle and that it has one less
adjustment knob.

Otherwise identical to the current $700 models.

I bought it used last year for $200.00 from an electronics dealer and I have the receipt.
I live in the Cincinnati area.

Please e-mail me directly with any offers.

Gawd, are we becoming LAZY or what???

Never before have we been offered such features as the ADI AT-600 at its price...and we are whimpering and whining that we cannot program it via our computers yet.

Do you think the software will be voice-controlled??? We will STILL have to TYPE in the information in the program...so we'll probably have about the same number of keystrokes to enter on our computer keyboards anyway....

The PRO-2021 doesn't have an 800-MHz RF front end.

Just got my BC3000 and it is great, however, it seems to have a problem with priority scanning. Whenever several banks are scanning, 6+, and I press PRIORITY, it seems to get hung up when it searches the for priority channels and does not return to normal scanning even if there is nothing to be found on the priority channels. Anyone else having this problem?

From: Dave <Please@Don't>
Message-ID: <01bc6bce$0b2d89a0$e54692cf@default>
Source record: 196424

Newsgroups: rec.ham-radio,rec.radio.shortwave
Subject: PRO-2021 Mod Info...
Summary: 68-88Mhz and 810-960Mhz additions to a venerable scanner
Reply-To: tw@dropte.UUCP (Thomas Walsh, KB7EFZ)

overview: the pro2021 is a 200 channel scanner, mode is implied by
frequency, missing the 220 ham band, 800+ cell fone/ISM band, the
170ish thru 380ish military? air band...
sold for about $200 from radio shack, first on special in 1986 time
frame.
bands which the cpu will honor may be excluded by the presence of
diodes near C151 (on silkscreen) top view, left end, rear.
in order from left starting with D44:
D44 - 'U2' - 810-960 MHz Mode: FM Step: 12.5 kHz (installed - cell
fone)
D?? - 'U1' - 380-512 MHz Mode: FM Step: 12.5 kHz
D?? - 'Hi' - 138-174 MHz Mode: FM Step: 5.0 kHz
D?? - 'Ar' - 108-136 MHz Mode: AM Step: 25.0 kHz
D45 - 'Mi' - 68- 88 MHz Mode: FM Step: 5.0 kHz (installed - TV ch2-4)
D?? - 'Lo' - 30- 54 MHz Mode: FM Step: 5.0 kHz
further: when the cpu selects a frequency, IC8 (a shift register) is
used to enable the rf front end for that band. IC8 is near center,
about 1.5 inches from front, thru-hole mounted on top. the outputs
of ic8 associated with D44 and D45 are not connected to anything.
R112 leads from pin 4 of ic8 to base of q10, and when the output
at pin 4 is active (low) enables VHF LO band reception.
Pin 5 of ic8 is active for "Mi" or "VHF-Mid" band recption.
another (10K) resistor may be connected from pin 5 to the rf-enable
end of r112. this will enable the lo/rf for 68-88.
this mod is incomplete, and any "scanner men" are invited to
enter this discussion.

pin 13 is associated with the 810-960 MHz band, and similar
modification
of adding a 10K resistor from pin 13 to the rf end of r113 should
enable that rf front end.

note: search mode does not function with either of these mods, so
i'm probably missing something, but direct (manual) frequency entry
of the 2nd harmonic of the 440 MHz ham band coupled with the use of
a 440 HT who's 2nd harmonic is about 50 - 100 dB below carrier result
in a full quieting signal at 5 watts at a distance of about 2 feet.

so: have we stimulated anyone who knows stuff about modifying scanners
to join in and help us 2021 owners out? if so, that would be great.

btw: cycle the power after clipping diodes, the cpu seems to sample the
diode array at power up only. reset is not necessary.

PRO2021

MODS For Pro 2021

Here are the mobs's for the Pro 2021.
First let me add that when the PRO 2021 was built, they made at
least two different CPU boards. One of them Will WORK with the
mod and the other will NOT work with the mod. I don't know how to
distinguish the difference between them.

Step 1 Disconnect power
Step 2 remove the top cover by removing the five (5) screws
from the sides and back of the scanner.
Step 3 Carefully lift up the top and disconnect the speaker
wire connector form the main board.
Step 4 With the face of the scanner facing you, look to the

left of the circuit board and locate the D-44 and D-45
diodes. Clip one (1) leg of the D-44 diode. This MIGHT
give you 800 MHz.. To possibly get 68 to 88 MHz clip
one (1) leg of the D-45 diode.
Step 5 Reconnect the speaker connector
Step 6 Reinstall the cover.
Step 7 Program the Search limits 851.000 to 866.000 and
search. Then program the 68.000 to 88.000 limits. If
you hear radio traffic, IT WORKED. If you Don't hear
radio traffic, oh well you can do one of two things.

1. Open the cover back up and cry into the scanner, and
maybe the tears will create a new circuit, and maybe the
scanner will work on 800 MHz.

2. You can do what I did, and go to Radio Shack and buy a
Pro 2006 scanner.

Note: After you clip the diodes, the display will show the
freqs that you punched in, but if the mod did not work,
there is no need to reconnect the diodes.
I have tried this mod on two scanners and it did not work no
either one. I understand that other people have has success
with the mod though. Well if it don't work don't blame me.
73's.

-

This is a speed-up mod for the slow 2021 that does work. It will increase
the scan speed to about 11 channels per second. It has no effects on the

delay time.

Unplug the radio, remove the 9volt batt.

Remove the upper case, by removing the four screws on both sides of the outer case, as well as the one screw on the rear apron of the radio which fastens the upper case to this surface.

Lift the top case section and unplug the white plastic two conductor speaker plug, allowing removal of the upper case entirely.

With the scanner sitting upright and facing you, locate resistor R-147 (a 39k-ohm resistor to the left-front of the main board-almost behind the vicinity of the LCD display). Snip the leads at the resistor body with a pair of wirecutters to leave as much of the existing leads as possible.

Solder a 15K-ohm resistor to those remaining leads.

I found this mod in Monitoring times and have done it to several Pro 2021 scanners and have seen no negative drawbacks to it.

I want to add one more note to this mod, Overall what you are doing is adding 15k-ohm resistance to R-147. For a total resistance of 54k-ohms. YOU ARE NOT REPLACING THE 39k WITH 15K.

Well Greg, I drive from state to state a lot and very seldom hear anyone on the 146.520 calling freq. I monitor it all the time and call out about every 50 miles or so but seldom make a contact. Sometimes its a long way between repeaters. On the other hand the CB channel 19 is always active with weather, road, and bear conditions. Also those truckers can tell some very good stories. True, there is a lot of trash in there, but sometimes you can find a real jewel amid it all. Radio is Radio regardless of frequency.

No contest GW, the Optoelectronics OS-456 wins hands down. It is a bit
pricey but it works very well. As for software I am using the Probe program
and it working out just fine. William Lee

>it's a worthwhile investment, etc. Please email me any reply, thanks
>in advance.

Once you put in their trunking frequencies, the radio will go ahead
and set itself up. All you have to do is get the trunk group codes
and you will be ready to roll! I have been enjoying listening to all
the various Narcotic and surviellence channels since I got mine last
week!

ONE EXCELLENT RADIO!!! Worth WHATEVER price you pay for it. I can
say 1 thing. This radio would have been priced at $1,000 if ICOM or
AOR had built it!

No, they should not be loose. It takes some careful doing, but you can
open the radio up, remove the antenna nut from inside, apply Loctite,
tighten down the nut, and you are all set. It's not easy - you will need
needlenose pliers to get at that nut on the inside of the case.

DON'T GO TO RADIO SHACK FOR A SCANNER!!!!!!!!!!!!!!!!!!!!!!!!!1

Don't make the same mistake I made! If you pick up one of those you will NOT be able to pick up cellular!! If you live in Canada look around for an electronic shop that specializes in radios and find a GOOD scanner that covers cellular and has a tone board so you can listen to the O.P.P., for instance.

If you live in the USA look around for old scanners manufactured BEFORE April 1994 because these can be modified to cover cellular. Another thing you could do is order a scanner (a good one) from Europe or Japan/Asia. There are plenty of web sites that you could browse for that.

>

>Is it true if a Rat Shack amplified external speaker is mounted behindthe grill
>of an automobile you can have fun at McDonalds? I have heard
>that some people go to the drive through and blast other peoples orders
>all over the parking lot using this technique. This allegedly infuriates
>the manager and the person ordering the food!

Yes this would probably work. But ... I have a Federal siren in my car and the
radio input is connected to my scanner. It puts out 100W of audio and this will
generate pretty good feedback while driving down the road in front of a MD's
while their speaker is in the rear of the building!

Funny as hell (damn loud too).

>than optimal sound quality.

Look for a portable scanner on the market for around 150 bucks.

DAMARK...they have an 800 number always has scanners for sale
at great prices.

Grove has used models for sale in their www site.

All you really need is a scanner with 50 channels.

like the bearcat 70...it's got 16.

and you can buy them for 75 to 100 bucks...I have one and never use it.
it has nicad batteries and a charger.

they have a case and rubber duckie affixed BNC=wise

This is what you need: the 70xlt or equivalent.

Small and compact and slim and light weight

2843. Scanner-Computer Interface

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <338f4803.50294730@news-server>
Source record: 195996
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.amateur

.....Information about.....
The CE-232 SCANNER/COMPUTER INTERFACE

COMMtronics Engineering
PO Box 262478
San Diego, CA 92196
Voice/Admin: 619-578-9247 (1:30pm-5:30pm, PDT)
Fax: (619) 578-9247 anytime
E-mail: bcheek@cts.com

OVERVIEW
========

The CE-232 Scanner/Computer Interface is a 2.5" x 3" electronic board that goes between an IBM-PC/XT/AT/compatible computer and a scanner, for some very powerful capabilities.

The CE-232 is a -smart- RS-232 Interface controller and data acquisition system for some scanners and at least a drudgery-free automatic programmer and remote controller for all supported scanners.

The CE-232 eliminates the drudgery and disappointment in scanning by its ability to "AutoProgram" up to 999 memory channels from a plain ASCII text file in a short time, error-free and exactly the way you want it.

The CE-232 also allows control of the scanner from the computer's keyboard; a strong plus for handheld scanners and those with hard-to-operate keyboards like the PRO-2035/2042 !

The CE-232 is a one-way controller and AutoProgrammer like described above for many scanners, including the PRO-2042, PRO-2035, PRO-2022, PRO-43, PRO-39, PRO-37, PRO-34, PRO-26, etc.

The CE-232 is a TWO-WAY controller and data acquisition system for the time-honored PRO-2004, PRO-2005, and PRO-2006 scanners which have unique circuitry that allows the CE-232 to do a LOT more than just AutoProgram and Remote Control, including log data on "hits", reject undesirable signals, look up data about a certain frequency, and much more described below.

Inquire for details about these or the many other scanners with which the CE-232 Interface is powerfully capable.

==========
DESCRIPTION OF CE-232 PERFORMANCE & SPECS

==========

+ Does not alter the scanner's specs and performance

+ The scanner is always operable, with or without the
CE-232 and/or a computer.

+ Low power consumption, typically 15-mA @ 12v

+ Rugged, fairly forgiving of abuse; easy to troubleshoot/repair

+ One CE-232 can serve any number of (supported) scanners,
one at a time, of course. For instance, you can disconnect it
from a PRO-2006 and reconnect it to a PRO-43 in a flash.

=======
DETAILS
=======

** Operate the scanner from the Computer's Keyboard! **

REMOTE CONTROL FROM COMPUTER'S KEYBOARD:

Virtually all functions of the scanner can be operated from the
computer's keyboard. For example, a reasonable facsimile of the
scanner's front panel is displayed on the monitor along with a keypad
emulator to show the keys to be pressed as if you were operating the
scanner in a normal manner. The CE-232 does not slow down the scanner
nor alter its peformance in any manner! Not only can you operate the
scanner from the computer's keyboard, you can also operate normally
from the scanner as well.....both at the same time, if you wish.

NOTE FOR PRO-2004/5/6 ONLY: As the scanner operates, the computer
monitor displays EVERYTHING that the scanner shows in its LCD display!

==========

** The scanner is AutoProgrammable by the CE-232! **

AUTOPROGRAMMER

The CE-232 can auto-download into the scanner's memory up to 999
channels at a time, from a previously prepared plain text list of
frequencies! Auto-Programming includes channel, frequency, DELAY,
MODE, and LOCKOUT functions as desired.

This AutoProgram feature applies to all supported scanners, limited
only by the number of memory channels in the scanner, up to a maximum
of 999.

You can also manually program the scanner from the computer's
keyboard, in conjunction with normal remote keyboard control as
described above.

NOTE: The AutoProgrammer function of the CE-232 uses a very simple
ASCII text format, well within the capability of any text

editor and/or database manager to construct and lay out.

Example: ,047,0026.915,am,D,L,

would program 26.915 MHz into Ch-47 with AM mode, Delay and Lock/Out set.

(Leading zeros are optional - not required)

** The CE-232 has excellent 3rd party support **

The PerCon Corp (regional+) FCC-Databases-On-CDROM have a
special export feature for the exact type of file format
(*.APF) for quick and automatic generation of AutoProgrammer
files for the CE-232 Interface! Within minutes, you can have
thousands of frequencies for your area ready to be AutoProgrammed
into your scanner! For more information about PerCon Corp and
their FCC Database products write, call, e-mail, or fax:

PerCon Corp; 4906 Maple Springs/Ellery Road; Bemus Point, NY 14712
Fax: (716) 386-6013 Voice: (716) 386-6015
E-mail: admin@perconcorp.com Web: http://www.perconcorp.com

=-

Computer-Aided-Technologies (CAT) new MAGIC program offers
direct support for the CE-232 by its ability to extract and
prepare AutoProgrammer Files (*.APF) from plain, unorganized,
raw frequency lists. Write, call, e-mail, or fax:

Computer-Aided-Technologies; PO Box 18285; Shreveport, LA 71138
Fax: (318) 686-0449 Voice: (318) 687-4444
E-mail: scancat@scancat.com Web: http://www.scancat.com

==========

** CE-232 has 4 Electronic Switches for User Control
of modifications & other scanner functions **

USER DEFINABLE CONTROLS

The CE-232 offers four user-definable switches that can be used to
control add-ons or other modifications that you may have done to your
scanner! Uses for these User Switches are virtually unlimited, but
might include turning on/off things like Automatic Tape Recorder
Switches; extra memory banks; Data/Tone Squelch and any other of my
mods or add-ons that you've developed or acquired. These UserSwitches

are controlled by YOU and, if desired, automatically by the computer
using the Script function! (The Script Function is described below.)

(User Switches available for all supported scanners)

==========
THE FOLLOWING FEATURES ARE AVAILABLE ONLY FOR PRO-2004/5/6 SCANNERS
==========

** Easy-to-use AutoLogger feature **

AUTOLOGGER

The CE-232 will AutoLog for unlimited periods of time, any and all activity encountered by the scanner, regardless of the mode. Each -event- (squelch break) is logged to a text file as a data line item containing the following information at a minimum:

CHANNEL: number
FREQUENCY: MHz
MODE: AM, NFM, or WFM
DELAY: status, set or not
LOCKOUT: status, set or not
FUNCTION: Prgm, Man, Scan, Search Up, Search Down, etc
STEP: Search increment, kHz, if applicable
DATE: of event
START TIME: of event
DURATION: of event (seconds)
(and more): several user-definable parameters including S-metering!

Autologging can be turned on or off at will. Autologged files are automatically opened and named with a date/time logo, similar to: 96070812.LOG meaning: 1996, July 8, 12th hour (noon).LOG. Each hour, a new log file is opened and the old one closed & saved.

Autolog files can be AutoProgrammed back into the scanner's memory at will with no manipulation or changes; just the press of a couple of keys! This means that you can do a SEARCH function all night or day while you're away and then at your leisure, program in each new found frequency quite simply, hands-off, in a matter of minutes!

PRO-2004/5/6 feature only

==========

** CE-232 rejects "birdies" and other undesired signals! **

AUTO-REJECT

You can do like I did.....disconnect the antenna; set the ATT switch to the -10 dB position and do a SEARCH from 25 MHz - 1300 MHz with the autolog feature ON. About two hours later, you'll have a file that contains just the BIRDIES in your scanner! Now you rename this file to something like BIRDIE.REJ, and the next time you do a frequency search, you can specify another CE-232 function called AUTO-REJECT, that prevents the scanner from locking or stopping on a "birdie".

But that's not all! You can insert other undesirable frequencies into the BIRDIE.REJ or another *.REJ file, so not only can you EASILY make the scanner forever reject birdies, but also pagers, data channels and other obnoxious signals that you don't want to monitor!!!

PRO-2004/5/6 feature Only

==========

** CE-232 offers a LOOKUP feature for I.D. of signals! **

AUTO-LOOKUP

The CE-232 sports a LOOKUP function which displays your data for a frequency every time the scanner STOPS on an active signal! Your previously prepared AutoProgrammer File will do nicely for this function, and thereforewill display whatever is in your database for that frequency! Great for quick identifications of the signals received by your scanner!

PRO-2004/5/6 feature only.

==========

** CE-232 offers a Script Language to automate scanning! **

AUTOMATED SCRIPTS

And, now comes perhaps the most important feature of all: a very powerful -script language- which lets you automate a series of functions to make the scanner do various things while you're away or not interested in being right there for the operation! In simplest form, you can make a Search & Store function to log everything it hits the first time, but to reject duplicates if hit again! You can make things happen at certain times and stop at other times; and otherwise the Script Language allows you to write your own convoluted functions and procedures! Essentially, this scripting feature is much like a macro function; you write your own ticket! And it's not difficult, either. In fact, many scripts are provided with the program!

PRO-2004/5/6 supported feature (but may work with other scanners)

==========

** The CE-232 has flexible inputs/outputs for the User **

USER-DEFINABLE INPUT/OUTPUT BITS

The CE-232 offers 22-bits of unallocated, user accessible I/O registry. There are 8-bits of Output logic that can be controlled from the CE-232 Script feature simply by setting -low- and -high- in these bits. The implications are enormous considering that a variety of logical operators can be configured to turn various bits on and off, depending on a variety of user defined input data. The status of these user-defined and script controllable OUTBYTES is displayable and recordable by the AutoLogger.

The CE-232 offers 14-bits of Input Logic that can be tested from the Script function. High and low logic (+5v and 0v) can be applied to these input bits from external sources, much like sensors for idiot lights in a car. One application we have developed is for an S-METER! The AutoLogger can read and store these Input bits, so every -hit- can be associated with a signal strength!

==========

OTHER INFORMATION
==========

The heart of the CE-232 is a non-proprietary computer on a chip made by Motorola (68HC11 family). But the neat thing is that this microcomputer does not contain any firmware or hard programming like others do! Instead, the proprietary software is on the supplied disk and is loaded into the microcomputer chip each time you boot the CE-232 program!

==========

HOW THE CE-232 IS AVAILABLE
==========

The CE-232 is available in four different ways and forms:

1. As a Kit of essential parts, including a professional printed circuit board; six DIP integrated ciruits; one non-proprietary microprocessor chip & chip carrier socket; and a small handful of parts (resistors, capacitors, diodes, crystal, voltage regulator, etc.) Included is our proprietary program disk, you specify size.

Not supplied are standard DIP IC sockets (highly recommended); solder; wiring; serial cable; input & output connectors nor a project box in which to install the CE-232. The board can be installed inside some scanners, if desired, but an external box is much better for most situations.

Included are a very detailed Manual, and Program disk with control program and many supporting files.

2. As an assembled and tested board, ready for you to install in a project box or in the scanner. Comes with the same Manual and Program disk as above.

3. Complete turn-key installation and setup - we do it all, per your specs or ours. Disk and Manual included, of course.

4. As a totally do-it-yourself project, featured in Bill Cheek's ULTIMATE SCANNER book with complete instructions and resource guide!

See above item numbers in below Price List.

==========

PRICE & AVAILABILITY
==========

ALL PAYMENTS IN US FUNDS ONLY.

We accept MasterCard and Visa as well as money orders, checks and cash. Cash is risky and checks can hold up shipment until bank clearance. Barter/swaps possible. Whatcha got?

MASTERCARD - VISA - MONEY ORDER - CHECK - CASH - TRADE?

PRICE LIST effective 7/8/96 - subject to change without notice.
1 CE-232 Kit of Essential Parts, Disk & Instructions: $149.95
2 CE-232 Kit, Assembled/Tested Board, no cables: $199.95
3 Assembled CE-232 Installed/tested INSIDE scanner: $299.95
3 Assembled/tested CE-232 Installed in EXTERNAL box: $299.95
ready for your DB-25 cable to connect between scanner
and project box. See next.
3 1st Scanner wired/tested to accept the External Box: $ 99.95
3 2nd & addt'l scanners wired/tested for Ext. Box: ea $ 84.95
- Instruction Manual Only; discountable against order: $25.00ppd
- Shipping & Handling: Kits, boards, boxes, ea: $ 5.00
- Shipping & Handling: Scanners, ea: $ 15.00
- 3rd Party Software Developer's Information Kit $ 29.95
(free with order or as a file from our FTP site)
4 Bill Cheek's ULTIMATE SCANNER book (Cheek3) $ 29.95
plus $5 S&H, domestic; extra for Canada & foreign
- Calif addressees add 7.75% Sales Tax: $ _____
NOTE: Floppy disks are HD 3.5" unless spec'd differently
Computer, scanner & standard cables NOT included.

Availability is usually from stock on Kits of Parts (Item 1). Assembled and tested boards (Item 2) are also usually available from stock, but inquire first. Custom assemblies and installations by prior arrangements and can be quoted at the time of inquiry.

==========

TECHNICAL SUPPORT
==========

Doubtful of your abilities, are you? Relax. If you know the difference between a soldering pencil and a welding torch, you can probably do the job. The 100-page Manual takes you step by step to success, and it has been done hundreds of times before you came along.

Yes, people have had problems, most very minor..... But, if you have ANY problem, we will provide written Technical Support until you reach success. It's old-hat to us....we've worked with green weenies and salty experts. We have been able to guide to success EVERY purchaser of the CE-232, who has come to and stuck with us for Tech Support.

The primary tech support media is Internet e-mail. We have a full-time, 24-hr/7-day connection to the Net with e-mail checked and downloaded once a minute. Support for the CE-232 gets top priority, often a response within minutes. Support is also available by FAX, and if necessary, snail mail. Tech Support is definitely not available by voice telephone.

One, it's too costly to be distracted by the phone, so I don't use it under ANY circumstances, but two: technical support for electronic technology is NOT very effective by voice. The written medium is BEST and we assure you of timely support when you need it....almost always within 24-hours or sooner, of your request, if by electronic means.

Sorry....mail takes whatever time it takes, but FAX, and e-mail get our immediate attention. The bottom line is we won't let you and your scanner flounder because of a few little problems.... though if you follow the instructions, you are not likely to run into any problems that you can't handle on your own. Tech Support is one of our strongest commitments.

==========

CAVEATS & REQUIREMENTS
==========

The CE-232 works with a PC/clone computer with MS-DOS 3.1 or higher. A minimum of 512-k memory is required along with about 3-Mb of free hard disk space. (Operation from floppy disk is possible.)

Operation under Windows 3.1, Windows For WorkGroups 3.11 and Win95 has also been tested and proved.

MACINTOSH NOTE: We do not support the CE-232 with Macintosh computers, but we can refer you to those who might. Inquire.

The CE-232 connects to the computer's A or B serial ports (COM1 or COM2 only) by means of a standard straight-through serial cable of any reasonable length, say 25-ft or less. The computer's COM port must be capable (and most are) of 9600 baud, 8-data bits, no parity and 1 stop bit: (9600,8N1). For external installation, the CE-232 connects to the scanner via a standard 25-cond parallel cable with DB-25 plugs on each end.

The CE-232 has been tested on XT/AT clones, 386SX/16, cx386SX/33, i386DX/33, i486DX/50, i486DX4/100, AMD486DX4/100, AMD 5K86/P90, and Pentium computers with equal success and good results. Hundreds of CE-232's are in operation around the world on a wide variety of computers and operating environments, by professionals and hobbyists.

The CE-232 was designed *for* the PRO-2004/5/6 series of scanners, but

it works in 1-way control mode with many other scanners. Inquire or see above for the latest.....

The CE-232 works with all known scanner modifications EXCEPT crystal speedups where the Clock Resonator was replaced with a quartz crystal to speed up Scan & Search. Unfortunately, the original Resonator must be reinstalled in order to be compatible with the CE-232. (We can supply them if you lost or broke yours.)

==========

ASSEMBLY & INSTALLATION DISCUSSION
==========

Assembly of the printed circuit board is straightforward and not at all complicated. It takes me about an hour complete a board with no instructions! My 15-yr old (at the time) daughter assembled a board in under 2-hours using ONLY the written instructions I had provided her. Her Board worked the first time out.

Three wires are required between the PC and the CE-232, and about 10 to 20 wires from the CE-232 to the scanner are required, depending on the scanner. These connections are not difficult in most scanners.

For the PRO-2005/6, removal of the Logic/CPU Board from the front panel is required for five of the connections; no big deal, maybe intimidating to the uninitiated, but the instructions are clear.

The most difficult part of the assembly & installation process is fitting the CE-232 board into a project box; mostly a simple mechanical matter. Most of YOU will be more inclined in this area than I am.

If the CE-232 is installed in a project box, then a method must be devised to connect the CE-232 to the scanner. I use DB-25 connectors mounted on the rear of the scanner and then wired within to the required points in the scanner. A standard parallel cable connects between the DB-25 connector on the scanner to a mating DB-25 connector on the rear of the external metal box. Piece of cake that way.

Operation of the CE-232 is a snap! The program is easy to use with pull-down menus and a detailed set of documentation. Much in the way of convenience is built into the CE-232 software.

==========

WARRANTY & GUARANTEE
==========

The CE-232 is a KIT, even in assembled/tested form. Unless we install

it, we cannot guarantee it like ready-to-run factory merchandise. But

we do offer 5-day/100% and 30-day/80% money-back policies (less shipping & handling) provided the sealed, translucent -bag of parts- has not been opened or tampered and the Kit materials are returned in like-new condition within those periods. This gives opportunity to review the Manual and the Program Disk and to make up your mind about committing to the Project. If you commit to it, then we commit to your

success via our Technical Support Program described above.

==========

DO YOU HAVE QUESTIONS?
==========

I am open to your questions of what the CE-232 will and will not do as well as anything else that might be related to your uncertainty as to whether or not the CE-232 is right for you. You can communicate directly with me via e-mail, and sometimes here in the newsgroups, time permitting.

> rest of the lost Mhz? (like the commercial TV broadcast space)

Don't count on it being that easy, though it could be. The thing is,
the mfgr designs and builds the PLL and L.O. to meet the specs and
needs of their coverage. In most cases, I think the PLL would cover
gaps in single band coverage. But you'd need another PLL segment for
the UHF TV band, fer instance. Likewise for the mil-aero band. So the
answers aren't all that pat.....

Half the codes....are you sure:

you want the transmit codes....the 868's
not the 821's and like

the right hand side of the list

821.05 866.00
821.92 867.00
example only...

Make sure you only put into TT the 860' side.....

not the 820's.... of no use here

so that should bring your count down to 18 to go into
the TT 1.

then scan them...

From: "James F. Boehner, MD" <jboehner@csra.net>
Message-ID: <338F5A8E.3A42@csra.net>
Source record: 196002
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Well, hats off to Motorola!

I just purchased a MOT 2900 cell phone, and was just going through the manual.

The following paragraph was found on page 82 of the users manual under RULES, REGULATIONS & PRECAUTIONS:

PRIVACY
As a telephone user, you have come to assume a certain standard of privacy when you place or receive a telephone call via the traditional wireline systems. However, because cellular radiotelephones utilize radio transmissions to effect calls, the same standard cannot always be assured. While it is unlawful for an unauthorized person to divulge or use any information obtained from intercepting or "listening in on" conversations intended for others, you should not assume that your conversation is completely secure. Commercially available scanning equipment can permit a third party to monitor the radio channels used for cellular telephone calls.

Finally, a universal warning.. Next step is to get it on a label to be placed on the cell phone, rather than on page 82 of the users manual!

Still, Motorola deserves a lot of credit!

2850. TRADE Bird 4391 Lab. Meter!

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: 5doc@dxnet.com
Message-ID: <33905010.60582@news.dxnet.com>
Source record: 196003
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap,rec.video.cable-tv,rec.radio.amature.equipment

WOW!

I have a "BIRD RF POWER ANALYST" VSWR/Power Bridge Meter, Model 4391 with Digital Display to four digits! Used for Laboratory, Commercial Broadcast Transmitters ~ TV, AM/FM/SW/etc., measurements, adjustments and calibration. Outstanding for low power (mW) use too!

Push Buttons on the front panel select: FWD CW, RFL CW, SWR, 'DELTA', FWD PEP, RFL PEP, % MOD, MIN/MAX (Memories), FWD DBm, RFL DBm, and RTN LSS.

Front Panel Switches MULTIPLY the SCALE and use of single Elements as follows: x1, x10, x100, and 2.5, 10 and 5. This allows MANY power settings from a single slug!

The package includes the following Elements: 1,000 Watts, 5,000 Watts and 10,000 Watts; all three Elements are 50~125MHz.

*** PLEASE NOTE! I DO NOT want to sell ANY of the Elements without the Meter... please don't ask.

This Laboratory-Grade Meter is supplied with Type 'N' connectors on the Input and Output. Connectors can be changed to other types (avail. from Bird). Included is a durable Carry Case (Parsons factory option), with foam inside to fit. Internal Rechargeable Battery Pack, AC Power Cord and one 'N' to 'BNC' Adaptor are also included. The Equipment is in Grade A- condition.

---------- ---------- ----------

*** What I want is to TRADE all of the above for a working Base Scanner that allows Computer Control (a must). I prefer a scanner that has not been modified with internal or external computer interface board(s). I will consider a Portable Scanner in a Base configuration, but really prefer a base-type scanner. I also need full 900MHz+ coverage and required Software.

As a LAST resort, I will consider a PRO-2006 (or better) with Computer Interface Board installed and working.

Can we work a deal??

Tony

2852. Probe software.

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: John Martin <jmartin@ww-interlink.net>
Message-ID: <01bc6d4f$345a2c20$870a0cd1@ww-interlink.jmartin>
Source record: 196005

Has any body had much experience with Probe scanner control software? I have been looking for some info on it on the web with little success. I am hoping to use it with my Pro 2035 with Optoelectronics interface. I would also like to set up an old 286, or 386 computer to run this (and Message Tracker) so as to leave my 'main' pc free. Has anyone else tried this sort of thing? PC technical point- can I run Windows 3.11 on a machine using a monochrome screen? I hope that I can so that I can run a couple of programs at once (Message tracker and Probe, or Scanstar), and avoid the limitations of DOS.

If any one has any experience with any of this, and would like to offer advise or comment to the group in regards to these questions, please post to group or email me. Thank you very much.

Umm, last I checked, *all* scanners sold after 1994 had to have cellular freqs deleted..... The UBC9000XLT is not cellular restorable, from what I have been told. You can, however, get a GRE Superconverter that converts 800-910 megahertz to 400-510 megahertz.

Hi there. I'm looking for an updated list of Utah Highway Patrol frequencies. I'm going to be driving through the area, and it's always kinda fun to hear what's going on. I have Monitor America 3rd edtion and just wondered if there are any updates. Thanks!

Simply put a TrunkTracker is a scanner that allows you to listen to
Motorola trunking systems. What it is is a receiver that does basically
what a trunking radio does to receive. You can get the Uniden scanner
and for a Type II system do just a little setup and you can hear
trunking systems.

I will stop here since you said you did not want a full lecture. I
could
talk for days about the TrunkTracker and trunking systems.

Jim

Hi,I have read a couple of posts on this group
about the TT limitations as far as monitoring
car-to-car calls???
I don't know,I'm asking,does this mean if an
officer is in his car and he radios another officer in
his car the TT will not pick this up???
What's this private mode I've heard about?

Thanks

2862. Moto trunked sys info (in re: 235XLT)

Newsgroup: rec.radio.scanner

I've seen several posts about people trying to scan systems with more than 30 freqs on a single trunked system. It has been my understanding that Motorola systems use no more than 30 _repeater output_ frequencies, and this info seems to be confirmed by JTWard11, who posted "and that no system uses more than 30 for voice trunking.
This may be outdated info, but I got it from Motorola yesterday." If I recall right, when these systems first came out, 20 was the max. Hopefully it never will go beyond 30, or the 235XLT will have to be put out to pasture (unless someone can come up with a mod; perhaps Uniden will think future-wise in design of future TTs and put more room, just in case).
Please keep in mind while looking at liscense info, that for each repeater frequency, there is an input frequency. The Columbus, Ohio city system would have approx. 60 frequencies assigned. Half of those would fall from around 806-825 (guess, don't have listing handy), and those would be the repeater input. The other half would be ~850MHz and higher (45MHz higher than the repeater input). This is the _output_ side of the repeater, and _this_ is what needs to be programmed into the BC235XLT. So for all practical purposes, there are only half the frequencies. It is also true that not all of the freqs assigned in the 800 band are on the trunked system. Some may be mutual aid, MDT, special signaling, conventional dispatching, and so on.

So make sure when programming....use only the repeater output (frequencies greater than 851).

I'd be intersted in hearing about systems that have 30+ confirmed repeater output freqs on a single trunked system.

Motorola systems experts, please feel free to correct any errors.

Hi Karsten,

McDonalds uses the following frequency ranges in Germany

Speaker 466.490 - 466.650 20 khz step.
Headset 456.490 - 456.650 20 khz step.

I've had confirmed reports of 466.490 for a McDonalds in
the City of Aachen and 466.530 for a McDonalds in the
Village of Wuerselen.

Dave,

I'm looking forward to your input on Type I mapping problems. It would help with some of the Type I systems that are in the Phoenix area. I can help with a few of your questions.

> Will it be possible to monitor a type I system in bank 1 and a type II system in bank II without changing the map?

Each bank can be set up for either a unique Type I fleet map or for a Type II system without affecting any other banks. Each Type I bank can have its own fleet map from either 16 preset maps or by programming your own map. Your limited to scanning only one trunked bank at a time though.

> The Charlotte Mecklenburg Public Safety Trunk is a Type II Smart-Zone system consisting of around 50 licensed freqs.

Each bank will only accept 30 channels / frequencies and will only scan one bank at a time if in trunk mode. However, I've locked out every channel in a trunked bank with the exception of the currently active control channel and the TrunkTracker still worked. It proved that the TT just needs the frequencies for the TRS in order to search for the active control channel. Initial search of a trunked bank starts off by searching the frequencies in the bank until it locks onto the control channel. Therefore, you should be able to get around the 31+ frequency systems by either splitting them up into two trunk banks and scanning each one separately to see if the TT locks up on a control channel or by using only one bank that you may have to add/delete control channel frequencies to.

> I have heard that the radio will do either trunking or conventional but not both at the same time - Is this true?

You're correct in the fact that the TT will only scan a conventional or a trunked system one at a time, but not together.

Scott

> and NJ Transit goes to about 36 frequencies. Any suggestions?

Each bank will only accept 30 channels / frequencies and will only scan one bank at a time if in trunk mode. However, I've locked out every channel in a trunked bank with the exception of the currently active control channel and the TrunkTracker still worked. It proved that the TT just needs the frequencies for the TRS in order to search for the active control channel. Initial search of a trunked bank starts off by searching the frequencies in the bank until it locks onto the control channel. Therefore, you should be able to get around the 31+ frequency systems by either splitting them up into two trunk banks and scanning each one separately to see if the TT locks up on a control channel or by using only one bank that you may have to add/delete control channel frequencies to.

All of the Phoenix systems are under 31 frequencies so I've yet to try out my theory, but it should work. Let me know how it goes.

I need help in getting good scanner audio. I own a PRO-51 and a SC150. Neither provides good audio in even moderate noise conditions. What can be done to solve this problem? Has anyone found a decent small lapel speaker? I want something that provides the best audio (volume and clarity) in the smallest package.

Anyone have any advice?

Thanks in advance!

It's not the food orders that most people want to listen to. The employees have a switch on their headsets that allow them to communicate with each other internally. You would be suprised at what you can hear!

If you get a chance, you should check out the August and November issues of Monitoring Times. They contain articles on Fast Food monitoring.

The article in the August issue of MT can be viewed online at:

John-
Probe is a fantastic piece of software. It makes scanning a breeze. I
have tried other software for the OS535, but nothing compares to the flexibility,
speed, ease of use. The best place to read up on Probe is at
http://home.ptd.net/~pro2006/probe.html which is a website put up by Steve
Hancock.
Steve has listed several reviews on the latest version 3.0. I would first
read the PROBE 2.0 INFORMATION and then the PROBE 3.0 INFORMATION. I would then
look through the reviews. The software has tons of features that are hard to
comprehend unless you are using the software.
I use Probe under Windows 95 in a DOS window and get very good results.
I also have RecAll running (voice-activated recorder) and can be surfing the
net, downloading, IRC, etc. I would tend to shy away from trying to use
Windows 3.11 for multitasking. It would be best to run Probe straight in DOS.
There are quite a few Probe users, if you have a question about the program, go
ahead and e-mail me or post another message to the newsgroups. We will make
sure that it is answered.

Steve,
For that price, you'd be better off with the Pro-60 which is due to
go on
sale sometime soon I believe(June 1st?). If you can't get a Pro-60, then
for about $40 more you can get the new RELM HS200 which is a great
radio.
The biggest differences are that the HS200 has LOTS better
inteference
rejection and better and louder audio. The keypad also lights up for
night
work. Both have 200 channels and scan/search very fast.
The HS200 does have 100 search-skip frequencies, CTCSS/DCS decode, an
S-meter and comes with metal belt-clip and AC adaptor. The Pro-51 has
none
of this.
Best of luck and feel free to e-mail me if you have any other
questions.

No problem. Sign the licensing agreemtent, and $700.00 dollars
for the software package, and a hardware package.

Of course, this will not include the HT600, as old as it is.

No problemo!

(BTW, that is dealer cost, so I am cutting you a break!)

Bernie,

Idiots abound, as you can see by the reply you got that is partially quoted above.

Either join us on SCAN-L, or lets chat E-mail, and we will get you started Trunktracking!

And, if you don't know, ya gotta ask, right?
The PLL (Phased Locked Loop) is the part of the scanner that synthesizes
the freqs you tune to.
The LO is the Local Oscillator, which brings the Radio Frequencies the
PLL synthesizes down to the audio frequencies we can hear.
This is, of course, the Reader's Digest Condensed Version.

There's a huge difference between Waco/Ruby Ridge and the Texas Republic people.
The TR group that hit the headlines was considered, by their own compatriots, to be looking for a firefight; indeed, doing all they could to start one.
It should also be understood that the Feds' only part in that was as negotiators, and that's it. And they did get all but two to surrender.
And, of those two, one was shot in a firefight that *he* started.
I wonder what is to be expected when you try to secede from the union (without first being a state, at that), collect huge amounts of money fraudulently, clog the courts with false claims, terrorize the locals, and kidnap two innocent people (wounding one in the process)? A spot on Oprah?
Let's not let our paranoia get the best of us here.

I would sincerely suggest that you get Bill Cheek's book, Scanner
Modification Handbook (the first one, not vol.2). This is not a mod
someone can tell you about here or in Email.
And, it's 3200 channels (Mod 19).

> > William Lee
> Wouldn't that be illegal?

a good compromise between performance and bulk would be the Wilson 1000
with 5 inch mag mount. 50-60 bucks will get you a very well performing
antenna that is not as tall as the "king" sized whip yet performs MUCH
better than the 20" loaded whip designs.

i use one with my ic 706 and have it tuned for the 10m FM RPTR section.
great results!

Here we go again! Laws making more and more of us criminals! Thats
the bad side of having Congress and a president who go to their offices
every day. Here in Texas, we have the right idea. Our legislature only
meets every other year, but we still have some of the highest taxes on
earth, but that has to do with the bleeding hearts on the left.
I use a long stretch of wire for my CB antenna. I suppose now that I am
in violation of another law! HEHE! I would really like to know if the
half-wave junk is true though. But, I am not about to stop using the
several wavelengths of wire in my attic! It works great with a tuner!

And, for those telecom industry officials who might be using our
messages as a means to garner support for more legislation and control,
I am holding up a hand and a finger.

2896. TrunkTracking Orange County FL Thankfully A Type 2 System???

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: TrunkTracker@webtv.net
Message-ID: <5mlu4e$f5p$1@newsd-199.bryant.webtv.net>
Source record: 196140

Well, my Uniden BC-235XLT TrunkTracker came in today. Here are a couple of concerns that I wish to share with you folks in the group.

First, The Orange County Florida Public Safety Type 2 system has 40 Licensed Frequencies. The scanners System Trunking Bank only holds 30..BIG, BIG MISTAKE BY UNIDEN. I wonder why they did not create a bank of 50 with 20 banks equating to a 1000 channel scanner.

Second, If I lived in an area utilizing a Type 1 system, I would be pulling out my hair about now...and wanting to return this scanner to whomever I purchased it from.
BLOCKS... SIZE CODES...what a pain in the rear end.

Mark my words...a feel confident that a majority of the complaint calls to be received by Uniden will deal with the issue of attempting to explain to the customer "How to program a Type 1 trunking system into the BC-235xlt".

Thank God that I have my Motorola MTS-2000 for primary monitoring purposes, it has been and always will be #1 in my book!

>
Wow I thought I was bad. The scanner goes with you every
where?

I wonder Roger if you have tried a active noise
cancelling headphone yet. It seems to me that would be
ideal while mowing the lawn (or having sex <grin>) if you
are listening to the scanner all the time.

I saw these for $79 on the web. I think it was ACE
communciations that had them. I never got around to
ordering a set since my big application is to use
them when mobile and the law frowns upon headsets in a
vehicle.

seems like having people to send you money orders i great and all but
what about the person sending the money orders what kind of a guarantee
do they have they will send your stuff once the money order clears seems
sort of one sided to me,i have only made one trade here on the net so
far and that worked out great,i called the guy up on the phone to
confirm his items and ok everything at first he wanted to send cod which
i guess that is fair enough but i told him if he would go ahead and ship
it and i would get him a check out right away but anyway it was just as
he said i was very happy with my items i purchased and hope he was also
but anyway the money order seems to be one sided deal what security does
the buyer have?

From my experience with a smartnet II system in Warren County, Ohio,
the low-order nybble (4-bits) of the group ID are some status-type bits.
I've only identified one such bit, 0x02, as meaning the caller has pressed
an 'emergency' button on the radio. Perhaps you've identified meanings
for more of the bits.... (which number did you see for this patch?)

>I recently purchased two crystal controlled Bearcat scanners
>... and I'm trying to find manuals ..
>One is an old Bearcat IV...The other radio is a Bearcat "Thin Scan."
> The Thin Scan says on the back cover: "MODEL NO. BC FOUR
>SIX TS" .... Anyone know anything about these and also
>where I might find a manual? ..

The double conversion Bearcat Thin Scan appeared in various channel
and band configurations and employed a 10.8 MHz first IF. Variations
of the same scanners, but with 10.7 MHz first IFs, were sold
under the Fanon and Regency labels, too. I think all were
manufactured by Sanyo.

From the FAQ SCANNER RADIO REVIEW BRIEFS:

Bearcat IV (Electra): 8 channel crystal controlled scanner.
Newer version of Bearcat III but contains front-end
circuitry for VHF-low, VHF-high, and UHF bands. Better
selectivity than Bearcat III or 12 due to having three
instead of two 10.8 MHz IF filters. No aircraft band
coverage. Front mount speaker sounds good. No rescan
delay.

From the FAQ BUYING A USED SCANNER RADIO:

The re-incorporated Electra Corporation, (317)326-4419, is
able to effect repairs on some older (pre-Uniden) Bearcat
scanners. They sell crystals, antennas, power cords,
owner's manuals ($11 ea). Electra Corporation is located at
251 N. 300 W. Greenfield, IN 46140-8496.

>it???......
>'nuff said

You took the words right out of my mouth, Dave! This, incidentally, is a good example for the folks who shun ebay auctions, preferring to deal directly with the seller and 'develop a personal relationship'. The ebay feedback feature affords some measure of assurance in deals like this; if a buyer has 50 positive comments in his feedback file, and no negatives, it won't guarantee that you'll get your money (assuming you are unwise enough to ship before receiving payment), but you can be fairly sure that the deal will go through satisfactorily. Apparently, the person in question ripped the seller off, which is certainly reprehensible, but why in the world did he ship first and expect payment later?

That's a hoot because originally UPS was set up to compete against the
U.S.
Postal system's Parcel Post. It was a well known fact when I was growing
up that your package may or may not arrive via the Post Office. And if
it did arrive, it usually looked like King Kong had handled it.

>All carriers will loose
> something every so often, but I have never lost anything using the
> regular mail system.
>
> I would say UPS is in trouble because I hear from customers these
> kinds of complaints daily now.

Hey, last week I sold a BC3000xlt to a guy up in Michigan. Remembering
all the complaints against UPS I'd seen on the net, I sent the scanner
Fedex Cod. It got to the buyer two days later in advertised shape and
the very next day a Fedex guy came to my door with a smile and my
Cashier's check.

I guess the point is, why use a company clearly in decline like UPS when
the
competition is so good? Sure, I paid a few bucks more. But I'm not
wondering
where the scanner or my money is like some poor souls in other posts.

Good listening,
Ron Cain

Jerry, see my earlier post regarding the ebay auction feedback feature. I have sold hundreds of items on the net, most through ebay, but several dozen through newsgroups, and have always asked for payment in advance. No one has ever questioned this, or refused to do so. I have also bought a number of items, again mostly through ebay, but also in newsgroups, and have always expected to pay in advance. If you order something by mail from a commercial firm, (which may be a fly-by-night operation ready to bail out with your money), you always pay in advance, either by credit card or prepayment; notice that TV offers for the most part no longer accept COD orders either. Also, with COD, the discussion a while back about the delay and problems with getting your payment from UPS should make you wary of that. The only security you have as a buyer is the reputation of the seller; this may be easily determined if the firm is a nationally-known one with a fine rep, or if you are buying from someone such as an ebay auction seller who has a high positive feedback rating. One would expect fair treatment from a brother ham, also, but past postings in this group bring that into question as well.

2922. Re: Bearcat BCT-7

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: rscafuto@sprynet.com
Message-ID: <338edc35.151428439@news.sprynet.com>
Source record: 196166

I bought the BCT-7 from DAMARK catalog for 200.00. It comes with a suction cup vehicle antenna (works OK), an AC and DC adapter, and a base antenna (junk). I am happy with it. As a traveler I found it very annoying to be programming in all the freqs for all the different areas I go through. The "Alert" for the Highway Patrol actually works! Being able to add freqs to the scanners pre-programmed ones is a great feature. The only draw back is that you can not "add" the banks (other than highway and police) together. You have to choose whether you want DOT or Police or Fire or News, etc. Can't do it all at once.

Hope this helps.

John, try searching the WWW for +BC200 +modifications. There you should find a site that describes mods for your scanner,
including a fix for short battery life...a defect in some scanners from the factory. In fact, the article sez Uniden will fix it for free
or you can do it yourself. Hope this helps.

While I agree with you that it will require the same or more keystrokes,
it may be easier to use the keys on the computer than those itty bitty
buttons on the HT. Plus, with a computer, you can different files for
different areas on the country, and program easily when you travel.

Rich-

BTW, I programmed mine by hand already, and I'll have to do it again when
the software (if it ever does) comes out ! The radio is real nice, I
like it a lot !

F O R S A L E

MOTOROLA MTX9000 fm handi-talkie radio,
model H01WCF4DB5AN NX type WCMA.
900mHz range. With charger and info.
Only $699.

PCMCIA Sound Card --- by AMP. Includes software,
cables, microphone.
V-Synth wavetable synthesizer
Wave SE sound editor
Stratos MIDI software
MIDI Tune-Up
Windows Sound System software
Cardsoft Card and Socket Services
Traveler adapter module
Microphone
Compliant with PCMCIA Release 2.1
12-bit recording and playback☐
5 sampling rates
Turtle Beach Hurricane architecture
Thin-profile Type II card
requires:
Type II or III PCMCIA socket
386, 486, or Pentium processor
4MB of Ram
$65 + shipping..

------------------- F L A S H L I G H T S ---------------------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also
has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$8 each + shipping. Only 9 available.

..... FOR YOUR DRIVING PLEASURE .....
1929 Mercedes SSK kitcar on VW chassis. Just completed, never titled.
Yellow, with brown fenders and running board, tan convertible top, side
curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 39.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.
ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15
.
add shipping to all prices.
if interested, leave e-mail...

Nice to see a CBer not being knocked for a change.
I'll agree to dissagree on the mobile amp Will, my friend G3NNY and
myself run full legal in the mobile, to say we get jealous/sarcastic
comments from the megabuck base stations with a dummy load on a stick
for an antenna, is a severe under-statement. We have a much modded
BugCatcher and on 160m we can rattle most loudspeakers around the
country, even the dummyload on a stick op's with a deaf receiver.
We're trying to tell them to get their act together, and we're only
running a 13'6" whip. TopBand, a most difficult band to master!

Oh, Gees! I had to de-lurk for this one. Do you know anything about
the publishing business? Or people who do things out of a love for what
they are doing? Let me clue you in. I am a PhD Candidate, currently
writing my dissertation. I am *paying* for the privilidge of writing
what will essentially be my first book, and when it is published, I will
probably, if I am lucky, make about $5000 off of it. Meanwhile, I will
be about $50,000 in *debt* when I finish my degree. Hopefully, I will
land a $40,000 a year job when I'm done! So, why am I doing this? Am I
gonna get rich off of this? Not likely.

: Thanks
: Steve

It depends on your need. If you want to listen to cell phone conversation, the Pro51's "problem" will allow you just that. The 51 is prone to intermod, and freq. images, i.e reception appears at the freq. it's not supposed to be. Just ask Masa :-)
If you care about cell phone frequencies, the Pro60 is a much better unit for the same price (Sale). It has wide coverage (Mil Air + WFM) and its triple conversion will greatly reduce the image problem. But it's much harder to pick up cell images unless the signals are strong.
Hope this help.

I have an aor ar1500 for sale that has 1000 memory channels and 10 search banks
.5mhz to 1300mhz all modes including lower and upper sideband. Has manual bfo
to tune in ssb signals. Bfo can also be used to descramble motorola analog speech inversion scrambled radio communications as well as scrambled cordless phones. Whatever the frequency put in am mode and tune in signal with bfo.
Radio is handheld and is about the size of a RS pro-43 (maybe a bit taller) and comes with original case,manual and charger. $275 or trade for related items.

Thanks KE4LEU

OOps, it should read If you DONT care.
Sorry for the confusion. Food for thought: most of the readers will notify the error becuz it doesn't fit in the context of the paragraph, but computer won't see the inconsistency and make the right but erronuous conclusion. Deep Blue can beat Kasparov at a game of chess because chess is all computation. But Deep Blue will fail at the simplest cognitive test. Kasparov ate his words when he said DB played like god. DB only played like a fast dummy who can do calculation.

What do U think?

2939. Good scanner for volunteer firefighter?

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: Ryan Alyn Porter <rap@endymion.com>
Message-ID: <5mn3e4$87b@mtinsc05.worldnet.att.net>
Source record: 196183

I'm a first responder with Alachua County Fire Rescue, soon to be a volunteer fire fighter. I'm looking for a good scanner for monitoring our emergency channels, because our pagers can only monitor one or two channels at a time and they get less than optimal sound quality. Channels of interest to me in the area transmit from around 462MHz to around 468MHz. I am interested in a scanner that I can set up to only monitor the five or ten channels that I am interested in, and give a special priotiry to the dispatch channel, but I am not even slightly interested in what is going on at the airports, the police channels, etc, and I don't want to be bothered with all of that stuff. Portability is extremely important in my case. I have been looking at a cheapo model from Radio Shack, simply called in the catalogs a "200 Channel Programmable Scanner", which runs off of 4 AA's and has a little rubber duck antenna. Would something so simple and cheap serve my needs? Should I be looking at anything else? Features like a lighted display and headphone capability and the likes would be neat, but not worth a lot of extra money. If anybody can help with a suggestion, I'd really appreciate it.

I included some wrong information in a recent post re the URL of a resource on scanner antennas.

Rich Wells scanner page includes an incredible review of scanner antennas at

http://www.qsl.net:80/n2mca/ANTENNA.HTM

Check it out to save yourself some aggrevation, time, and money.

From: drunyon@abcs.com
Message-ID: <338e2276.0@news.abcs.com>
Source record: 196209

Okay...I've had my TT for about a week now and have been experimenting ever since. Finding out some interesting things...many of which I don't like!!!

First of all...I'm in Indiana and trying to monitor the District 32 (Terre Haute) system. One major problem is that District 32 utilizes 3 different tower sites using 5 different frequencies on each tower. The TT can only monitor one system at a time...you can see the HUGE issue with this.

Secondly, since a Telephone Patch or Private Call (unit to unit) doesn't take place on a normal talk group, the TT won't let you hear it in the Trunked mode.

Thirdly, it appears as though some folks have already gotten wise and are using the Private Call feature more and more. If you're in conventional mode, no problem...but in Trunked mode, you don't hear anything.

Finally, the system I am trying to monitor is a Type II SmartNet variety. This is confirmed!!! All of the talkgroup IDs I've seen so far are 5 digit and end in an EVEN number....

except for one....I just heard a telephone patch call in Trunked mode and the TT showed a 3 digit group number that ended in an ODD number. Why??? What is up with this???

Any input would be welcome...I'll keep posting my findings.

Regards,
DOUG

2953. Arcron Radio Controlled Clock Review

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: bnb@mindspring.com
Message-ID: <338f3463.16335354@news.mindspring.com>
Source record: 196214

I finally received my Arcron Zeit "ARCRON Radio-Controlled Desktop Clock Executive WWVB". That's what it's called in the manual coming with the clock. This is the clock advertised in QST, SWL magazines and several mail order catalogs, selling from $109 to $149.

I have been trying to get all the WWVB clocks that I can, to see how they compare. I have had a Junghans MEGA Desk model for several years, got an Oregon Scientific Time Machine less than a year ago for $89.95 or there abouts, and also have recently purchased the Junghans MEGA Alarm and a MEGA Wall clock.

My personal opinion of the Arcron Zeit:

PROS:

1. A signal strength indicator: bars which let you see where in a room to get the best signal, and how best to orient the clock. A very nice feature when setting up the clock the first time, especially during the day, when the signal will be the hardest to pull out of the noise and interference.

2. The backlight is more uniform than the Junghans MEGA Alarm, but that may be because it has a smaller display. Brighter than theTimeMachine's dim green.

3. Can manually set DST or Standard Time, in case it misses the change. Don't know if this is really of value or not, my TimeMachine and MEGA's never had any problem with the seasonal change.

4. Can show two different time zones at once, of course you lose the date display when you do.

5. An abbreviated instruction card is attached to the bottom of the clock, a nice touch.

CONS:

1. Not as sensitive as the Junghans MEGA's. It would not lock on in locations where the MEGA's would. My office/study is in our basement, below grade. The MEGA's lock on to WWVB whether on the wall or on lower bookcase shelves. The Arcron had to be on the top of the bookcase, near the ceiling to lock on during the day. The Time Machine would NOT sync in the basement, it has to be up in my 2nd floor bedroom.

2. Much smaller display than the MEGA or Time Machine. The MEGA uses the whole front panel of the clock for it's display, The Arcron's display size is 1 1/8 inches high by 1 7/8 inches wide. The character

height of the hh:mm time digits is 3/8 inches. The MEGA hh:mm are 1/2 inch high and the display is 3/4 inches high by 4 3/4 inches wide.

2. Even though the ad in the magazines shows 12/24, that is a "randomly chosen"? date display for December 24. The clock will NOT do 24 hour time. But, neither will the others.

3. Design is much more complicated to set up, 4 pushbuttons, not labeled on clock, so you have to refer to the manual or the chart on the bottom of the clock for their function. Button/switch function are marked on the Time Machine and the MEGA Alarm.

All this said, the Arcron does keep great time, don't see any drift whenever I check it during the day. And yes, I am the guy who sells Junghans MEGA clocks at discount, but I chose to sell them because I like them. I have had the MEGA Shelf/desk clock for over 3 years and it has been trouble free.

2959. Bearcat IV and Bearcat "Thin Scan" manuals

Newsgroup: rec.radio.scanner
Date: 1997-05-30 00:00:00 UTC
From: phoeg@sprynet.com
Message-ID: <339051ac.488667@news.sprynet.com>
Source record: 196220

I recently purchased two crystal controlled Bearcat scanners for $10 (total), and I'm trying to find
manuals--or a source of--for these radios.

One is an old Bearcat IV. I'm guessing that finding a manual, or copy, for this one shouldn't be a
real problem.

The other radio is a Bearcat "Thin Scan." The Thin Scan says on the back cover: "MODEL NO. BC FOUR
SIX TS" It's a six-channel crystal controlled radio. Anyone know anything about these and also
where I might find a manual? I've done web searching for both, but with no luck.

Thanks for any help.

UPS at one time, was very good, but I think they have become too large . I now use the US Post Office for many items I once sent out via UPS. The prices are not very different now either! All carriers will loose something every so often, but I have never lost anything using the regular mail system.

I would say UPS is in trouble because I hear from customers these kinds of complaints daily now.

Okay, there you go. Now, justify the actions of agencies involved in
Ruby Ridge, Waco, West Texas/The Republic of Texas.
In all three instances, innocent people died at the hands of what are
supposed to be up-right law men.
I dont know if we can trust these out of control groups until we have
a decent president who calls for a deep, detailed investigation of the
various agencies involved.
I support any law enforcement agency that lives within the confines of
the law, but what sense does it make for men to break the law trying to
catch/deal with law breakers????? Dont they become one and the same???
Yes, now you have criminals chasing criminals. Not a good situation
for the people who love freedom and who are law abiding citizens.

> questions posted by other subscribers.

Unfortunately, it is MY policy to post in public those issues that
are of general interest to the public, and/or issues that begin in
public.

> At this time, I have nothing to say that could be considered useful or
> beneficial to the group, therefore I am declining your request for a
> public statement. Public statements you may make are done so out of your
> own volition and do not obligate me to respond in-kind.

Correct. I cannot obligate you. You are, ostensibly, a free American.
Conversely, no questions about it, I *am* a free American, and you do
not obligate *me*. You tried, however, by telling the public forum
that I operate out of greed. Now that is a relatively serious charge,
and I thought I'd stand up and be counted for it, and give you an
opportunity to address the horse's mouth.....nice and direct-like.
Or, would you prefer I slunk off like a snake? :-)

> I will not reply to any future comments you may have regarding this
> topic; however, I would be most eager to carry on a dialog with you (on
> the public newsgroup or otherwise) about scanning, radio, electronics,
> and other issues that are meaningful and useful to either or both of us.
> I flatly refuse to participate in any "flamefest".

Cool. I've had no desire to flame with you. Conversely, this is now
the third time I'm asking you for *additions* to your nastily

expressed opinion, as to HOW YOU THINK I can do my job better so as to not come off as "greedy". No flames there, pal. But you keep ignoring this request, which seems about as close to flames as you can get without open fire. Calling me "greedy" pretty much WAS open fire, though I'm humble enough to ask you to let me know how I should improve on that score.

> I would also like to apologize and express my regret that you find my
> opinions abrasive.

We haven't established my "findings" of your humble opinions yet. I am trying to find out WHY you think I am greedy. I explained the situation of the writing and publishing industry to you.....and you ignored it. So I have to ask you AGAIN how you think I should improve myself and the way I do things.

> Yet, I must stress again that they are merely my
> opinions and should not be interpreted as any more than that.

I don't think there was anything to interpret relative to your bold-faced calling me "greedy". I mean it sounded clear enough. Did you mean something else......or just HOW should I take your carefully considered "opinions"?

This is, of course, posted in public....so that there is no doubt about who said what and how. I will continue to entertain your carefully considered reply, whether hidden in private or brazenly posted in public. Me, I got nothing to hide, so.............??????

:-)

<kfrazier@nmsu.edu> wrote:

> Is it possible to modify a scanner to receive signals (NON CELL PHONE)
> out of the ranges it was designed for? Specifically a Radio Shack
> Pro-33 to receive between 174 MHz and 380 MHz.

Not possible. The only possibility in the first place would be for
bands designed into the scanner and then deliberately blocked, like
cellular, fer instance. A mfgr would NOT design in 174-380 MHz and
then block it, though. Three distinct areas of a scanner control the
coverage: (1) CPU and its firmware; (2) PLL & L.O. circuits, and
(3) the RF Front End (Preselector).

Each of the three represents COST in most cases, exception being the
800-900 MHz band where the cellular segments are illegal, but the rest
of the band is legit. So blockage of the cellular segments is
standard practice and now required by law. It is no longer feasible to
"restore" those band segments since the firmware for them does not
exist in the CPU.

> What is the legality of ANY scanner modification?

Hardly in question so long as "any" mod is done by the Owner. If done
by a pro shop, then there are a number of considerations that we'll
not get into here.

Steve,
I bought a PRO-51 on sale several months ago and I regret it. The
police in my city use freq 460.05, 460.15, and 460.325. If I'm stopped
on one channel and somebody talks on the other it bleeds through
completely. It's sitting on a shelf somewhere until I figure out how to
get rid of it. If you have to have one, I'll sell you mine cheap.

Hello All,

Yesterday, here in Orlando, Florida, we received TV news coverage of the Uniden BC-235xlt Trunktracker on our 6 PM ...
Channel 6 NEWS.

Yesterday morning I received a telephone call and purchase order for the order of 12 BC235xlt's from our local CBS affiliate WCPX, here in Orlando. They were just getting ready to purchase MOTOROLA MCS2000 mobile transceives, not any more.....thanks to The TrunkTracker!

They were so excited about the unit that they wanted me to help them film a news story about the TrunkTracker....so we did!

I have done several news interviews for local TV stations in the past, here in Orlando....as I own a High Tech. Law Enforcement Electronics business.

I felt that the news story turned out well, though the slant of the story was owners of the TrunkTracker being able to listen to WHAT USED TO BE PRIVATE....trunked public safety conversations. NOT!!!

Also, the story focused in on the fact that what was ONCE a modern Orange County trunked radio system....is now an unsecure radio system of the past..... (YOU GO, GIRL) TrunkTracker.

Lastly, that leads me to the Orange County talkgroup list that I have have created. Seems that the County has a SMARTZONE system that utilizes SMARTNET and STARTSITE technology with 40 licensed channels.
They have been utilizing the same CONTROL CHANNEL for 4 years...859.4375....A VERY STUPID MOVE, as this leads to repeater FAILURE....GOOD JOB, RAY CARLSON! (Orange County's illustrious over protective Telecommunications Manager).

My concern being this....can they utilize multiple FCC Callsigns and use all 40 channels randomly....30 per TT Trunk Bank/40 in System)= 3/4 or 75% accuracy is assuring the completeness of a trunked conversation.

Take Care All....and GO TrunkTracker!!!

Joe

You are listened on the wrong frequencies. Using your BC3000XLT,
search 360 - 385 MHz, NFM mode, 5 kHz steps.

What do you hear? :-)

Wrongo, Steve my friend. The 3000XLT does pick up cellular images, just not in the area where you were looking. Try down in the 320 to 400 range. My main interest in military aviation, and the damn cell calls interfere. You do have to be fairly close to a transmitter site, though.

For a guy who is in the business of selling stuff you ought to check out what your competition is selling the unit for.

Grove is selling it for $299. And I think shipping is included.

What good is COD if he gives the UPS man a fake money order? It really sounds to me like the folks at the MO store may have stolen the money Keith gave them and deliberately issued a bad MO.

It seems to me that you beef is with the issuer of the MO. A money order is supposed to be as good as cash. Usually, to stop payment on a MO the buyer has to post a bond equal to the amount, to settle any possible claims. Sue the MO company!

Nope. If you lock out all of the channels it will still work. But I
programmed the data channel of the day for the Columbus, Ohio system
into a seperate bank and this did not work. It would not search or
display talk group id's, nor could you manually go to a specific talk
group.

By the way, Moto Hex codes for Smartnet Systems are 3 digit numbers.
When doing the conversion mentioned, you need to drop the trailing 0.
For example, the conversion gives you 0290. The actual Moto code is 029.
Also, the codes should always convert to a number ending in zero. Some
Private Call or Interconnect, or even "All Talk Group" talkgroups seem
to show a goofy number on the TTracker. It is very simple to make a form
that shows, starting with Moto Code 001, 003, 005,007, 009, 00B, 00D,
00F, 011 etc on one side, and then starting at 16, add 32 digits per
talkgroup along the other row. This provides an immediate Moto/TTracker
Conversion.
001=16
003=48
005=80
007=112
etc, etc.
This goes as far as you want it to go. Watch your tracker codes for a
few days, take the highest number you ever see, divide by 32, and you
will see how many pages of numberes you will have to come up with.

Tom

Attention Central Ohio Monitors:

The Columbus Frequency Index has been updated for 6-1-97.
Check out the new mailing list info and subscribe today (its free). Or
contact the CFI at CFI@radiolink.net with the words "subscribe" and your
name or initials in the body to put your name on the list--it is that
easy!

Remember, the CFI is always looking for new additions, and if you want to
add other counties in Ohio that don't have frequency info on the web,
contact the CFI and we will see what we can do!

VERY INTERESTING
Applying that knowledge to the spreadsheet data for Cobb
County shows that Mike had 37 errors in TG identification
(111 hits 74 correct). Most of these Mike had marked
unkown for group identification. Others were marked
'private' or DVP or some such. That indicates to me that
the low order bits 0-7 are used as flags in the stream of
digital data. Ie say 3 was set then the radio would be
receiving digital data in that talk group would be my
conclusion. Anyway when I cleaned up the sheet by
deleting the bad rows the sheet suddenly became more
coherent and a clear pattern emerged!

Those bits probably activate some device or circuit
within the radio if set?

Applying what you wrote also indicates that if these
decimal codes are correctly copied down then there may be
around 600 useable talk groups in the Cobb System since
the highest accurate code was Police 19600 4C90h

BTW a general user can check his TG code to see if it is
going to correspond to a legitimate moto TG hex code by
diving the decimal number displayed by TT by 32 and
checking that there is no data to the right of the
decimal place. I forget what that part of the number is
called at this moment.

I now have professional sports (MLB, NFL, NBA, and NHL) frequencies on my web page at http://pages.prodigy.net/hounddog/home.html

Any additions you have, especially to the NBA and NHL page, would be greatly appreciated.

3020. This Newsgroup: FLAMES

Newsgroup: rec.radio.scanner
Date: 1997-05-31 00:00:00 UTC
From: jonlaw@usaor.net
Message-ID: <3390E817.1B58@usaor.net>
Source record: 195880

Of the numerous postings, I have noticed so many FLAMES that I just cleared the newsgroup and hope when I come back any new postings will be regarding the subject line: rec.radio.scanner.

I can't figure out why there are so many bad feelings when you people don't even know each other on a person to person basis.

One must consider that we all have our own thoughts and ideas weather we like them or not. If you expect someone to consider yours you should also consider their's. It's really sad.

Thank you

Actually, although on the surface this sounds like a stupid
move, but in reality, with continous duty transmitters, (Which
I am sure they have) that control channel transmitter will
keep operating as long, if not longer, (Due to the fact that
there will be no surge as the transmitters are keyed) than the
other transmitters on the system.

So, GOOD JOB, RAY CARLSON!

Ah, more misinformation from old Bill.

National forests are still for the most part, using 160's, and some
UHF. NOT 800.

State forests may be different, but he was not asking about STATE!

No - it is not type accepted nor is it legal to use the HTX-204 on
the FRS.

Source record: 195937

>>Actually, all GMRS users I've heard have never given their callsigns.
>>I have heard the local repeaters send their IDs, but never individual
>>users.

Unfortunate.

I am Chair of the Repeater Users Group out in Southern California. Over 300 Members...most of whom are also REACTers.

I am responsible that all new REACTers are properly trained on our system of over 20 GMRS repeaters...and each and every User abides by applicable FCC regulations.

We are also experiencing an unprecedented proportion of our new Users' completion of personal GMRS license apps (we include this in our training sessions).

Just FYI....

Does anyone know if the HTX204 meets FCC spectral requirements when used on the Family Radio Service frequencies? This would be useful to me as I'm the only living ham in the family. Also, if the radio meets the spectral requirements but has not been type accepted for that application, is it still legal to use? Lastly, does anyone have a listing of the specific 14 frequencies used for FRS? Thanks for any info.

Eric (ENBOE@aol.com) (K0AVW)

You must use a type-accepted FRS radio to operate on FRS. A modified
HTX204 is not accepted for FRS use.

Two different models.

BC-9000XLT as distributed by Uniden in the USA/Canada has those frequencies
used by US Cellular "blocked".

UBC-9000XLT as in thread title has full 760-1300MHz coverage with "no gaps"
^ and is distributed by Uniden in Europe, Australia etc.

Anyone with any gray matter between their ears should KNOW that:
Cellular Phones, Cordless Phones, and Two-way radios, have antennas and radiate RF....anyone with a receiver that can tune to the transmit frequency CAN hear what's being said. Don't expect privacy unless digital encryption is involved or if both parties are using a land line or wired connection or wired intercom!

why do you expect sometimes on the scanner you hear someone asking for a "21" or 10-21....

I've heard boyfriend-girlfriend arguements, mothers talking to their children, honey, I'll be late..Relators, Construction crews ordering materials..Drug deals, People ordering with their credit card, and people reporting traffic hazards...

all this info was heard in the "clear" on various frequencies between 1 mhz and 1300mhz!

in Ca, the state parks dept uses 800mhz frequencies. However, the USFS
uses frequencies in the 163-171 mhz range or 410-415mhz range!
these frequencies are pretty standard USFS frequencies nationwide!

>Still, Motorola deserves a lot of credit!

NOT!!! Page 82????? Who reads any manual after they get the thing to work?
If you can pick up and make a call, don't you just pitch the manual? They
have that warning burried on p 82 so nobody sees it! It's simply a CYA (cover
your ass) maneuver so they don't get sued. If they had a sticker on the front
of the phone, THEN, they would deserve a lot of credit.

3048. More TrunkTracker trouble

Newsgroup: rec.radio.scanner
Date: 1997-05-31 00:00:00 UTC
From: drunyon@abcs.com
Message-ID: <339046f8.0@news.abcs.com>
Source record: 195958

The more I play with my new TrunkTracker, the more I question it. Aside from the problems I've discovered and discussed in previous posts, I have now spotted something ever stranger.

I first thought that Telephone Interconnect calls did not register with a group ID when searching in the TRUNK mode. This is not completely true!

While listening the other night, all of a sudden I start hearing touch tones, ringing, and a two sided conversation between a trooper and his wife. The TT registered an ID code ending with an odd number. This fact is interesting as it is a SmartNet II system and all other group ID codes end in an even number.

Now for something even stranger....

At first, the ID code was "193"... a short time after the call was connected, the ID code for the call switched to "4022"....and about halfway through the call, the ID code in the display instantly jumped to "11882".

Somebody PLEASE explain! The folks at Uniden told me that this wasn't possible. I know what I saw! My experience with them over the years has been extremely poor.

Regards,
DOUG

> Could someone tell me where i can find the modification for
> PRO-34 scanner. I would like to modified it so it can have
> 1000 memories. Thank you in advance. Phil.

There isn't a mod for 1000 memories. Basically, the memory mods for the PRO-34 go in a series like this:

400-ch 3200-ch 12,600-ch

Take your pick. Trouble is.....none are really so simple that can be reliably slapped into a few lines of ASCII text; nothing like "clip a diode" or "add a resistor".

Memory mods have been thoroughly published and graphically depicted in my three books and in the monthly WORLD SCANNER REPOT, regretfully not free materials.

Volume 1 of my SCANNER MODIFICATION HANDBOOK is most relevant to the PRO-34 memory mods, but it has been updated among my other two books and in the WSR. You could do well with just Vol-1 if you subtitute the DIP chip with a modern SMT version.

#->>
#->> Thanks in advance
#->> **********
#->>
#->> mike@miti.demon.co.uk
#->>
#->> Buckinghamshire, U.K.
#->Check their web page at www.grove.net. Price is US $59.95. I have been
#->using one for several years and it works very well. I don't know if they
#->will ship to the U.K. though.
#->Dick

I just KNOW I'm going to get grief from someone about this message,
but I use both the Grove Scantenna and Grove's Scanner Beam.

From several years of of use on both of them, they are the same height
above my house, and they both are connected to Grove's PRE-5 antenna
preamp.

It is my expereince that if you don't mind a multi-directional antenna,
the Scantenna beats any other antenna I've ever used including
the scanner beam! Period!

I'm not going to go into a lot of details here...not necessary. But
these two (Scantenna/Beam) have been compared against
several other types of antennas including discones and the
Scantenna simply out performs ever other one I've tried or
compared it against.

Hope this helps!

If you have Windows 95 you can convert from/to binary, hexadecimal,
octal and decimal with ease. Use the calculator function. (It may be
in
Windows 3.1, too, I dunno for sure) Anyway, go to "accessories," then
"calculator." Once in calculator click on "view" then "scientific."
If you have a hex number you want converted to decimal, click on "hex"
and
enter the number. Then click on "dec" and it will display the correct
number.

There still are some Opto boards out there on the shelves, who's CPUs were programmed before the recent change. Its that "remaining stock" thing. Yes, there is a lot more interesting than cell. Pocsag is fun for a few days also, but seeing 20-30 "CNN WORLD NEWS..." click by every 10 minutes along with "CALL ME", and of course "456-8790-911-911-911-911-911-911". Its mainly just the fact that is can be done makes you want to go out and do it....

Kenwood TS-820S - Ditigal Ham Transceiver 120-10 meters. Looks and works good. 100W output. Can be converted to 11 meters. $400

Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks and works good. 100W output. Can be converted to 11 meters. $275

Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks and works good except the S-Meter is not working.250-300W PEP output on SSB. $250.

Siltronix VFO Model 80. $75

Heathkit Hw-101- Tube type Ham Transceiver/with Power Supply 80-10 meters. Receives, but does not transmit. $100.

Heathkit SB-102- Tube type Ham Transceiver/with Power Supply 80-10 meters. No Receives or transmit. $100.

Heathkit SB-110- Tube type 6 Meter Ham Transceiver/with Power Supply. No Receives or transmit. $100.

Yaesu FRG-7 Solid State General Coverage Short wave Receiver. Looks and works Great, except the Power Switch has the tip broken off.but still working OK. $250

National Two/Seventy Ham Receiver with 6 Meters. All Tube with matching speaker $250.

Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $200.

Lafayette, Constat 25- All tube CB Transceiver. Have two. One is working the other for Parts or can be repaired. both for $ 200.

Pal, VFO- 11 meter CB $50.

Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

Sears- 10 channel Crystal Control Table top Scanner. $50
Regency- 10 channel Crystal Control Table top Scanner. Wood case $75

Realistic Pro30- Programable Hand Held 16 Channel scanner. 30-50,108-136, 138-174, 380-512 Mhz. $75

Regency HX2200- Programable Hand Held 20 Channel scanner. 118-950 Mhz including cell. coverage. $100

Craig- 6=94 Reel to Reel Tape Stereo Recorder. $75

AR Inc.- Stereo Amp, all solid state. $150

Heathkit- Model-AA-32 Tube Steteo Amp. $100

Bell Fax Line 1500- Fax and Phone Machine. Was working Great, but stopped working last time I plugged in. $50.

Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $150

Macintosh Plus Computer- Built in Monitor have Keybord, Mouse System Disk and 4 Megs Memory. $200.

286 and 386 Mother boards and Misc Computer Hardware. Controllors, vedio, network cards. Tell me what you need.

Source record: 195971

I respect all of your opinions to my post.

Though you must all realize that the purpose of COD is to make a transaction fair for both the BUYER and SELLER.

The answer is Postal Money Order...here is why...

If the Seller ships the product to the buyer with rocks and or a brick in the box...the buyer can utilize the U.S. postal service for mail fraud protection...leading to criminal prosecution.

If the Seller sends the product to the buyer and receives a Postal Money Order...I am to understand that a STOP PAYMENT cannot be placed on the postal money order...they are relatively speaking, Guaranteed for cashing purposes.

I have found that in researching my incident that MONEY ORDERS ARE NOT GUARANTEED FOR PAYMENT PURPOSES, as is cash. The buyer simply calls the money order company AS KEITH MC CLURE DID, and requests a refund of his monies for the reason of being LOST OR STOLEN..... A COMPLETE LIE...

My point being that if you sell a product on the internet and expect paymet first because you are the SELLER...it allows to buyer to be unprotected if the seller wants to sell to his buyers BRICKS.

Respectfully,

Joe

>
Yes I am certain your tip also applies to Win 3.x. That
ws nice of you to call everyone's attention to a product
built into the win95 package that they can use.

If you have Excel 97 you can automaticly convert these
codes. I guess previous versions of Excel also work.

Mike Martin sent me the plan to Cobb County GA. Trunking
Radios system as he understands it. It is only to a few
keystrokes to improve this by generating a column that
displayed the Uniden talk group decimal codes in Motorola
hex format as you can see from this example.

County Department Uniden Motorola

Cobb County Fire Department 1520 05F0
Cobb County Fire Dispatch 560 0230
Cobb County Fire Private 888 0378
Cobb County Fireground 1 592 0250
Cobb County Fireground 2 624 0270
Cobb County Fireground 3 656 0290
Cobb County Fireground 4 688 02B0

You do this by using an addin function: DEC2HEX. After you have it working properly in one cell, pull down the cell frame to include the entire columm and it will autofill with calculated data using that function as a pattern.

Look at the pattern of starting in fireground one and extending to fireground 4. Each step is exactly 32 Decimal (or 20 Hex or 40 Octal).

I suspect you can also use Excel to look for patterns and calulate Talk Goup codes that should be in the pattern but appear to be missing.

If you can't calulate the TG codes in Motorola format and you have a desire to see them send email a list of your Talk Groups and their decimal codes and I will paste them into Excel and calculate it for you and send them back. Please be sure to use either a tab or comma delimiter so I can convert data easily.

You can get my email address from ICQ.

For the application you've described, almost any low-cost scanner will do. The UHF band, on which your department's freqs are carried will be found on any scanner currently avaliable. However, the scanner you mentioned with 200 channels may be unnecessary for your purposes as you won't need that many presets if you're only monitoring a handful of freqs. A scanner with 50 or fewer channels, such as the Uniden BC-70XLT (20 channels) should do just fine and it goes for about $100 or so. Try a distributor like Scanner World (www.scannerworld.com) if you want to mail-order as it may be cheaper. I'm a volunteer firefighter for the Eagan Fire Dept (MN) and use my scanners primarily for monitoring the local police freq as they are the agency that dispatches us. The police are dispatched to an incident prior to toning fire, so I'm able to get about a 30 second head-start to my station if I hear a call. You might consider doing this as well if your dept has a similar system. Unfortunately, scanners are not legal in motor vehicles in my state, even for firefighters. Make sure you check this before using a scanner in your car.

3071. Money Order FRAUD/UPDATE BEWARE..MC CLURE/WONG

Newsgroup: rec.radio.scanner
Date: 1997-05-31 00:00:00 UTC
From: TrunkTracker@webtv.net
Message-ID: <5mpthd$8k9$1@newsd-199.bryant.webtv.net>
Source record: 195981

I wanted to start off by saying THANK YOU to the many of you that have responded to me in a positive fashion including your condolances of my father's death via E-Mail.

UPS initially reported to me earlier last week that the COD/AOR 8000 was signed for by a "JOHN WONG" not Keith Mc Clure. I suspect that John Wong is either an apartment roomate or an alias.

I spoke the the corporate offices of the MONEY BOX (establishment who sold the 2 money orders in question) yesterday.

They informed me that SOMEONE OTHER THAN Keith Mc Clure (at the same address, they would not divulge WHO) wrote to Integrated Payment Systems (Payer of the Money orders in question) requesting a STOP PAYMENT and asked for a refund of the money orders based on the fact that they had been reported as lost or stolen. They sent THAT person the refund check for the money orders totalling $550.00, within 10 days of the request... CAN YOU BELIEVE THIS!!!

The interesting part of the story is that the refund check for the money orders was RETURNED to Integrated Payment Systems because of a name and or address problem (thats all they would tell me!)

Now, that means Keith Mc Clure or John Wong or whatever his name really is...does not have BOTH the AOR8000 and the MONEY, what a f___ing Nightmare... (For you folks criticizing my profanity)

Now, I need to go after Integrated Payment Systems and KEITH MC CLURE and or JOHN WONG (accepted 8000) for my monies.

I will keep all of you up to date.

Thanks,

Joe

3072. Re: Can the BC3000XLT pick up cellular by using images?

Newsgroup: rec.radio.scanner

Message-ID: <01bc6dff$e465dbe0$27cb92cf@default>
Source record: 195982

Afraid not. The 3000 uses a triple conversion technique to receive freqs which all but eliminates the images common to lower-price scanners which use double conversion instead. Though I've tried, the 895-915MHz range where cells can be heard with other scanners is quiet on the 3000 except for the occasional 900MHz cordless call. The good news is; images and birdies on this scanner are almost non-existant.

3077. Memory Mod for BC-760/950/590/600 & R-1600

Newsgroup: rec.radio.scanner
Date: 1997-05-31 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <338f6b15.59274400@news-server>
Source record: 196046
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Copyright (c) 1997 Bill Cheek <All rights reserved>

If you own any of the following scanners:

BC-760XLT (Uniden)
BC-950XLT (Uniden)
BC-590XLT (Uniden)
BC-600XLT (Uniden)
R-1600 (Regency)

then you can double the memory from 100-ch to 200-ch for FREE or almost free, depending on the contents of your junkbox.

If you are not handy with electronics, then see my article in Monitoring Times, Experimenter's Work Shop, Page 82, June 1997, where there are graphics and gory details for the greenest novice.

If you have some essential savvy and know a resistor from a resister, then here is the quick and dirty method:

1. Find the static RAM memory chip on the solder side of the board known as IC-13. Locate Pin 19. It and Pin 20 are grounded together. Pin 19 is Memory Address A10, and there is no good reason to ground a Memory Address. Unless you want less memory than possible. Why Uniden did that is beyond me....but Uniden pulls a lot of stunts like that.

2. Remove the solder from Pins 19 & 20. Gently lift Pin 19 up and off the trace while the solder joint is melted. Leave Pin 20 grounded (resolder it). Pin 19 must float above the board and not touch anything. Be careful to not break Pin 19 from the IC.

3. Solder one end of a 100-k resistor to the free-floating Pin 19

4. Solder the other end of the 100-k resistor to a nearby ground spot.

5. Solder on end of a 10-k resistor to the joint at Pin 19 and the 100-k resistor.

6. Solder a wire from the free end of the 10-k resistor to one end lug of a SPST switch.

7. Solder a wire from the other lug of the SPST switch to a source of +5vdc in the scanner. There is such a spot about 1/3 inch to the right of Pin 24 of IC13. Use a voltmeter

to verify the source of +5vdc. Pin 24 is sourced to +5v
but I wouldn't solder directly there, if I were you.

8. Voile! You're done. Well, you need to mount the switch
somewhere first.

OPERATION
=========

Each position of the switch offers 100 channels. 100 x 2 = 200.
Thus you will have 2 Blocks of 100-ch each, and otherwise, the
scanner and its programming will be completely "normal". If you
are careful, the original programming should be preserved, thereby
indicating the switch position for "Home" Block. The other switch
position will be for the "New" Block.

If you lost memory and aren't sure, the switch position that turns
off +5v to Pin 19 is the original Block.

If this information isn't complete enough for you to do the mod, then
you need to see Monitoring Times, June 1997, page 82, where MUCH more
detail is offered. If you don't subscribe to MT, they can sell you
a reprint of the article for $2, I think. (800) 438-8155

Dave,

A couple of things. The fleet maps for Type 1 systems are assigned on a bank-by-bank basis, so you can have Type 1s and Type 11s programmed interchangably without problem. It's my understanding that whenever there are more than 30 freqs. assigned to a single system some of those are MDT, mutual aid, etc., and that no system uses more than 30 for voice trunking. This may be outdated info, but I got it from Motorola yesterday.

John

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $100 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies. It's clear from the discussions posted on the Internet that Americans still listen to whatever they want in the privacy of their own homes despite the laws.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a

diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046,

allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The new RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000

channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are

unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer

than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 100 miles or more. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but

carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each | plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain selected business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national |

scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities,

highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

- 2 -

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from | Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features

than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception

of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery

pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in | conventional or trunked domains but not at the same time. | Scans Motorola Type I, II, IIa 800 MHz trunked systems, but | only one trunked system at a time. Programming Type I and | IIa systems requires knowing the Fleet Map ahead of time or | else using exhaustive trial and error. A query feature | identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty | channels. Service search. Data skip. Triple conversion, | 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and | intermod immunity. Fairly good audio. See "The Uniden | Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring | Times, July 1997 or electronic version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more

than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45

MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-

high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high

price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob

Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are | 257.5, 21.4, and 0.455 MHz.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers.

Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place

P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)

dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping
and handling. For an additional $4.00, I will include a
custom frequency allocation histogram, a 0 - 1,000 MHz
"spectrum analyzer-like" display showing spectrum usage by
the transmitters in the map coverage area. Send check or
money order payable to Bob Parnass for $29.95 for standard
or $34.95 for deluxe RadioMap report with histogram.
Include your name, address, and telephone number, along with
center location (nearest intersection of 2 streets, or
latitude & longitude) and mail to: Bob Parnass, 2350 Douglas
Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central
time. For a brochure, send SASE.

Where do you live, John? All I get are local REACT guys on 675 saying "912 to 901 on UHF", no calls, cb 10 codes, and good OPSEC (no names, comm discipline, etc).

No one is paying over $100 for FRS radios here AFAIK.

I am trying to find some information about how to go about getting a
pager and service whereby I would recieve pages each time NOAA
weather stations in the area sent out a weather alert. I have seen several
companies who speak of this on the web, but I haven't heard about
anything like that in this area. Do local pager providers usually offer a
service like this, and if so how much does it usually cost?
Are some companies better than others? Any help with this would be
greatly appreciated. Thanks.

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. The service manual has an exploded parts diagram which is helpful in showing how to disassemble the scanner.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more

capable 500 mW speaker is available through Tandy as
replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory
bank, then scan only that bank, your PRO-43 will freeze up
and be placed into a catatonic state. Use the procedure
documented in the PRO-43 user manual to fully reset the
scanner. This will "break the trance," but all the memory
channels will be cleared.

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267.

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. You can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226. |

Plectrom SM-series Scanning Receivers |

Plectron also sold an SM series of scanners, manufactured | in Japan by the same folks who made Craig (division of | Pioneer) scanners. The SM series are consumer-grade models | and are included in this article for the sake of | completeness. They are crystal controlled radios and | feature priority scan and a separate trimmer capacitor for | each channel to net the crystals on frequency. |

Band Frequency Limits |
_____ |
VHF-low 30 - 50 |
VHF-high 150 - 174 |
UHF 450 - 470 MHz |

Table 4. Plectron SM Model Band Limits |

Model UHF VHF-high VHF-low |
_____ |
SM-301 X X X |
SM-302 X X |
SM-303 X X |
SM-304 X X |

Table 5. Plectron SM Models |

The crystals used in the SM series are quite different from | the crystals used in the conventional single channel | Plectron monitors. Here are the crystal formulas: |

VHF low band: |
crystal 3rd overtone freq = receive freq + 10.7 MHz |

VHF high band: |
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3 |

UHF band: |
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / |
10 |

Other crystal specifications for the SM series are: |

CR 25/U holder |
3rd overtone |
20 pF load capacitance |
parallel resonant |
max series resistance 40 ohm |
max drive 2 mW |

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 , Bearcat BC-101 , and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to

specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

Hello everyone!

I'm a semi-newbie who is looking to upgrade beyond my lowly BC148XLT. I'd like my next unit to be handheld, and I'm currently considering the BC80 or the sportcat. Should I look for any others? I'll mostly be monitoring police and fire, but I'm interested in listening in to all sorts of things.

I have an aor ar1500 for sale that has 1000 memory channels and 10 search banks .5mhz to 1300mhz all modes including lower and upper sideband. Has manual bfo to tune in ssb signals. Bfo can also be used to descramble motorola analog speech inversion scrambled radio communications as well as scrambled
cordless phones. Whatever the frequency put in am mode and tune in signal with bfo. Radio is handheld and is about the size of a RS pro-43 (maybe a bit
taller) and comes with original case,manual and charger. $275 or trade for related items.

Thanks KE4LEU

> and what does it do as with the LO circuits and what do they do?

PLL = Phase Locked Loop. LO = local oscillator

Not lame at all, but they are two of the basic building blocks of a
receiver. The main stream of a quality receiver consists of:

1. Bandpass filters (preselector)
2. RF Front End (preamplifier)
3. 1st Mixer <---------------------- 19. PLL 1 \
4. 1st IF (Intermediate Frequency Amplifiers) \ 21. CPU
5. IF filter / |
6. 2nd Mixer <---------------------- 20. PLL 2 / 22. Memory
7. 2nd IF
8. IF filter
9. 3rd Mixer <---------------------- 23. LO
10. 3rd IF
11. IF filter 24. Power supply
12. Modulation Detector/Demodulator
13. AGC detector/generator
14. Noise limiting/processing
15. Audio preamplifier
16. Volume Control
17. Audio Power Amplifier
18. Speaker

There's more....and the above may not be consistently in order,
depending on the receiver, but it's good enough for an overview.

In a word, tuning of the scanner is accomplished by the PLL circuits
which are controlled by firmware in the CPU and keystrokes from the
keyboard via the CPU. But really, the CPU does it all. The user is
allowed to control the CPU to some extent.

The PLL's are variable oscillators, held to a precision frequency per "setting" of the tuning mechanism, be it a dial or a display with keystrokes.

Modern receivers use a process called "heterodyning" or simply "mixing" to derive selection, tuning, and amplification of a desired frequency. Here is an illustrative example.

Say you have a wideband front end that snags everything from DC to daylight from the air.....but you want to receive 300.000 MHz to the exclusion of everything else. First step is to design the 1st IF section to accept a certain frequency and reject all others, and yet be tunable or selectable. So let's choose 1500 MHz as the 1st IF frequency. The heterodyning process uses a device called a mixer to "mix" or heterodyne two frequencies. A mixer naturally outputs four freqs from the mixing process:

1. Sum of the two mixed freqs.
2. Difference between the two mixed freqs
3. PLL 1
4. RF Freq from antenna

Soooo, knowing we have everything coming IN...and we want 300 MHz to be an analog of 1500 MHz, we choose a PLL 1 freq of either 1800 MHz or 1200 MHz, because of the Sum/Difference principle. Either of these will permit an output of 1500 MHz from the 1st Mixer. If the 1st IF section is filtered and tuned to 1500 MHz, then nothing else will pass, including the original 300 MHz and the PLL 1 freq. However, any modulation on that desired 300 MHz signal will be passed via the mixer to the 1st intermediate frequency.

From there, we design a 2nd and 3rd IF's, 2nd and 3rd Mixers, and a PLL 2 and a Local Oscillator to more or less repeat the process of the first mixer/IF. each section further amplifies and tunes or enhances the desired signal while rejecting all others (hopefully).

Going back to the 1st Mixer and PLL 1..... if we choose 1800 MHz as PLL 1, this is good because it is out of the passband of the scanner and will not cause interference. So we have the antenna or preselector into the first mixer on one input (1) and PLL 1's 1800 MHz at the other input (2).

Because there is the whole RF spectrum at Mixer Input 1, theoretically there will be a monstrous output of the mixer, but remember, the 1st IF section is tuned to 1500 MHz so everything else will be rejected.

Which means if a 600 MHz signal is mixed with 1800 MHz, the outputs will be 2400 MHz, 1200 MHz, 600 MHz, and 1800 MHz, all four of which will be rejected by the 1st IF. Likewise for 150 MHz input, that produces outputs of 1950 MHz, 1750 MHz, 150 MHz, and 1800 MHz, again all four of which are rejected by the first IF.

The goodie here is when 300 MHz is present, the outputs of the first mixer are: 2100 MHz, 1500 MHz, 300 MHz, and 1800 MHz. Voile! The

1500 MHz component is accepted into the 1st IF, amplified, and fed to the second mixer.

This is where PLL 2 enters the picture and the process is repeated, much like the first. This repetition is necessary because nothing's perfect, including the selectivity of the 1st IF section. So a second section sharpens the tuning, and a 3rd sharpens it even more.

Cheapo, funko, bunko receivers have just two mixers and two IF sections (dual conversion) whereas the better receivers have three (triple conversion).

This explanation does not cover everything and is not complete nor even particularly typical of a scanner......there is a lot more than what I laid on ya....but it will get the idea across.

Final clue here......if we make PLL 1 and PLL 2 "adjustable", we can then "tune" the spectrum for desired signals while rejecting undesired ones. In the example above, we set our tuning indicator to 300 MHz. As we tune up to 600 MHz, then the PLL could be designed to track downwards to 900 MHz so that the sum of the two remains 1500 MHz. Likewise, we could track PLL 1 up to 2100 MHz so the difference would be 1500 MHz.

The principle is to "track" the PLL so that either the sum or the difference of the desired signal and the PLL signal is always equal to the first IF freq (1500 MHz in this example.) Thus, when you "tune" a receiver, you're really adjusting the frequency of the PLL...with the inner knowledge that only one frequency can be accepted into the IF section.

However this is where "image" frequency interference can enter the picture. Suppose again, our IF section is set for 1500 MHz, and a desired signal of 300 MHz from the antenna is injected into the one mixer input. Say we inject 1800 MHz into the other mixer port. The difference is 1500 MHz, which is good. BUT !!!!! Guess what will happen if another signal of 3300 MHz comes in from the antenna at the same time as the desired 300 MHz signal comes in?

1. 1800 MHz - 300 MHz = desired 1500 MHz. Good.
2. 3300 MHz - 1800 MHz = desired 1500 MHz. Ungood.

Meaning that it is possible to "hear" both 300 MHz and 3300 MHz, because each will produce a 1500 MHz output into the 1st IF.

So this is where the "preselector" or bandpass filters come into play. With the proper switching, a bandpass filter of, say 200 MHz - 800 MHz will be "in", which will reject the undesired 3300 MHz before it can get into the 1st Mixer.

The scanner's CPU contains the "smarts" (firmware) to do all this switching automatically.....dependent on the tuned (desired) frequency.

Some Mixer/IF's use "up conversion"; others use "down conversion".
There are benefits and liabilities of each....which makes it an
engineering issue, mostly dependent on the desired specs/cost of the
receiver. Up conversion is usually costlier, but better, since the IF
section can be positioned out of the passband of the receiver to
minimize "birdies" and other interference. There are other
considerations, though, and there are no "pat" answers.

> Sorry for such a basic question. I just don't know.

It *was* a basic question, but zillions of others out there don't
know, either. So don't feel pregnant.......... Basic as it is, this
shit gets kind of hairy, even for the "experts".

Have you tried an ear phone? There are external and in-ear types and
you could even go all out and get an in-ear molded to your individual
ear! Radio Shack has a number of different ones and they even make a
lapel speaker but I would recommend an ear phone for the privacy aspect
if nothing else.

Regards,

Order one from (800) 442-2425 at Tandy National Parts Center. Askfor
the Owner's Manual. But whilst you're at it, ask for the Service
Manual, too. If you know what's good for you.....

> also can the scan range be increased to give me more freqs,

Clip one leg of diode D-44 and spread the cut ends slightly. This
allows reception of the cellular bands. Illegal to monitor, of course.

Although certainly somewhere there are decent lapel-sized external speakers, if you're wanting something that small with good sound why not just go with an earpiece? The best I've ever used is surprisingly cheap and can be bought anywhere walkman headphones are sold. Grab a cheapy set, the ones that fit into the ears, and just cut off the right one off at the fork. Plug it into your scanner's audio out jack and you have great sound that only you can hear. Adjust the way the piece sits in your ear to control "bass" and "treble". Its super-small size also makes it much less noticeable to the naked eye. Hope I helped.

kegan30306@aol.com (KEgan30306) noted:
> ... I can get virtuously NO activity from Atlanta PD.

You'll find precious little virtue following the activities of the
Atlanta government. The Atlanta trunk has recently demonstrated a bias
towards the 866 & 867 MHz frequencies. The current trunk layout is:

856.4625 .4875p (-) inactive
857.4625p .4875- (p) phone patch
858.2375 .4375 .4625- .4875 .7625 .9375
859.2375 .4375 .4625 .4875 .7625- .9375-
860.2375- .4375 .4625 .4875- .7625 .9375
866.0625 .3125 .8625
867.1875 .3125

<snip>

Good answer Wiggie...but...

My OS456Lite cost $99 from Opto and arrived 7 days ago, and
it still gets Cellular running on my Pro2006.

I guess Opto skirts the ECPA by not adding cell capability
to an existing cell-capable receiver.

That said, there's lots of signals out there that are
far more interesting than cell.

Motorola has always published such a message in their CSG products manuals.
Most people don't bother to read. Considering that a 2900 is AMPS/NAMPS, more modern versions are available in TDMA/CDMA, which is secure from analog scanner eavesdropping.

3117. Re: TRUNKTRACKER-misssed feqs?

If the unit actually does need each of the possible talk channels programmed, and knowbody has really said yea or nea yet (a good test for those with), then it probably has to do with getting "just a wee bit close to Motorola's copyright" more than any other reason. System frequencies are, and will be available in many locations. Books, CD FCC data, internet, it simply won't be that hard to get the actual channels. After all, you need to know all the possible control channels for any given system if you are going to acurately follow them, and, if you can find those, all the other freqs will probably be there as well.

Gave my TrunkTracker the acid test in our local intermod alley today, passed with flying colors! I drove through an area that's somewhat shaded from the city government trunking system's towers and rife with intermod from microwave towers operated by Ga. Power, NS RR, BellSouth and both local cellular providers. The 235's performance was superior to my dash-mounted PRO-2026 even though I was just using the stock flexible ant. The 2026 honked and bleated with IM as usual, the 235 was as quiet as a mouse. It's a great little rig except for the cheap plastic case and the low speaker output..perhaps there'll be an aftermarket fix for those two problems.

Not to flame, but if you don't know, it might be better to not give an
answer.

The answer is, in the US, a license is not needed to purchase HAM
equipment.

Press the SEARCH button, to get you in search mode.

Enter the frequency you wish to start searching from, press LIMIT.
Enter the frequency of the upper limit you wish to search to, press
LIMIT again.

Now press SEARCH again, and it will scan BETWEEN the 2 entered
frequencies.

This is a GREAT scanner, hold onto it!

Don't you hate that? I don't hear it on 675 but I hear Brown & Williamson (tobacco co.) on 600. My little PRS-101s don't have CTCSS so I can't even leave them on my licensed channel because of the other traffic. I end up using the interstitals and thats where I noticed a definite lack of FRS traffic. Only an occasional short conversation every two weeks or so from a passing mobile (?) or portable.

I'm just south of Macon in Warner Robins, GA. I can get about 4 miles simplex on the interstitials from my 18' tower at the base and the stubby on the HT. Not bad, but would like more range. BTW, if you have a GMRS repeater book, could you tell me who to contact for Macon, GA? Thanks.

Source record: 195788

I have a good condition PRO-2004 scanner with original box and manual with all the following modifications:

6,400 memory channels

L.E.D. signal strength meter

L.E.D. center tuning indicator

Includes instructions for the added features and how to access the 6,400 channels. The backlight display works nice and bright. The AC power cord is eliminated but I will include a Radio Shack 12 VDC AC/DC adapter that plugs in to the back of the unit. This makes the scanner more transportable.

Price is $275.00 firm plus shipping. C.O.D. is negotiable.

E-mail to Fbals@aol.com
or call (216) 261-5319 anytime

Want to trade BCT-10 portable scanner for hand held. The BCT-10 looks like a radar detector, is **pre-programmed** for all 50 states plus Canada for police, highway patrol, emergency, weather etc. I have all manuals, box, etc.. The unit runs off the cigarette lighter or can be hard wired. Reason for selling... I prefer hand held and listen more at office and home, rather than car.

I would like to trade this unit for a PRO-46 or a partial trade for a PRO-26 or PRO-43. Please e-mail direct with offers.

Thanks!

Hey jdkirby,
What school are you from? Must be a real old school 'cause the police
of the future are "Community Police." This means it involves the whole
community. Just last week, on Monday, a silent hold up alarm sounds at
a local conv. store. with-in 1 1/2 mins. a citizen called-in via cell
phone to relay offenders discrp., along with veh. make, model, color,
and even the tag. They were willing to not-follow the car, but just
keep it in site and kept dispatch advised on every changes along the
way.
About an hour later an officer got out on a prowler call. After
getting on-scene he was advised that it could be the ex-husband of the
caller. But he never replied back to dispatch...suddenly call-takers
interupt to say another citizen called-in to say "...I was listening
when the call came-out and when the officer shut his car door, some
big guy just jumped on him. The officer was hit in the head several
times with his own hand-held radio...Yada, Yada, Yada...

The point is this...
jdkirby does not speak for us...

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/ (WWW).

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com (email), or http://www.perconcorp.com (WWW). The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been recently renamed Beyond Police Call and now includes a limited selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the
| FCC Frequency Retrieval System. FCC data for all states is available,
| covering all services and all frequencies. Current data is for first
| quarter, 1996.

| Scanware has chosen to discontinue developing this software, but the good
| news is that the software and data are now FREE! It is being hosted by
| the West Virginia Educational Network. See:
| http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

Here is table of data fields in the FCC master. Fields provided by various products are indicated by "#" or the field length, if known.

Please do not use MIME/HTML in Usenet posts. It violates Usenet Internet
standards (HTML is a WWW standard only), is rude (to those without
MIME/HTML readers), is unnecessary (since it adds no content), and wastes
a lot of precious Usenet resources (since it more than doubles the amount
of material that has to be transmitted and stored). There is an option in
Netscape to turn it off .. please use it.

3149. PRO-2026 (late) cell mod help

Newsgroup: rec.radio.scanner
Date: 1997-06-01 00:00:00 UTC
From: Joe Roth <jroth@visi.net>
Message-ID: <5mrqh4cca1@madrid.visi.net>
Source record: 195808

I just found out Radio Shack is selling new PRO-2026 mobile scanners on clearance for $99.95 so I got one today. I know the 2026 could be modified for cellular by removing L201. However, I must have a late version of this Uniden board because the jumper does not exist. When inspecting the CPU board, some small foil traces are suspect but I am not certain of the cell mod restoration.

Does anyone have the cell restoration mod for these later scanner boards?

73, Joe, N3ELM.

I do not need to become a member of an orginazation in order to know what
it is about. Anyone with a communications receiver or a computer can find
out about amatuer radio. I know more than enough. Also, my signature does
not advertise ignorance, sloth or indifference, it blantantly states that
I am Proud of not being associated as an amatuer radio operator. I often
wonder why it bothers the Hams so much when I use it. Perhaps they're
searching for the fufillment I get with freebanding, and not all the
stuffy blowhards that they find in their service?
Could it be jealousy??.....we'll soon find out I'm sure.
One last note.....to the fellow(s) who were going to reply that they're
glad that I'm not associated with amatuer radio, I say.....too bad I
beat you to it
Not an Amateur Radio Operator.....and PROUD of it!!!

I had one and loved it, if I remember right it is the Radio Shack version
of the Bearcat 760XLT. Works very similar except you cannot plug a tone
board into it. I did get alot of intermod on mine but it's size made up for
it in a mobile environment.

The listening of "car to car" may or may not be possible. Some system managers will actually assign one or more talk-groups as a "car to car "channel"". If this is the case, then the TT will follow it fina as it is a standard hex/decimal talk group like any of the other fleet assignments.

If you are talking about the "Private Call" feature where a radio can page another radio, and privately carry out a conversation, then it is unlikely that you will be able to listen to these, at least in the trunking mode. A "Private Call" function is just that. It is between only two radios, and even other police may not listen to a private conversation. The central controller randomly selects a talkgroup, unassigned to other uses, and temporarily parks the two radios on it for the "private" conversation. The same is true for telephone interconnect operations.

Here in Columbus, most Private Calls are of little interest to most scanner types. They usually consist of rumor spreading, who is sleeping with who, and other essential police activity. It is not, at present, used as some sort of anti-scanner plan. And, you can still listen to these in conventional mode.

Most systems will have various "sub-fleets" to go to when something is happening and the dispatchers want to clear the main talkgroup. This type of plan will have dedicated talkgroups and will be no problem to monitor on a TTracker. The trick is scanning long enough to catch on to what code these "CMH Lingo "BACK CHANNELS"" are.

Tom

Hey Joe, thanks for posting the information about the TrunkTracker coverage. I find it extremely encouraging that the local media homed in on the open/closed broadcasting issue in some way. Unfortunately, doesn't that mean that the county won't be buying anymore radios which the TrunkTracker can monitor? This was what I was afraid of.

I have a HS200, I want to clear memory and start entering
freqs over again. Anyone know of a keypad trick for this?

Thanks.

Most of the net info on this has been of the nature of how happy the users are with probe, myself included.

>hoping to use it with my Pro 2035 with Optoelectronics interface. I would
>also like to set up an old 286, or 386 computer to run this (and Message >Tracker) so as to leave my 'main' pc free. Has anyone else tried this sort
>of thing?

Yes, this works fine. That is one of its strengths.

I hope that I can so that I can run a couple of programs at once (Message tracker and Probe, or Scanstar), and avoid the limitations of DOS. >

One of the great things about Probe, is its scanning speed. Windows can't handle it.
>If any one has any experience with any of this, and would like to offer >advise or comment to the group in regards to these questions, please post >to group or email me. Thank you very much.

I like my Probe software, I'm sure you won't be dissapointed if you have tried it's competition.

Questions for these pedantic C.O.D. enthusiasts:

Will the driver allow you to open the box for
inspection before you give him/her the funds?
Will the driver wait while you test the unit
before you give him/her the funds?
What recourse exists if you've transferred the
funds and the unit ain't as advertised?

3160. Re: HTX204 on FRS Freq's?

Newsgroup: rec.radio.scanner
Date: 1997-06-01 00:00:00 UTC
From: schlemba@ix.netcom.com
Message-ID: <5ms484$8dk@dfw-ixnews3.ix.netcom.com>
Source record: 195819

NEGATIVE. Remember, a radio must be type accepted to use anywhere outside of amateur freqs. There are some specific rules about FRS (power, antenna, etc) that preclude the HTX-204 or FT-50R or any radio modifiable to that range to be used there.

I hear what you want to do, though. I, also, am the only ham in the family. Look into GMRS for your family. You can get a MAXON base/mobilr from Lentini for $290 and a portable for $180. One license for the whole clan for 5 years. You may be able to work simplex in your area or you can see if there is a GMRS repeater provider in your area. NOTE - Do not buy RS GMRS equipment if you need repeater (half-dux) capability.

Happy Radioing!
Steve S.

Don't you hate that? I don't hear it on 675 but I hear Brown & Williamson (tobacco co.) on 600. My little PRS-101s don't have CTCSS so I can't even leave them on my licensed channel because of the other traffic. I end up using the interstitals and thats where I noticed a definite lack of FRS traffic. Only an occasional short conversation every two weeks or so from a passing mobile (?) or portable.

I'm just south of Macon in Warner Robins, GA. I can get about 4 miles simplex on the interstitials from my 18' tower at the base and the stubby on the HT. Not bad, but would like more range. BTW, if you have a GMRS repeater book, could you tell me who to contact for Macon, GA? Thanks.

Hi Bill,
If this mod is done, will the new 100 bank retain it's own delay,
lockout, etc, settings separate from the original 100bank.

3165. IF Output for BC9000XLT

Newsgroup: rec.radio.scanner
Date: 1997-06-01 00:00:00 UTC
From: blanton@pe.net
Message-ID: <blanton-0106970957290001@10.0.2.15>
Source record: 195824

I would like to add an IF output to by BC9000XLT in order to feed IF signals to my HF receiver. That way I can have all-mode VHF-UHF receive capability comparable to that of the high-end Icom receivers but at far lower cost.

The BC9000XLT circuit card contains really tiny ICs and all resistors and capacitors are of the chip-type. This makes it hard to work with. I tried tuning the radio to a strong station and probing around on the card, first with an oscilloscope and then with the HF receiver isloated by a small capacitor. No luck -- no IF signals. It might have helped if I had known the proper IF frequency. I tried the standard ones: 10.7, 10.8, 21.4, 21.6 and then scanned frequencies between 10 and 14 MHz. No IF signals were found.

If anyone has a schematic or can give me the exact IFs it would be a big help. If I solve this problem I'll post it to the net.

It will pick up car to car calls as long as they occur on an actual talkgroup (which is the way it usually happens). TRS systems have to capablity of allowing officers to "private call" another officer. So they just talk between themselves without disturbing any other user. The TT won't track these.

Tom

Uhh,

Too long to place on one server, but not too long to place
on every server that picks up the post of a TOO LONG binary file.

Please don't do that.

I own a Pro-2037 and enjoy the tripple conversion feature very much. Compared to my Pro-2036 which recieves every image possible on a busy day, I find the 2037 to be a great scanner.

You find a cop's car (with the officer in it) being pushed over a bridge into oncomming traffic below entertainment? I think you are about the sickest S.O.B. since Jeffery Dhamer got what was comming to him.

You'll find that MOST people are basically honest. So the package you receive will
be as advertised. However... there is that small minority of low-life out there that
cheat, steal, whatever as a way of life.

To answer your question, no, the UPS or FEDEX guy won't allow you to examine the contents of a C.O.D. shipment without paying for them first. But see first paragraph.

I'm biased in a way, because I just sold a scanner to a guy in another state last week. Both of us were decent honest guys and the sale went without a hitch. And to really avoid any problems, use Fedex instead of UPS.

What a sad commentary on our society, when guys like this are even
afraid to tune in to cellular frequencies. This guy probably informs
on his family and neighbors to the tax people. You would think we
live in Israel or the Soviet Union. He probably calls police when he
sees someone drop a gum wrapper.

You would make an EXCELLENT government employee, putting your nose in
everyone elses business.

I don't know. I don't have any of the above scanners. However, if the custom per-channel settings are stored in the SRAM like is done in the PRO-2004/5/6 and 2035/2042, then YES! If like a lot of other scanners, where custom settings are stored in the CPU's NVRAM, then no.

Sorry, pal, you're S.O.L. Scanners made or imported after April 1994
cannot be modified for cellular. The late version of the PRO-2026 is
one such. Only the early version that has L201 can be cellular
modified. No if's, and's, or's, or but's.....

Source record: 195890
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello.

I am considering to buy a new HF tranceiver w/6M (+ 2M preferable,
but optional) with a reasonable price. (well... I have to get a morse
code qualification first though. I will try to get a CW qualification
within a month or two... as soon as I finish the school !!)
I am looking around CAN$1500-2000 (US$1100-1500).
The tranceiver must (be):

- All mode TX, All mode RX
- Min. 100W HF + Min. 10W 6M TX
- multi continuous RX
- Antenna Tuner

ie. Kenwood's TS-570S

If there is a used equipment that fits above catagory [must be able to
tune in digital (I am not looking for something that is 10 years old
!!), all mode TX tranceiver], I am willing to pay 50-75% of new
equipment price. I, however, prefer a new one as long as the
warranty is concerned.

Thanks for your help !!!!!

Any help would be appreciated alot! :D
> Robin

Yo Robin for the beer -- its a QUART, for the antenna its a QUARTer
wave.
Just sloshing

Regards
Rod in San Diego.

PS In ham radio, in the 60's, a popular 144 to 146 MHz antenna was ---
yep you guessed it -- A Beer Can Antenna. As I recall, one soldered the
cans together until the proper wave length was achieved, 1/4 wave - 5/8
wave etc. Obviously this was when Ye Olde Beer Cans were "tin" cans not
made of AL as they are today.

> BC760xlt. I'm looking for feedback on the PRO2037.

Here's my $0.02,
Good keypad with regards to spacing and tactile feel
Display has good contrast and backlight; viewing best from
above and to the side holds up well
Audio is loud and crisp; mid-range suffers a little
VHF sensitivity : very good
UHF sensitivity : good
800 sensitivity : fair to good
AM : good sensitivity and quieting
Birdies are few and images are not too bad
Intermod is quite rampant when used with an external
antenna; I have problems with a single TV station on no
less than 23 frequencies; front-end filtering is weak
(if non-existent ;-) which is similar to the BC760 so
you should be familiar to it
Squelch tail is very short even when set at its tightest
setting
A good bargain when bought at its sale price of $200

Happy monitoring!

Strong signals,

This is absolutely true! I have discovered some users of the system I
am monitoring relying heavily on Private Call (unit-to-unit)
communications, thus rendering the TrunkTracker a lot less useful than
anticipated. Also finding a fair number of Private Calls between the
field unit and the dispatch console.

It really depends on the scanner. I know that you can buy some versions of Uniden Scanners (That are really expensive) that can take an accessory CTCSS tone board. That board will "trip" the scanner. (Of course, that CTCSS board costs a pretty penny, too.

Its a male ego thing. each person feels that they know more that the other guy and by god, they want them to know it! From my perspective there are about 8 different people on here that know what the hell they are talking about and the rest are newbies that want to learn. Look into any newsgroup and you will see the same shit. Just a bunch of idiots with a computer and a opinion. It will never change.

My suggestion to the new readers and scanner users is to use you own judgment to sort out the bullshit from the good information and ignore the dumb asses who love to flame. Its to easy to get caught up in a flame war and it is not worth it. There are several good pages out there that give you most of the information you need.

'
WRONG! And what makes you think the US GOVT
is going to go after the criminal who gyped
you out of 39.95 for a product that was not
as advertised.

The FEDS will go after their neighbors dog for
pissing on their wife's petunias before the FEDS
will lift their collective leg to help you. They
don't exist to work: they exist to exist.

`` Who told you this? THE FEDS...sounds ominous.
Is this an idea for a PILOT movie or what?

You have got to read your post while standing
in front of a mirror and realize that the FEDS
are not behind you.

This is good subject matter for a JOKE. Or
JOKES. That is reality.

The US Mail allows you to inspect it. That
is about it. UPS and FED Ex and the other
two or three don't.

THE FEDS WILL GET THEM...Now the answer is known: the CIA don't do much these days, so I guess ol BILLY will tell old Janet to put them to work. Finally.

laughter heard as this post is sent......

bill conduit
etc.

3205. ATTN: Scanner Collectors

From: Tom Montgomery <monty55@ix.netcom.com>
Message-ID: <33920188.7AFA@ix.netcom.com>
Source record: 195914

For Sale:

Vintage Sears 4 channel VHF -Hi (150-170 mhz)handheld scanner in
excellent condition.
Includes:
Original Box (slightly worn but in good shape, with all flaps)
Original Instructions
Original AC Adapter
Original Case
Original Cigarette Lighter Adapter
Original Telescoping Antenna
Original Coil Loaded Flexible Rubber Duck
Nickel Cadmium Battery Pack (minus Ni-Cads)
4 crystals (154.4, 155.35, 155.01, 155,085)

First $30.00+ Shipping If you live in the SF Bay Area I will meet you
half way.

Crystals are P-77 type and can be ordered from Radio Shack for 4.99 a
piece. Also has 1st channel lockout if you want to put a weather station
crystal in it.

This unit is in great condition and would make a great addition to your
collection. It works fine on both battery, AC wall adapter, and car
adapter. All you would need to do is order crystals from R.S for your
favorites. I believe this unit was made for Sears by Regency.

>
> regards from col.

If you can find someone to translate from the spanish
version you can find it at:

http://support.tandy.com/support_electronics/28535.html

To find some information on each of many Radio Shack scanners,
start at:

http://support.tandy.com/

Select the first "Product Documents" button (Consumer Products)
then select "Communications" then "Scanners" then the model
number.

Since you want to call people names, idiot, you might want to check up on messages you respond to. The one you answered is about 7-10 days old,
and was settled long before YOU came along. The original poster stated NOTHING about disabling the radios, which he did in the very next post, correcting the problem.

Then, along comes you....

Dhamer got what was comming to him.
> > --

I have no problem with hearing how an Officer was killed and the scumbags that did it. What I do find wrong is using that information for entertainment purposes. How this type of information could entertain someone I do not know. If I want entertainment I'll sit down and watch an episode of Cops where they toss some no good looser arround and then haul him off to jail. Hearing about an Officer's death is nothing more than upsetting to me and as much to thier families. As for kissing your ass, I think you'd have to remove your head from your posterior first.

To look up the part on the webpage, you would look under D1,D2,D3,D4 or D5.
These are surface mount which are either MA110 (marked 1A) or 1SS352 (marked
C1). So you might be able to pick them up at alternate places instead of at
Radio Shack. I apologize for not including this on the original post.

If you were planning to use it for the SW mod then you can use a 1N4148 diode for that. It actually works better. You can also use the same type of diode to open up the 54-108Mhz (cant remember right off the top of my head). You can also order the part from Radio Shack. Go to http://support.tandy.com and find the detailed part listings for the Pro-43. Get the RSU#(Radio Shack Unlimited) and call 1-800-THE-SHACK to order the part. I will tell you right now that the diode is very small and is going to be a lot less than the postage to ship it. Place the diode in same orientation as the other diodes in the matrix. I would probably buy a keytop(rubber keypad) for approximately $5.95 to keep on hand along with maybe the BNC connector. These wear out after a several years of normal use and even though you can use LOCTITE REAR WINDOW DEFOGGER KIT to repair the conductive pads, the Loctite usually runs $8-10.

I have both and they are great. Full featured and user friendly. You just need to decide if base or handheld is important to you. If you don't need the handheld, the 9000 is the best bet.

Here in the Washington, D.C. area they have been booming in on and off
during the daylight hours, especially late morning hours.

I'm not sure, but I *think* that South Carolina state police
were in there underneath them. That's the main reason that I punched
in those frequencies in the first place. I wasn't sure that I would even
hear S.C., but it was worth a try for the hell of it.

They're in the middle of it all, so everyone in the proper radius
around them hears them.

Speaking of 33 MC, I heard Pasco County, Florida fire on 33.94 several
mornings this past week, so things are definitely heating up!

I have compiled a list of talkgroups for some systems near me,
but I stopped just beyond the point where I found things of interest
to fire or police scanner buffs. In my opinion, few people would
regularly listen to trash truck operators, public works employees,
and other such necessary but otherwise uninteresting services on
a government trunking system.

If you all intend to document every last talkgroup, then, yes, you
really *do* have a huge task ahead of you. For one thing, considering
police alone you would have to wait for some major or unusual
event in order for them even to use some obscure group, but that
would end up being a real find. Once you had such a gem, it might
come in handy in the future, but you first need to know of its
existence. All the other mundane talkgroups are mostly just
time consuming to document.

> this one stretch of Inter-mod interstate.

Don't be too quick to praise the radio. After all, the radio only
switches
to a voice channel upon command from the base station controller. If
the TrunkTracker is getting blown away by intermod and other repeaters,
then it won't *hear* the control channel and you won't hear anything,
no noise, no talk, no nothing. Of course, if you drive through downtown
to the serenade of radio chatter, then that *is* nice. The 800 MC band
seems to be more orderly in its allocations and less problematic in this
regard; I don't know why this is so.

Are you kidding me??!!

So, if you can't fit or don't know all of the system's frequencies
then you are out of luck for those? That pretty much stinks!

The bloody control channel tells the radio what frequency to use for a
particular talkgroup, so why would the scanner need to have it
programmed in
ahead of time? That defeats the purpose of having the scanner if you
have to do
all of the work for it.

Have I got it wrong?

I forgot to mention this in my other post, but since it really belongs
in a seperate thread anyway...

Has anybody heard anything definite (non-speculative) about Motorola's
position on this? I mean, if we start putting up files and Web pages
with talkgroup listings, will there be hell to pay? Will we have
batwings emblazoned on our foreheads like the Scarlet Letter?

Inquiring minds...

> pasture ...

Unless the TrunkTracker is not designed the way I think it must be,
the scanner's limitation is 30 talkgroups, not 30 frequencies, when
discussing monitoring a trunking system. The control channel tells
the radio what frequency to switch to, so the radio *should* not care
less how many frequencies (or r.f. channels) exist in a particular
system.
The scanner should simply obey orders and go to the correct channel
assigned by the controller and do the Right Thing.

So, the only thing you should really need are the control frequencies.

If the fire department and police and whoever else you wish to hear
have more than 30 talkgroups between them, you would have to split
them up among different banks, but at least you would be able to
hear all those talkgroups. There's nothing that says you can't
consume more than one bank with the same system, after all.
(At least, I hope there isn't!)

If you simply post the Uniden Codes, you are not actually posting Motorola's Hex talkgroup code. Even if you were, a hex number does not belong to them. The people who will or will not be on the hot seat, for the beginning will be Uniden. A source tells me that Motorola's Proprietary Security gang received their TTracker last Thursday. Let the disection begin. Hope mine comes soon.

About using CB antennas on a 2-M rig; there is a 2-M strip-line
filter in the ARRL Handbook that I made one of, and it matches
2-M to CB antennas like crazy!

A foot of 1/2" copper tube and a var cap and a couple 50-ohm
connectors and a 2" X 2" X 14" box, and a bit of patience is all it
took.

Try it, you'll like it.

Hi folks:

I have a 40-channel Cobra 18-Ultra CB radio in my car that I use every now and then on the interstate. It has an LED-type signal meter. Periodically, when I'm very close to another unit (trucker right next to me) the signal seems to overmodulate. The meter pegs all the way to the top and *stays* there, unless I key the mike to release it. It does not receive any further signal, or rather does not amplify that signal through the speaker for me to hear once it has pegged. It will stay that way indefinitely until I either key the mike or turn the unit off and then on again. That has become somewhat annoying, defeats the purpose of being able to listen to the chatter when I want to...and for all I know may be causing some damage to the radio.

Why does this happen, and is there anything I can do to correct it?

Thanks! - Dave

curtains, and tonneau cover. Gold trim instruments.

COBRA 18-ULTRA CB ---- 40 channel, pushbutton tuning, with 3
NOAA weather channels. Includes microphone, but no mounting
hardware. $ 39.

LEXMARK/IBM PORTABLE PRINTER 5183 ---- powered by rechargable
battery or AC wall adaptor (included), this printer is only
11.5" x 3.5" x 2", and weighs about 2.5 pounds with battery
in place. Using silent thermal print head, it will print on
either thermal fax paper or on regular paper using the enclosed
thermal transfer ribbons. Very quiet in operation, and because
it runs on a battery, it is completely portable, for use with
laptop computers anywhere. Includes parallel port cable. $89.
.
ANADEX WORD-SCRIBE PRINTER ---- heavy duty dot matrix printer.
Multiple ports, but no literature so only parallel port in use
now. Tractor or friction feed. Fast, good quality; 17-inch
platten. $ 15
.
add shipping to all prices.
if interested, leave e-mail...

Removal of the code requirement is the only way to go. The hobby has
been nearly killed by this requirement. But the dudes with the FCC's
ear are not even reading this thread. They were the only dudes with
the ties and jackets at the HamVention in Dayton last month, the ARRL
mafia. Do they have an internet connection yet? Do they really care
about the future of the hobby, or just protecting it from dangerous
computer types? Or horror of horror's CB-ers? The hobby continues to
gray, interest continues to be drawn away by the internet and computer
to computer communications. The code requirement should simply be
dropped,, no band plan for CW no requirement, any geeser that wants to
use it (or computer hacker with his computer as the key) can talk to
anyother user if they want to. .. the clock is ticking on the frequency
allocations .. do it now!

3239. How long before "TrunkTracker" is defeated ??

I hate to be a party-pooper or wet-blanket, guys but.....

How long will it be until some small/large changes are made to the systems that "TrunkTracker" 'decodes' in such a way to mess-up the operation of the TT unit ?? (It will only be a matter of time...)

Also, products/devices of this sort will only speed-up the move to 'all-digital' trunked systems... (which will be *much* more difficult to crack/track [but notice I did not use the word 'impossible'...] 8-)

Regards..

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.
Our club president is Bill Bass W4LFC ph# 770-493-8438,his email
address is BillW4LFC@juno.com ,our vice-president is John Talipsky,Jr
KA4VQH ph#770-925-7110 his email address is johnka4vqh@juno.com ,our

club Secretary is Penn McClatchey K4PE ph#404-605-0742 his email is pmm@saf.com our Treasurer is Charles Golsen N4TZM ph#404-252-3303 his email address is cgolsen@atlanta.com ,our clubs activities manager is myself Richard Dean Young KR4IU ph#404-622-8433 my email address is rychard@atl.mindspring.com ,the opinions expressed are my own and are probably bias due to my love of the radio hobbies.
Hope to see you at the hamfest soon.

3245. MOTO AND THE TTRACKER

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <3392DBEB.6AE9@worldnet.att.net>
Source record: 195604

There has been a lot of discussion regarding the number of "channels/frequencies" in a Motorola Trunked system and the 30 channel limitation on the TTRacker. First, Motorola Smartnet Systems are limited, by controller design to no more than 28 channels. So when discussing a Trunk System license, no more than 28 channels, control channel included, are operated from any single data/control channel, the thing your TTracker is monitoring. If some one licenses50 channels, up to and only 28 of those frequencies can be assigned to any specific system (control channel).

Now for Smartzone. The same thing is also true in a smartzone system. The differance is that the Smartzone operation is actually made up of more than one "cell" of channels, each assigned their own control channel. Think of a smartzone system as 6 seperate trunk systems , each with its own control channel, and associated talk channels (up to 28). In a smartzone system, the big difference is that the individiual controllers are all tied together. However, as long as you are locked into your nearest control channel, you will hear the activity from the other systems as well, PROVIDED, AND THIS IS THE BIG IF, a roaming unit from a distant zone has logged into your system.

With Smartzone systems, depending on how the manager sets it up, generally, a discussion on a distant zone system will not activate another zones system unless someone from the distant zone is in your area. The radio logs into the local system saying something like "Hey, im from Podunk, my unit number is 1, and I am listening to the the Podunk Swat 4 talkgroup." "Now, if someone in Podunk, on the SWAT 4 Talkgroup should talk, could you kindly assign me a channel here on your nice system so that I might listen and respond."
The controller says, NO PROBLEM!

In fact, from time to time, the controller is even nice enough to ask "Hey Podunk 1, you still here?" And as long as Podunk one keeps responding, wonder of wonders, you get to listen to podunks swat channel. This of course, if you have the code programmed and all of your local channels in the scanner.

What people are seeing from license data is a multitude of other use channels not associated with any trunk system. These may be MDT Data channels, conventional mutual aid channels, etc. The real key is that for any given trunk system, only one data channel will be operating at a time, controlling no more than 27 other frequencies, at your system. Besides, if you had two data channels programmed in one bank, the radio would only lock on one anyway, and you need to be sure that the one you are locked on is matched with all the other voice channels you have

programmed.

In other systems, there may be 5 "cells" of up to 28 channels that are all on the same 28 channels. This is a simulcast, receiver voting, smartnet system. This is no big deal as the control channel selected for the day is on the same channel at each of the sites. So no matter where you are, you listen to the same control channel and monitor the same 27 other freqs. In this type of system, if someone in the NW part of the county talks to the NW site, and the controller assigns channel 3 to talk on, then the other 5 sites around the county all go to the same channel 3, and the controll channel at the other sites pass the message. The differance between this type and a Smartzone type is that as mobiles roam from one are to another, no logging on and off with various sites is required. BUT, this is not as efficient for a loaded system in that a site 50 miles from where the activity is is being used just a heavy as the one in downton New York City. Therefor the number of mobile and portable radios needed to saturate the system is smaller than on a smartzone system.

Smartzone, 2 or more independent trunksystems with x amount of channels and a control channel for each system, then tied together with other systems. Plain Smartnet, one control channel for up to 27 talk channels.

And, by the way, any specific system, whether Smartzone or simple smartnet, rotates through 4 of the systems channels for its data channel. Usually, every 24 hours, the control channel will change to another of the 28 possible freqs, and what was a voice channel yesterday becomes a data channel today. That is why it is imperative to have all of the associated channel in the TTracker. When you turn it on, it will always scan through the channels looking for which has the secret data. And if you happen to have a channel in the bank that is really assigned to another system, and tommorrow that channel becomes the control channel for the other system, you got a problem. It would be a good idea to listen, conventionally to each of your channels to determine if they are in fact associated with your system.

Have fun, and let the tracking begin.

Tom

This is the $24000 (or 240 Million dollar for Moto) question. Presently, Moto has a TTracker in Proprietary Security being disected. But Moto has a problem. Maybe they will be able to discover that enough copyright was infringed so as to file a lawsuit, stop production, AND, even demand the return of already sold TTrackers. It HAS ALREADY happened in other Moto copyright infringement cases.

But, lets say that Moto lawyers decide they have no case. Then the question is sent to Ft Lauderdale "Can we alter our existing Data Streams of our controllers without affecting the Moto two ways in use?" It may be possible that a very simple data stream change could render the existing TTrackers program useless, BUT, more than likely, any change in Motos data stream would also lend all 24 gillion radios inop, at least until they could be flashed or reprogrammed. An awful lot of effort for an unsecure system anyway.

You mention Astro digital systems. This is where, in my humble opinion, we have Moto by the balls. Moto salesmen have been touting the analog Trunk systems as absolutely secure from monitoring. We al know that this is horseshit, but mayor and city councilmen are usually idiots and never ask the experts before buying their $400 dollar hammers.

Now after pretty much selling all the analog systems they can, along comes Uniden. Is this all bad says the out of work Moto salesman. Maybe not, because this saleman now gets to go back to all his stupid mayors and councilmen and say "Darn them Uniden hackers, they just made your previously, totally secure trunk system, into Newt Gingrich's worst nightmare. We really tried to keep it from happening but them liberal folks in government just wouldn't let us do anything about it. BUT, we have a solution, for just a few gillion dollars, we can upgrade your 3 year old system into a 21st century Astro digital system, and once again, all will be well." And of course Moto shareholders and these salesmen can rejoice because they can "get their kids the GI Joe doll with the Kung Fu grip."

This is the quandry for Moto at this time. They are kind of in a win/win situation regardless of the choice, but one makes them a lot more money. Which would you choose?

Tom

:
:Can someone post a list of cell phone tower output freqs? I believe if I
:tune my scanner to those, signal should be stronger than that of the cell
:phone itself.
:
:Ideally, please post the cell phone tower input and output freqs.
:
:Thanks!

Cell tower transmit frequencies are all in the range of 870 to 890 Mhz.
Cell phone tower receive frequencies are in the range of 825 to 845 Mhz.
Both use 30 Khz spacing and tx and rx for a given call are 45 Mhz apart.

So, restrict your searching to 870 to 890 Mhz and you will always hear
the tower tx. You may hear a few other types of tx in that range as
some unused channel frequencies in the tower tx range are allocated to
fixed services.

Sometimes you hear both ends of the converation and sometimes only
one end. That has nothing to do with your scanner. When you do hear
both ends you can expect that the cellphone user will be at a lower
level than the other end.

870 to 880 Mhz is PAMTSA. 880 to 890 is PAMTSB.

Transmissions are FM (Digital uses a completly seperate
frequency range).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (825-845) and are sometimes repeated by the base.

> Recommendations?

TAPR has a mailing list you need to get on, check the web site at
www.tapr.org I'm using the KPC-3 (with a slight mod, see
http://www.cedar.net/users/dvanhorn/hamrad) and the MFJ
Dataradio in the mobile rig, with a DF Jr and Garmin GPS-40
This is a full-time system for direction finding.

The home system is an old MFJ TNC-2, with a Kenwood HT.

I'm probably going to change the mobile over to the PacComm
Pico-Packet, and put the KPC-3 in here, and retire the TNC-2 to
digipeater service.

There is a current issue with APRS (the dos version) and the
pico, but I wouldn't worry.

APRS works well with most any TNC, the authors are very good
about straightning out any bugs.

Interesting! I'd not considered this before, but there's no reason it
wouldn't
work! You basically have a nice tuneable wideband preselector.. Since it
has to be wide enough to pass WBFM, it will of course pass SSB, CW
and anything else short of high speed data or video...

Go for it!

Possible problems:
Wrong impedance, loading the IF outputs.. (Buffer amp?)
I'd add DC isolation on both the ground and signal leads,
just in case.

As for your claim of " Absolutely _NO_ intermod in
this one stretch of Inter-mod interstate."

I'd explain it the following way. When monitoring the control
channel audio is muted. If your radio will and most likely does
suffer from Intermod the reason you are not hearing it is because you
scanner will not un mute until it decodes valid talk groups and sends
the radio to that channel assignment. Only then will the scanner
unmute but not unless it decodes low speed hand shaking. (similar to a
pl tone and is present while channel is active. Loss of LS hand shake
causes the radio to jump back to the control channel and wait for
another channel assignment. All this time the receiver remains muted
giving you the impression you are not suffering from intermod!!

Try and plug in a 800 mhz manually and see for yourself.

The scanners front end is only double conversion and like most double
conversion receivers it has a difficult time dealing with strong
signals.

3262. Benefit police by monitoring

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: jamoran@mail.goodnet.com
Message-ID: <5mtubv$12ns$3@news.goodnet.com>
Source record: 195621
Cross-posted to: rec.radio.scanner,alt.radio.scanner

hey,
I was on the freeway monitoring the local highwy patrol frequencies and also local fire frequencies. I passed a crash that just occoured. About two miles from the crash was a Highway Patrol officer working construction detail. I stopped and told this officer about the crash. I mentioned that I had beem monitoring both the Highway patrol and the Fire frequencies on the scanner. I Hadn't heard any mention of the crash yet. The officer went to his radio, called in the crash then went to assist until one of the regular patrol units arrived.

Also, Last April, i went outside to get some citrus for Breakfast. I live in a rural area in the county. I noticed two city police walking along an irrigation canal with a police dog..Unusual since We ahve to call the Sherif fif we need police.. My dogs were also barking loudly. A police helicopter was also circling the area. I went inside and turned on the scanner...I finally heard the chopper direct the officers to one of my citrus trees...not frar from where I got the oranges and grapefruit from...A car theft and murder suspect was attempting to hide in the citrus trees but was picked up by the chopper and his IR scope! later, our house was visited by detectives looking for evidence that the suspect might have left behind.

3263. AOR-2500 for weather fax?

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: mattd@congruent.XXX
Message-ID: <3392fa44.359473916@newshost>
Source record: 195622

I am just about to set up a weather fax receiver system and have an A0R-2500. How suitable is this for Wefax? I understand it garners a low regard among the scanning community, and I guess the coarse frequency stepping is going to make reception difficult.
I live in an apartment building but have fitted an external antenna, and the reception is not as good as I was expecting. I was thinking about buying an HF receiver. Can I expect better reception? I would like to have one with computer control. Can anyone make recommendations?
Thanks

Darryl,
Try this : SCAN BANK PROG # LIMIT_AUX # ENT

Substitute the # above for the bank numbers to be scanned.

And do yourself a favor, go to http://www.designeq.com/
and get Howard Bornstein's Guide to the AR1000 to get the
full use out of your AR1000.
Good luck!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

New Scanner Users FAQ

Rich Wells N2MCA

In light of the repititious nature of newsgroup activity and the abusive replies that sometime follow, I took it upon myself to create this "FAQ" to help cut-down on unnecessary activity. I am not Big Brother...nor am I attempting to regulate control or moderate these newsgroups. It is simply another way for me to help add enjoyment to our hobby.

If it is received positively, I will make every attempt to post it on a regular and timely basis to ensure all beginners have a fair opportunity to see it and make use of it.

This document is encoded in HTML format to make it easier for me to maintain it as a web page as well as post to the newgroups. The web page version of this document is located at
http://www.qsl.net/n2mca/NEW_USER.HTM

This document consists of the following sections

* Look Before You Post

* Don't Ask What The Best Scanner Is

* Scanner Models

* What's Illegal

* Cellular-capable Scanners

* Scanner Dealers FAQ

* Trunked Radio Systems

* Magazines & Newsletters

* Ni-cad battery tips

* My Web Page

* Courtesy

Look Before You Post

If you hang around the newsgroups for any length of time, you're bound to see the same questions asked repeatedly. Even the stauchest supporters of the hobby get tired of answering the same questions over and over

again. Those of lesser maturity will even assault you with less than civil verbage.

My advice is to do your homework first. Follow the newsgroup to see what is going on. See what the recent developments are. Get a pulse for what is happening in the hobby and the industry overall.

The probability is that someone else has asked the same thing you did in the not so distant past on the very same newsgroup. Start by pointing to http://www.dejanews.com/ with your web browser. This very nice service allows you to search the recent newsgroup archives. Simply type in what you are looking for and see what shows up. The more recent postings show up first with the original poster and the subject header listed. Be sure to try word variations(e.g. if searching for postings on the Radio Shack Pro-60 scanner, try "Pro-60" "Pro60", "Pro 60", etc.)

Looking for more information on a radio or accessory? There are tons of web sites out there with lots of information for free! Start by pointing to http://www.yahoo.com/ with your web browser. This is just one of many web search services allowing you to locate web pages containing items of your specification. As mentioned earlier, when performing a search try using variations to maximize your chances of finding what it is you are looking for.

Don't Ask What The Best Scanner Is

Almost once a week, someone will post a message that says something like "Which scanner should I buy" or "I want the best scanner there is" Well, well. That's a lot like asking "I want the best car". What does that mean". Best as in cheapest? Best as in gas mileage? Best as in fastest? Best as in crash protection? Ask ten people and you'll probably get ten answers. Having done this, they are no closer to an answer than they were before.

And it's amazing how many are surprised when they get responses that list appropriate radios and find out they usually cost $500 - $700! This only goes to show that they had no idea what they were getting into and had done no research on their own. To all these people, I would like to offer up some fine deals on real estate in central Florida.

After using DejaNews to keep up with recent developments and which radios are well-liked and which aren't, and Yahoo to look up manufacturer specifications on radios of interest, you're probably ready to post to the newsgroup to get details from the people who have actually purchased and used them.

Tell everyone what it is exactly that you are looking for. Give specific details and features. Tell what price range you are looking in. List the radios you have been researching. List the pros and cons from your "uneducated" point of view.

You'll get many replies from people who will give you their point of view. Try not to take any one person's answer as gospel. Be wary of those

who proclaim "stay away from Acme Scanners...they're all crap" etc. You should be able to get a feel for the true nature of a radio...whether it's a good one, mediocre or a real dog. Some responses may even list other radios you might want to consider.

Scanner Models

An important FAQ written and maintained by the author lists a large number of scanners both past and present. You'll find a listing of manufacturers and their current models, along with specifications and inside tips.

Here's a link to the
Scanner Models FAQ.

For a quick reference to today's manufacturers and their models, take a look at my
Manufacturer's page.

To get a look at the hottest selling radios, take a look at my
Hottest radios page.

What's Illegal

This section, for now, pertains to laws governing radio monitoring in the United States. If anyone would like to send me laws which are pertinent to other countries and think they would prove benefecial to others, please send them to me.

In its simplest form, US Federal laws(Communications Act of 1934, Electronic Communications Privacy Act of 1986, Telecommunications Disclosure & Dispute Resolution Act of 1992, Digital Telephony Bill of 1994) make it illegal to :

* Repeat what you hear to anyone but the transmitter or intended receiver of the transmission

* Use what you hear to aid in the commission of a crime

* Use what you hear for personal gain

* Listen to transmissions relating to the following services

* cellular phones

* cordless phones

* public land mobile systems

* paging services

* satellite/microwave/studio-to-transmitter links

* broadcast point-to-point relays.

Recent developments in the Gingrich fiasco have also prompted Congress to revise its interpretation of certain laws. They now claim that it is illegal, and thereby punishable, for any person or company to alter a radio so that it may receive cellular frequencies.

There may also be state or local laws which you should make yourself aware of. Most pertain to usage of a scanner outside of your home(some locales make it illegal to use in public or in a vehicle of any sort.) Here's a link to
Todd Sherman's informative site
that gives you the low-down on state and mobile monitoring restrictions.

Cellular-capable Scanners

This section pertains to laws governing radio monitoring in the United States.

Provisions to the above mentioned laws make it illegal to produce or import for the purpose of sale, radios which are able, or can be easily modified to pick up cellular phone communications.

Therefore, after April of 1994, no new scanner for sale in the US is capable of receiving cellular phone communications. The only way to find a scanner capable of receiving cellular frequencies is to buy one made before this date which has or can be modified, or to import one from a dealer in Canada Europe or China/Japan. If you choose to import, you do face the risk that US Customs will detect said radio and they do have "legal authority" to confiscate it without reimbursing you for said loss.

One minor exception to this was the AOR AR8000 which can have its frequency bandplan modified via PC software. The US versions come with a bandplan that blocks the cellular frequencies. Simply downloading a bandplan without this block restores this range of frequencies.

Developments with the Gingrich fiasco however, have prompted the FCC to revoke the AR8000's certification meaning that it can no longer be imported for sale in the US. AOR is working to redesign the AR8000 so that it can gain FCC certification and resume selling it in the US.

So in short...don't bother asking which radios can receive cellular or can be modified to do so. There are no hardware or software tricks to easily modify US radios. Period! Buy a used one which can be modified or take your chances and import one.

Magazines & Newsletters

This section, for now, pertains to the United States. If anyone has information they would like to provide for other countries, please send me the details.

There are a number of periodicals which exist that can help keep you up to date on the latest activities in scanning and radio monitoring. Listed in no particular order are

* Monitoring Times

* Popular Communications

* The Scanner Club

* National Scanning(Bearcat Radio Club)

Unfortunately, due to hard times, RCMA and US Scanner News are no longer with us. Word has it that there is a newly formed newsletter titled USA Scanning.

There are also a large number of regional clubs that hold meetings and exist to swap information and frequencies all to increase the enjoyment of the hobby! Check out a recent copy of Police Call at your neareset Radio Shack to find out more.

Scanner Dealers FAQ

Another FAQ written by yours truly lists a large number of dealers who carry scanners, communications receivers, HF gear, books, accessories, you name it! There are addresses, phone numbers and web pages listed.

This is a great way to find out what's on the market along with pretty specs and pictures of all the hottest radios. And when you're ready to buy, all the information you need is right here. And using mail order, you can expect to save 10% to 20% over what you'd pay in your area.

Click
here
to take a look.

Trunked Radio Systems

To put it simply, Trunking is a term that refers to a multi-frequency, computer-controlled radio system. At any one time, one of the frequencies in the system is used to continuously broadcast digital data that is used to control the portable radios in the field. This frequency is referred to as the data channel. The remaining channels are used for voice and other traffic. There can be as few as 5 or as many as 29 channels in the system.

Since the system is computer-controlled, it can select the frequency that is used for each transmission without burdening the radio user with having to select a physical frequency to transmit on. Due to this mode of operation it is possible to have a single conversation take place on several different frequencies. Each time the radio transmitter button is pressed, the computer selects an empty channel and uses the data channel to tell the radio which physical frequency to use. Using a conventional scanner, you can see how this form of "frequency hopping" can make very busy systems nearly impossible to monitor.

More and more public safety systems are moving to 800MHz trunked systems. The ideal case for monitoring such a system would be to buy a Uniden TrunkTracker which is specifically designed to follow 800MHz trunked systems by monitoring the data channel allowing it to receive on the directed frequency thereby allowing you to follow entire conversations.

However, if you only have a conventional scanner there are some tips you can use to monitor trunked systems more efficiently. First off, you'll need to program the radio with all the frequencies for the trunked system you want to listen to. Only program the frequencies that are over 850MHz (the ones below this are the low-power splits used by the handhelds which you would need to be very close to to hear). Program the frequencies from highest to lowest and if your scanner has a delay capability, make sure that it is off or turned off for each programmed channel. You'll next need to find the data channel and lock it out since it is of no use to us since it is digital computer data. You'll probably find that there are multiple frequencies used for the data channel and that they rotate around at preset times during the day. When the data channel does switch to another frequency simply lock out the new frequency and unlock the old. When monitoring an important conversation, be ready to press the Scan button. Should the computer switch the conversation to another frequency(usually as radios are keyed and unkeyed for transmitting), you might have to skip over several other active frequencies to find the new frequency.

There are several different manufacturers of trunked radio systems but the worst are probably made by Ericson and GE, from a scanner listener's point of view that is. To discourage listeners from monitoring their systems, the designers added an obnoxious set of noises each time the transmitter is unkeyed. While these noises are being sent out, the computer is switching the conversation to another channel while your scanner is left listening to these noises. If you don't act quick enough, you'll miss the reply on the new frequency. Over the long term, this is suppossed to frustrate you and discourage you from listening in since it is such a hassle. Luckily for us, there exists today a piece of hardware that can be installed in some scanners which allows it to detect the unkeyed transmitter. This detection allows the scanner to resume scanning for you thereby ignoring the noises and helping you to locate the frequency that the conversation moved to.

Ni-cad battery tips

Rechargable, or ni-cad(Nickel-Cadmium) batteries can be a great way to save lots of money if you use your scanner a lot. While they cost much more for the initial investment, they can typically be charged hundreds of times if properly cared for allowing you to save money in the long run.

On some radios, like those by Uniden, you are pretty much stuck with using a ni-cad. On other radios, it is an option allowing you to choose between standard alkalines or equivalent ni-cads. While they can save you money, they must be cared for properly to extend their lifetime thereby allowing you to reap the savings.

Following a few simple guidelines will help you to get the most life out of your ni-cad batteries.

* New ni-cads should be charged to their full potential as soon as they are purchased

* Try to follow the manufacturers guidelines for charging. Most ni-cads will state that they should be charged with so many

milliamps for a specific amount of time. There is usually a slow rate(low current, longer time) and fast rate(high current, shorter time) recommended.

* Unless a ni-cad has been specifically designed to charge at a high rate(large current), and most of them are not, providing excessive current to charge the battery quicker can shorten its life by half as much or more.

* Over and under charging can shorten their lifespan. Allow it the specified time to charge up to full capacity but don't let it set there for long periods of time. Over charging results in excess heating of the battery which shortnes its lifespan.

* Buy a dedicated battery charger with a good charging rate. Look for chargers in the 40mA - 70mA range. If the charger does not supply the exact recommended current, a little simple math will give you the proper charge time. If the recommended current is 50mA for 12 hours but your charger puts out 60mA, you'll simply need to charge the batteries for 10 hours(50 X 12 / 60 = 10).

* If at all possible, do not charge the batteries inside of the radio. Most radios tend to charge with excessive current which will shorten their life. And there is usually no method to detect when the battery is fully charged so that the charging current can be shut off. When ni-cads are inside the radio, it is too easy to forget about them which means they will likely be overcharged.

* The shelf life for a typical ni-cad is only about a month or two if it is in good shape. The energy within a ni-cad dissapates rapidly. If you let a ni-cad sit at a low voltage for too long, you run the risk of reversing its polarity at which point it is no longer usable and must be replaced.

* About every month or so, deep cycle your ni-cads. What you want to do is to discharge the battery to a low voltage then charge it up completely. Try to do this two or three times over the span of a couple days. To discharge the batteries, run them in a radio until it shuts off or purchase a device which is specifically designed to discharge ni-cads to a low but safe voltage.

Standard AA ni-cads are typically rated at 1.2 volts versus 1.5 for a standard AA alkaline. The power stored in a battery is usually represented by the amount of current it can deliver for a specified period of time. Standard ni-cads are rated around 600mAh(milli-Amp-hours). If you had a scanner that drew 100mA of current while in operation, then you could expect to get a maximum of 6 hours of usage from the ni-cads. This is an ideal case and is not obtainable because most scanners will shut themselves off well before the batteries are exhausted.

High capacity ni-cads are typcially rated around 800mAh and are able to store more energy allowing you to run your scanner longer. Another type of rechargable battery is th Nickel Metal-Hydride. This batteries are even more expensive but can deliver 1000mAh or more.

My Web Page

Having been into radio monitoring for a number of years and owning a large number of radios, I devoted quite a few of my web pages to convey some of the most useful and often sought information about this hobby in one place.

There are quite a few links to various FAQs and some of the best scanner sites on the Internet. I also have detailed pages on a number of the radios I own with some including reviews I have written as well as other useful information. There's also information on antennas, including a review I wrote, as well as reference material I find handy and a significant amount of material to help those of you just getting started in the hobby.

If you are interested, stop by
my web page. And if you feel so
inclined, drop me an e-mail as to what you think!.

Courtesy

Above all else, let's try to act like ladies and gentlemen. It is all too easy to misunderstand the written word. These days there is simply too much bandwidth being wasted with personal wars and flaming. It is also very easy, considering the level of anonymity involved, to forget that there are real people behind these words. Just because you are not in a face to face discussion with an individual does not give anyone more of a reason to be disrespectful.

Let us all try and be as considerate as possible. Ask someone a question asking for clarification if you are unsure. If it does turn into a personal battle for whatever reason, take it offline with direct e-mail. You'll gain no one's respect by wasting bandwidth bad-mouthing someone else and using foul language.

Take a deep breath, count to three...

Thanks for reading this. If anyone has other topics they feel would be relevant to put here, just send me e-mail with your suggestions.

Strong signals to all!

Rich Wells

I agree with the initial comment. The Australian guy was wanting to
know if anyone wanted to hear the file for "entertainment". You really
did work as a "Peace Offices" interesting job; and an interesting job
for all your "Brother Officed"

<me@noplace.special> writes
>The bloody control channel tells the radio what frequency to use for a
>particular talkgroup,

Huh !! If only -- life would be real easy !!

Over here in the UK & Europe, the MPT1327 trunking systems used sends
the channel number (in 10-bit field) only, so the receiver or any
trunking decoder needs a look-up table to convert channel number to
frequency...

> so why would the scanner need to have it
>programmed in
>ahead of time? That defeats the purpose of having the scanner if you
>have to do
>all of the work for it.

As I said, UK/European trunking based on MPT1327 needs a look-up table
(or I suppose, one could calculate the frequency from the channel
number, but this method has limitations..)

I would be *very surprised* if your US trunking did not work in a
similar manner...

Does your US trunking send out a channel number ?? Or is it done some
other way ??

Regards..

I have an AOR-8000 <BRAND-NEW> for sale... $625 + shipping.

This is an unblocked UK-version radio... I bought 2 units, & cannot
afford to keep both.

I can do a credit-card charge, for the cost of the 'plastic' fee.

Pro 2022 200 channel scanner-base unit for sale. Excellent condition, includes the following:
ac power cord, instruction manual, antenna, optional DC(DC cord not included)for mobile use, full coverage in the 800Mhz range(cell).
Some features include:Memory backup(9-volt battery required), liquid crystal display(bright backlight dislpay for low light use), two-second Scan delay, Lock out function, Ten Channel-Storage banks, Priority channel, Direct frequency Search, and Monitor memories, squelch control, volume control, headphone jack, as well as extension speaker jack to name a few.

Asking $200.00 for full package. Shipping and handling included. Will send Priority mail.

If you have any questions concerning anything my E-mail is JustinScott@rocketmail.com

David, Yes the Motorola trunk scheme does in fact send the FCC Channel Number to the radios. As the TTracker is allready decoding the data stream, it would seem to be no big deal. I suspect that doing so was getting " a wee bit close to copyright infringement". As I don't have my TTracker yet, I have not heard from anyone who tried to just program the control channel and see if the scanner can follow the conversations from that.

The radio has to be decoding the channel number data or the radio would not be able to follow a conversation, regardless of how it is working. My question is, after decoding the channel number, if it doesn't self synthesize the frequency, it would have to determine: 1st the actual talk frequency by converting FCC to Frequency, and then, determine where, in the users random programming, that frequency is stored in the scanner, and then tell the scanner to listen there. It would seem, in the timing of things, that simple self generated frequency synthesis would be simpler, but, the jury is still out as I have seen no definative answer. I suspect that programming "all the channels" as Uniden wants you to do may be just for initially gathering the control channel. It would take some knowledge, and several days of conventional scanning to determine which 4 frequencies are used as control channels on any given system, so to cover all bases, they want you to program all the channels, maybe??? Mine was shipped today so will be able to check it out soon.

0697

Greetings, fellow radio nuts,

Dave K. sent some Kansas City area railroad frequencies to me a couple months ago. Upon receipt, I placed it with my important papers. Unfortunately, anything smaller than a pickup truck that gets close to my computer desk vanishes as if sucked into a black hole. The list was no exception—it disappeared with a barely audible "pop" similar to the sound of a stuck finger being pulled out of a soda bottle. But just the other day the list unexpectedly showed up out of nowhere. Numerous government agencies have been studying this ongoing phenomenon, but to date they have no explanation for it. So, Dave, I finally got your info in the column. Here is a chunk of the list:

(The second frequency in any entry is a repeater input.)

Amtrak End of train telemetry
161.175 Carmen 457.9375

BNSF (BN Lines) Gateway Western

More of Dave's extensive list next month. Thanks for the frequencies!

Dale sent a clipping from a recent edition of the Garden City Telegram.

Title:
"Patrol plan not embraced by all."

Subtitle:
Garden City to lose its center.

Wichita (AP)-the Kansas Highway Patrol plans to eliminate six state highway patrol dispatch centers and create a central dispatch center in Salina, maybe as early as next year, patrol officials said.
Under the plan, the state's 420 troopers will communicate simultaneously with Salina dispatchers via a statewide radio system.
But not everyone is happy about the idea.
The change will be painful, especially for many of the patrol's 62 dispatchers around the state who face moving to Salina or losing their jobs. The highway patrol will close dispatch centers in Garden City, Olathe, Topeka, Norton, Chanute and Wichita.
The highway patrol also has a dispatch center in Salina that will move to the new headquarters. The dispatchers for the Kansas Turnpike will not be affected.
Some current and retired dispatchers are concerned that a single dispatch center and a statewide radio system will be vulnerable to malfunction, will isolate dispatchers and could even put troopers in jeopardy.
Jack Walker, a retired Wichita dispatcher with 31 years of experience, has written letters to several Kansas newspapers, state lawmakers, Gov. Bill Graves, Wichita Mayor Bob Knight and Wichita Police Chief Mike Watson.
Walker said that a single dispatch center in Salina could be knocked out in bad weather, cutting off troopers in outlying areas. In other circumstances, he said, a dispatcher in Salina could lose track of a trooper who needs help hundreds of miles away.
As it is now, Walker said, regional dispatchers know the layout of their respective communities and work closely with local police and sheriff's departments.
"You will lose cooperation with all those departments," Walker said. "Communications need to be centrally located in the communities they

serve."
But patrol officials say distance between dispatchers and their troopers is nothing new. Trooper John Eichkorn, a patrol spokesman, said one example is in Wichita, where dispatchers direct troopers in Barton County--125 miles away.
"The big thing is, with a consolidated dispatch center, you have got the ability in one room to know exactly what is going on all over this state," he said.
Patrol officials in Topeka are weighing the dispatchers' concerns, Eichkorn said.
Some jobs will be eliminated, but Eichkorn said it is too early to know how many.
"We are talking about some people's jobs, and I understand that," he said.
The new center is expected to save state money and improve communication among troopers.
The dispatchers will be assigned to specific areas of the state and will sit together at 14 dispatch consoles according to their geographic area.
"You (the dispatcher) will get to know locations because of your experience," Eichkorn said. "You don't have to be there to know what is going on in your area."
But retired Wichita dispatcher Wayne Larson said dispatchers need to be familiar with the part of the state they are covering.
"People have to know what roads run where and when," he said. "You have got to know the territory the troopers are working in."
The new Salina dispatch center will be on the grounds of what was once Marymount College in Salina. The patrol's training center already is located there.
Back to my ramblings, now. Isn't it interesting that the "officials" know more about dispatching than the dispatchers? You may have noted that the "official" said all of the changes are expected" to make things better. Of course he's going to say that. Can you imagine him saying, "Well, this will really screw up the communications and put some troopers in the hot seat, but we're going to save money."
I have my own opinions on the subject'but you don't want to get me started.

Well, the radio stork delivered 2 bundles of joy in the last couple of weeks. Don (Ellis County) and I are now the proud new parents of our own Uniden TrunkTracker scanners. I've been nursing mine for just over a week, and Don got his a few days ago. Just like a real baby, mine has been keeping me up at nights'I can't bear to shut the thing off! My unofficial opinion of the unit is "fantastic!" It's performance as a standard scanner is outstanding, but the trunking feature is obviously the best point. Mine got hooked up to our test equipment at work, and it showed a sensitivity of .2 micro-volts in all ranges except for 160 MHz where it clocked in at .3 micro-volts. That ain't too shabby.
Don submitted TT codes for Ellis County. In KC, there are 3 public

safety Motorola trunked systems to monitor. Kansas City KS, Johnson County, and Raytown MO. There are a number of non-public safety systems, but my current interest is the first 3 mentioned. Here are some of the codes for Ellis County, KCK, and Johnson County.

Ellis County and Hays:
Freqs 856.2125,857.2125,858.2125 (not yet active but soon will be)
865.4875,864.4875,863.4875,862.4875,861.4875
Primary Talkgroups:
LAW: 57392
LAW PVT: (Car to Car and backup Dispatch) 58256
EMS/FIRE: 57424
TAC 1: 57456 (Injury accidents, fires, etc.)
TAC 2: 57488 (same as above)
TAC 3: 57522 (Skywarn and EOC Ops)
CMN PVT 1: 57584 (Used for County Fair, Wild West Fest, etc.)
CMN PVT 2: 57616 (same as above)
There are several others, but these are the basics. Each agency has its own talkgroup for car to car traffic.

Thanks, Don. Keep searching and report what you discover.

Johnson County:
(Keep in mind that much of the county is still on the VHF system they have had for years. By this summer most of the agencies will be moved over to 800. In the meantime, don't expect a lot of traffic on some of the groups.)

Public Safety Common

(I think "common" means interagency and/or mutual aid. This code shows up in some KHP radios as well. There are other groups that will be for actual dispatching of units.)

I have to make a correction to a previous reply to a question about the Optoelectronics OS456 and the OS535 boards. There were some questions brought up about my answer so I contacted Optoelectronics for the facts. I previously said the following about the OS535 board:
> I believe that there are 3 versions (differences in the CPU
>programming) on the OS535 boards. They are as follows:
> 1.) Cell-blocked with code enable
> 2.) Cell-blocked cannot enable with codes...this would be the CPUs that
>have been recently programmed, not the "remaining stock" items.
> 3.) Cell-enabled for FCC approved and Telecommunication engineers
>Please note if the above is correct, or if there are any variances.

I also noted that this was the same for the OS456 and that any Cell-blocked, code enabled boards were just a "remaining stock" issue. This was not the case according to Optoelectronics. Their reply is as follows:

John,
You are correct in regards to the OS535.

There is only one version of the OS456. The Pro 2006 could be unlocked through a hardware modification so it wasn't necessary to have different versions of the board. If the actual scanner was unlocked then it could receive cellular, if it wasn't it couldn't.

I hope that this clears up any of the confusion that I may have caused.

Don't know which one to get. anyone familiar with these can give me there 2 cents worth. I like the pro 26 for its regular battery use but sucks not having the ability to plug it into the wall at home. On the other hand, the 3000 battery pack seem expensive. randy

3289. BC80XLT vs SC150B

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: Dominator <AlexMorse@paradox.net>
Message-ID: <33933C44.568F@paradox.net>
Source record: 195698
Cross-posted to: rec.radio.scanner,alt.radio.scanner

On the Uniden website www.uniden.com the BC80XLT has 50 channels, 11 band coverage and includes 800MHz. The SC150B has 100 channels, 12 band coverage, includes 800MHz and aircraft. What band range does the SC150B have that the BC80XLT doesn't have?

Is the 800MHz on the BC80XLT not as good as the 800MHz on the SC150B? And is that cause the SC150B has one more band than the BC80XLT? How come my BC 350A has 11 bands just like the BC 80XLT and doesn't include 800MHz?

I would greatly appreciate answers sent to me. Thank you very much!

> Other than that, the unit works great.

Steve,
Pro-60 is a triple conversion reciever whereas your 51 was
double conversion. Triple conversion was designed to help keep
images to a minimum...which is what you discovered!
And triple conversion, for the "newbie", will enhance your
monitoring. You won't have to be wondering why there are
commercial aviation communications in the police band(which
happens on cheaper dual-conversion units due to images).
Congrats on the new toy and happy monitoring!

> Anyone know how to modify this scanner to receive all frequencies??
>
> Realistic Pro-34

Only one way:
Remove the antenna.
Throw the Pro-34 away.
Replace it with a full-spectrum scanner.
Replace the antenna.
Then get a better antenna.

Seriously, there is no way (that makes financial sense) to make a
scanner receive frequency bands that it was never designed to receive in
the first place.

This isn't a new idea at all. Bill Cheek's first book covered it.
You want to tap out of the last IF, but before the detector stage.
Thus, the output will be at the last IF frequency (if you tap off the
previous If, the output will be far too high).
To do this for the 2022, you will probably need the service manual
(available from Radio Shack), unless someone has done this, and knows
the pick-off point.
From the pick-off, run the signal through a .10uf cap and a 10K
resistor, then to a shielded cable to a jack on the back panel. Frim the
jack, run a patch cable to the antenna in of the SWR, tune tot he IF
frequency on the SWR, and you're in business.
Good luck!

GREAT REPLY!

How? A little info maybe?

I have one, it sucks on VHF, Optoscan TELLS YOU THAT IN THE LITERATURE!
<G>

It's designed for UHF & 800, which it's decent on. Keep in mind its
sold for the Scout, and it's sister & brothers. When you are searching
for freqs with a counter, it helps the counter to find semi-known freqs
by eliminating other _out of band_ RF. For that, it's designed purpose,
it works well. With a general purpose multi-band radio, it's fine.

Barry

>further information or assistance!

I don't know how they got dated 4/30 when he bought them before 4/25, but if it was the financial institution that issued them then it would seem they are at fault. It could be the case that Keith paid $550 for them and they are the ones with your money. I do find it odd that Keith hasn't returned any of your phone calls. I think an honest person would be more than willing to help you get your money, especially since he is local to this financial institution!

This would probably be worth seeing a lawyer about this. For a relatively small fee they could write a couple nasty letters (to Keith & Moneybox). A lot of this is all that's needed. Needs to be from a real lawyer though to work.

Also, the FDIC and government agencies such as the Secret Service would probably be interested in this. i'd definitely call the SS. Any kind of money fraud is their territory. If this Keith guy can make money orders whenever he wants they will definitely want to catch him.

Good luck and keep us updated if you do any of the above!

Well my vote would be Miller Lite.....keeps you agile enough to jump to
the window when that police call ends up in your neighborhood. As far as
an antenna, I have numerous antennas made by MaxRad. I order them with the
coil closest to the Middle of the spectrum I want to listen to. Seems to
work rather well....although not as broad as some. I find that a plus
though.

Yeah, I bought an AOR 3000A from them a few years ago. I think it was a week or so late in getting to me. I had to call them to find out why I hadn't received it. They told me they were running behind because of the surge in orders before the ECPA went into effect (the same reason I was buying it). I got it in good condition, it worked and I was happy.
I sold it a few months later because I needed the money for tuition.

While out doing my rounds of the local pawn shops today, I ran across yet another scoop on a great scanner, I now have another Pro 43 to add to the list I posted earlier of scanners for sale. This one (as well as the other one I have posted) both have serial numbers without an A at the end which means they are modifiable (keeping in mind that listening to cellular phones is illegal of course)

Same price as the earlier post of $225.00 or trade for something interesting. If someone wants to take a couple of these off my hands in exchange for something good, email me at jenifer@halcyon.com

I have excellent results with the Radio Shack magnetic mobile mount.
It's the "all band" antenna with the two loading coils. It runs about
$40. I can hear 5-6 weather stations with it, and I can hear almost
all the fire engines all over town, direct, unrepeated. I have also
tried some of the $19 rabbit ears from K Mart. They're kind of
unwieldy, but I have heard some 2x image frequencies from shortwave
stations using them. Both antennas have proven to be quite adept at
pulling in skip -- if it's a real strong weather front.

The UBC9000XLT doesn't need cellular frequencies to be restored, because it already can receive them. The UBC9000XLT is the European model of the BC9000XLT scanner sold in the US/Canada. Note the difference in the model number. The UBC models have cellular coverage; the BC models do not and cannot
be restored.

Too bad it really has to come to that. I had the same worries when I
bought a used ham radio, he wanted the money up front, so sent a postal
money order for the amount plus shipping, and sat there and waited for the
unit. It did come in, and everything worked out, but it is terrible to
think of what MIGHT happen.
The internet is a wonderful source of used equipment, too - but people
like this Keith Mc Clure spoil it for everyone.

You missed the original post, there. The guy did send it COD, cash only, but UPS acepted a money order (as is their policy). The money order received was a bogus forgery, bought for $1 and then the amount apparently professionally changed for the sale price.
C O D means something but then so does F R A U D

> diving the decimal number displayed by TT by 32 and
> checking that there is no data to the right of the
> decimal place. I forget what that part of the number is
> called at this moment.
>
Sheesh were are all the math users in this group! I made
and error with this post and I have been waiting for
someone to 'flame' me or at leasst correct it. Now that I
have a few minutes I will correct myself.

Since all moto hex codes must end in zero for a valid
talk group in the system design it would follow that some
decimal numbers can not properly exist for TG id's.

MOTO HEX UNIDEN DECIMAL

1 16
3 48
5 72
7 etc.

The first hex code is actually 10 but they drop the zero.
The step is 2 hex after that or 32 decimal between talk
groups.

Since there can only be three moto hex codes plus the
zero which is missing then the max decimal number is
around 65536.

Since they drop the zero there can only be 2048 possible
TG assigned max.

To calculate if you have a valid TG and not something
else one would first subtract 16 dec and then divide the
result by 32 to see if it has no remainder.

Best would be a spreadsheet like Excel that instantly
shows you where you are using DEC2HEX function.

Now flame me or correct these assumption for the benefit
of others.

3334. RS Pro-60 on Sale till 7/5

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: Bob Brubaker <bob@belvoir.army.mil.NOSPAM>
Message-ID: <01bc6f3f$90299bc0$957534c0@brubaker.belvoir.army.mil>
Source record: 195779

As has been posted here the RS Pro 60 is on sale

Yesterday my local RS sales clerk did a computer price check.
I noticed that the current sale price is good till July 5

He felt that this current price is a clearance price, but didn't know
anything about the features of the replacement

3335. Re: Cell Phone Tower Transmit Freqs

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: mulligan@ACM.ORG
Message-ID: <5mu671$ag0@HOPPER.ACM.ORG>
Source record: 195780

krubsack@pacbell.net (Mark Krubsack, KE6OI) asked:
> Can someone post a list of cell phone tower output freqs?

TOM BUCKLEY <bucko@visuallink.com> asked:
> where can i get a list?

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital). |
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

Message-ID: <5mu8d2$aj7@HOPPER.ACM.ORG>
Source record: 195781

coleman3@flash.net asked:
> Would anyone tell me how to receive tv on my scanner?

Assuming your scanner covers the appropriate frequency ranges, select
Wide FM mode (if your scanner has it) and tune to the audio freq. for the
desired channel -

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Television [73.603]

Ch Range Video Audio

2 54 - 60 55.250 59.750
3 60 - 66 61.250 65.750
4 66 - 72 67.250 71.750
5 76 - 82 77.250 81.750
6 82 - 88 83.250 87.750
7 174 - 180 175.250 179.750
8 180 - 186 181.250 185.750
9 186 - 192 187.250 191.750
10 192 - 198 193.250 197.750
11 198 - 204 199.250 203.750
12 204 - 210 205.250 209.750
13 210 - 216 211.250 215.750
14 470 - 476 471.250 475.750 }
15 476 - 482 477.250 481.750 } Range for Ch. N
.. ... - ... . } Low = 386 + 6*N
68 794 - 800 795.250 799.750 } High = 392 + 6*N
69 800 - 806 801.250 805.750 }

Note the gaps between chs 4/5, 6/7, and 13/14.
Freqs in the 470-512 MHz range (Ch 14-20) may be assigned to
Public Service mobile use in major metro areas. No transmitters
are allowed on 608-614 MHz (Ch 37).
Each TV channel is 6 MHz wide. The video carrier is 1.25 MHz
above the start of the range. The audio carrier is 0.25 MHz below
the end of the range. Television audio is wideband FM.
Some TV stations may be offset +/- 10 kHz.

Anyone know the correct preprogrammed fleet map for TT for NJ State PD.
I assume the 4 digit codes which come up on my TT for the
NJ State PD are Type I. 5 Digit Codes Type II ? Anyway I
see that 4 digit codes are displayed without hyphen so I
must need a different fleet map. Am I correct that 3 Com
4 Com 5 Com must have different fleets all calling, as I see
different ID's. What fleet Map will alow me to properly display
Type I & II Id's. Thanks !

3340. Re: TRUNKTRACKER-misssed feqs? another approach

Newsgroup: rec.radio.scanner
Date: 1997-06-02 00:00:00 UTC
From: "Neal R. Fildes" <fildes@att.com>
Message-ID: <5mucq9$lug@newsb.netnews.att.com>
Source record: 195785
Cross-posted to: alt.radio.scanner,rec.radio.scanner

In many cases, trunked systems will not be in a scanning guide since they tend to avoid certain classes of licensee. My approach has been to search for active data channels, than use TRUNKER.EXE to suck out a list of active voice frequencies.

Often the lowest-frequency channel will not be among those actually allocated to
traffic, so will only be active every 10-15 minutes when it will be used to issue the
licensee's id via Morse Code. By hacking TRUNKER.EXE, one can find out that frequency as well, since a command is that gives the frequency, both at
the beginning and end of the CW interval. Then, assuming you can 'listen' in morse,
one could get the licensee's callsign and search for them in some database for
more info....

The TRUNKER command in question looks like:

ID Field (16 bits) 0xF000 + freq# at beginning of interval, 0xE000 + freq# at end
Group bit: 'GROUP'
Command Field (10 bits): 0x3A0

Cheers!
nrf

3345. BC 9000 Vs. 8500

Newsgroup: rec.radio.scanner
Date: 1997-06-03 00:00:00 UTC
From: Steve W <swilliams@highway1.com>
Message-ID: <5n08m3$ap81@wbnws01.ne.highway1.com>
Source record: 195540
Cross-posted to: alt.radio.scanner,rec.radio.scanner

My brother-in-law recently picked up a BC 9000 at the Rochester Hos-Traders Net in New Hampshire. He paid $200.00. I fell in love with this radio and I just have to get one for myself. I saw a posting for a BC 8500 and was wondering how the two compare. In my limited time here, I get the impression that the 8500 has a poor reputation, and that the 9000 is a great unit. Is this true?

Thanks

Steve

Hi, I have a pro 2004 in mint condition except for small scratch on
plastic key pad (small as a pin head). It comes with the original box and a
pro 2004 manual. Backlit lcd works perfectly as well as everything else.
Only $250 us funds. Can be upgraded to 400 channel.

Operating Modes
AM/
Narrow Band FM/
Wide Band FM/
Programmable
Scans in steps of 5k, 12.5k, 50kHz
Has 10 monitor/search channels independent of the 300 channel memory
Standard or Sound Squelch

The following are most of the trunk tracker codes and the various talk groups
used by the various agencies on the City of Little Rock Arkansas trunking system. Mobile Data terminals are employed, as well as digital voice privacy capability (although its rarely used). Narcs and Tac units use full
digital radios at all times, and are thusly not listed.

12816 City Common/Shannon Hills Village PD
16 LRPD Dispatch (Main channel 7)
48 LRPD Secondary 1 (channel 8)
80 LRPD Secondary 2 (channel 9)
12848 City Special Events (President Clinton visits)
58368 PD-ASP (Interagency PD)
6416 LRFD Dispatch
6448 LRFD Fireground 1 (all Enroute and working fires)
6480 LRFD Fireground 2
6512 LRFD Fireground 3
12880 OES Administration (911 Center)
6608 LRFD Hazmat (seldom used)
6640 LRFD Bomb Squad (seldom used)
6672 LRFD Rescue (Seldom used)
112 LRPD Common (car to car BS channel)
48624 North Little Rock PD 1
49904 Sherwood PD
49936 Sherwood PD
48626 North Little Rock PD 2

I think it will take the same amount of time the cell phone companies used
to stop people from listening to cellular. :-)

Hi Gilbert --- The Proper spelling is "Nickel Metal Hydride" --
Go to http://www.hotbot.com/
Type in "Nickel Metal Hydride Batteries" or "NiMH Batteries"
and you will get over 500 URL's -- many selling Nickel Metal Hydride
Batteries.

Source record: 195553
Cross-posted to: alt.radio.scanner,rec.radio.scanner

for the motorola system in question, the frequencies are easily calculated
from the data
provided (= beginning frequency Plus the number given Times the channel
spacing) at least
for 800 mhz, which is what trunktraker supports. This particular
shortcoming seems to be
a quirk of weak design/programming - in theory, one could find a data
channel, let the scanner
start monitoring it, and have the scanner add the utilized frequencies to
the bank in question.
Any frequencies on which no voice assignments are made would be worthless
anyway, so
I consider this one area where future tracking scanners could get better.

Also, 'individual calls' could all be assigned to a pseudo-trunk-group-numbe
r which the user could
then enable or disable as desired.

>I would be *very surprised* if your US trunking did not work in a

No, I think it may be sooner than that because it may be possible to
make a small software change on the base-signalling-side of the system
to defeat the TT and then upgrade all the mobiles....

I think it is nice that you are helping to connect those
interested in the Trunk Tracker. That is commendable.

Unfortuantely these 'java code in a browser' based chat
rooms are pure misery in 'slow'. The people that think
anyone is going to put up with donwnloading code
everytime you want ot do something have rocks in their
head. I have a 200+ pc and I detest anything that is
slow. Been there, tried it and no I am not going to
participate again.

If you are using a decent IRC server for the chat room
post that address and I will connect with MIRC. Other
then that, try ICQ. With ICQ chat has been very fast and
multiple people can join in.

3365. Good mobile antenna

Newsgroup: rec.radio.scanner
Date: 1997-06-03 00:00:00 UTC
From: gpitts@ix.netcom.com
Message-ID: <339381ea.336513681@nntp.ix.netcom.com>
Source record: 195560

Just FYI, I picked up a Diamond CR-627B mobile antenna at Dayton this year. I do some ham radio (2 meters), but the primary reason was to give me something I hoped would be a good all around antenna for the scanner. Now, I don't have anything to compare it to, but at first glance it appears this antenna is a real winner. It is resonant on 50, 144, and 432 mHz and performs much better on 800 mHz than a cellular glass mount antenna. Lots of surface area on this puppy.

Now, it's not cheap, $100 for the antenna and $60 for the mount, but if you're looking for superior receiving capabilities, I think you'd be pleased with this one. And, being resonant on 50 mHz, it does a good job on state troopers and baby monitors (nudge, nudge...) as well as the higher stuff. I suspect the base mount antenna for this frequency combo would also do a very good job.

Just wanted to pass that along.

Good tuning!

From: Jason Webb <jwebb@bellsouth.net>
Message-ID: <3393EA85.6541@bellsouth.net>
Source record: 195561

Well I must first say Well done to The Ham Station in Indiana
they got me a trunktracker in a day

well the system here in Orlando is Type II and in Seminole county they
use type I

I was able to crack the type II systems fairly Easily and was able to
log 80% of the talkgroups in the systems in about two days.

my only real gripe is the speaker volume which is too low for noisy
areas.

programming is easy as can be expected (It will not program itself)

I purchased a dedicated 800 Mhz antenna and now I can recieve
systems up to 30 miles away loud and clear

itermod is practically non existent and I have found no images watsoever

Type I fleet maps are a pain but hey I like a good challenge.

the extra battery and seperate charger are a definate plus.

even the antenna supplied with the radio works better than I expected.

for $265-$300 this is a great radio

I cant wait to see what new models come out!

THis is also the most sensitve uniden scanner I have ever seen.

well just my Opinion

And remember be a responsible scanner owner

that way everyone can continue to enjoy the hobby.

abuse it and we will lose it

That was the very first thing I did. I don't even know where the OEM
antannae is any more

>itermod is practically non existent and I have found no images watsoever

In downtown Atlanta, it's intermod city, but not on the BC235

>Type I fleet maps are a pain but hey I like a good challenge.

But still a pain in the arse

>the extra battery and seperate charger are a definate plus.

The only draw back is the cordless phone type connector for the batter
pack. I think something like a Motherola pack would have been better.
But, I still get between 10-12 hours on 1 pack!

>well just my Opinion

Mine too!

********** It Sucks

GREAT REPLY!

I have one, it sucks on VHF, Optoscan TELLS YOU THAT IN THE LITERATURE!

********** Well that is why I do not use one

It's designed for UHF & 800, which it's decent on.
Keep in mind its sold for the Scout, and it's sister & brothers.

++++++++++ Scout may sells it
But they buy it from Comet.
If you use it on a duel band radio, they work ok.
The scout is dead with it on the unit.
I use a ant is its length plus 1/2 longer it is slimmer and works very will for
general use 150-460-800-cell before ypu change to a selective ant..
I also have some special ant for 900-800-cell-460-220-150-air

The scout needs to be a little hotter - not much - just a little and that will
help with the range problems

I believe 108-110 is the low portion of the aviation band, where they
put VORs and things.

>>No one in the U.S. is (legally) selling the AR-8000. The FCC withdrew the
radio's type acceptance certificate after they learned that it could be
re-programmed to tune cellular telephone frequencies with a computer,
interface and Scan-Cat Gold software.<<

Funny how the FCC all-of-a-sudden figured that out after the Gingrich interception brouhaha. The rest of us have known about the mod for how many months now?

There's an ad in the new (June) issue of Monitoring Times for a company out of Canada that's selling the 8000s new. They claim a full refund will be given if the radio is seized by customs at the border.

I posted this response when the same question was
posed 6 weeks ago:

I tested both a PRO-26 and two BC3000XLTs.
I bought a BC3000XLT, though they are both very good scanners.
At roughly the same price, the BC3000XLT is a better value.

The two models are quite different in the feature, frequency
coverage, firmware, and performance arenas.

Peformance wise, the BC3000XLTs had superior VHF-high band image
rejection and better audio (due to a larger speaker).

The PRO-26 wastes time scanning empty memory channels and lacks
a frequency query, but has a larger, higher contrast LCD.
The PRO-26 has wider frequency coverage, but 50% fewer channels.
It can easily be powered from AA cells.

See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT,"
by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Reprints of articles from Monitoring Times are available
for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises, P.O. Box 98, Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

Note: I don't get any part of the $3.00.

Buy the $10 AC adaptor and you can run the 26 at home. You
can use it just for power or to charge up AA ni-cads inside
the radio. Attached is my standard sizing up of these two
radios.

Strong signals,

--------------60596C3C5272
Content-Type: text/plain; charset=us-ascii; name="26VS3000.NOT"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="26VS3000.NOT"

Here are some pros and cons from my point of view :

Pro-26
Pros Cons
---------------------- ----------------------
Size Audio quality
AA battery power
Search lockout review
TV channel coverage
Large display

BC3000XLT
Pros Cons
---------------------- ----------------------
Audio power & clarity Size
400 channels Ni-cad
Battery saver mode
Stereo headphone jack
Better filtering

Both have auto-store, 50 channel search lockout, great backlights, pre-programmed weather, data skip, step size selection, frequency modulation selection, per channel attenuation and lockout delay, keypad locks and are supplied with average antennas.
I like the flexibility of the Pro-26 for batteries and it's ability to receive the TV audio channels that are blocked in the BC3000. But I must admit that as much of a pain as the BC3000's ni-cad is, it does get more use because it has more channels to work with auto-store and has louder and clearer audio.
Overall, they have nearly identical sensitivity. In certain ranges one might be more sensitive than the other but over the entire receive range they equal out. If you are a military aero buff, the Pro-26 kicks some butt in the 225-400MHz range. BC3000XLT is just too deaf in this region.
Since both radios are manufactured by Uniden to be the top units in their respective lines, I think you can see why they are similar. Both are priced just below $350 last I heard.

The NorthEast Ohio Monitoring Association, in cooperation with several area TV Stations and Paging companies is now forming...

The NorthEast Ohio Paging Network!!!

This paging network is very similar to the ones found in other parts of the country like NYC, Chicago, Colorado, etc... (see botom for links!!!)

The network is designed to send Alphapages for the following types of events:

Major Fire Incidents
Major Police Incidents
Rescues
Haz-Mat Incidents
Major Accidents
Local and Regional Disasters
Major EMS Incidents
Local Weather Warnings
Local and Regional News Events
Local Traffic Tie-up Reports

In these areas:

Akron/Canton Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

Cleveland Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

Youngstown/Warren Metro Area...
Police Events
Fire & EMS Events
News & Traffic
Weather Watches & Warnings

We are looking for monitoring enthusiasts in all of these areas who may be interested in becoming monitors for the network.

For more information please E-Mail:
jwhitinger@worldnet.att.net

I beg to differ - some of the juiciest information is on those private calls! and if you are into soap-opera, you can track down which officer is interested in what other officer of the opposite gender via tracking those calls...
in addition, if you want to know what your local cops are REALLY up to, private calls can be VERY important!

I've been watching the Warren County, Ohio system with a variant of Trunker.exe and found the Icalls to be a significant portion of the 'interesting' traffic...

sales@advdig.com (Sales Department) wrote:

#->In my humble opinion, being a land-mobile dealer, everything (almost)
#->will be digital in the next 4-5 years so scanners will become,
#->basically, useless for trunking systems. Look at what Nextel and others
#->have done with their digital systems - Cellular, 2-way, alpha/numeric
#->paging, caller-ID, etc. all in one little unit which can't be (easily)
#->intercepted with conventional equipment. Don't you think old MOT will
#->offer a great trade-in on that old analog system and sell a new digital
#->system that can do, basically, anything from voice to data ?
#->
#->I'm not an advocate of "securing" communications - that's just where
#->technology is leading - like it or not.
#->

I agree with this to a point. For the big cities with a big tax base,
this won't be a problem

But the smaller towns and/or counties (primarily country farming
communities) simply won't be able to convince their
citizens that this is an absolute necessity, and most likely their
tax base won't suport such an upgraded system it anyway.

My County Commissioner have known each other for years,
and before this Georgia county decide to get any expensive
ideas about spending so much money on what in my county
in Georgia would be a total abuse and waste of taxpayer's money,
she and I are going to sit down and have a nice long talk about these
types of radios.

My personal opinion (which isn't worth much!) is that if I
were king for a day of a large city (say like Atlanta), the
only people who would get digital systems would most
likely be the undercover narcs. The garbage man and
the water man and the meter-maids have absolutely
no reason to have such technology, so why waste the
public funds on them....but on the other hand, when did
that ever stop politicians at any level from wasting
our tax monies? Never!

What I also see as a problem, mostly personal, is that
once Atlanta does go digital, monitoring them will then
become impossible. Due to the very nature of digitial
comminications, scanners that would be able to listen
would only be affordable by the National Security

Agency!

But like I said, just my opinion which doesn't mean much.

Roger Cravens
Atlanta, GA
(But living way, way out in the country with the birds

Over the last few days during business hours, Montgomery County has
been testing their system like you woudn't believe! They are scheduled
to start up this June I hear.

Hats off to Montco for implementing a system that I hear is very
sucessful! It will be an analog voice Motorola trunked system not the
dreaded digital type system.

I hope that the Fire and EMS departments join law enforcement on this
system in the future.

Joe

> to defeat the TT and then upgrade all the mobiles....

That would be assuming the agency was using trunking as a way
to deter monitoring (not usually the case). While it might tick off
Motorola, I doubt they will be able to get large departments to
modify all their radios just to defeat a scanner. They will push
for the sale of more digital radios, however. We already use
full digital radios for narc and tac channel traffic, and have the
option of 'going digital' for dispatch of sensitive calls. I believe
that is more than adequate.

2m, 6m, 10m and CB radio bands were open today.
(around 2:00PM ~ 4:30PM PST, June 3(TUE))

I heard some signals from ????? city, California on CB radio.
I tried to make some contacts... but I couldn't !!!!!
I thought a couple of people replied to me, but I couldn't copy it
!!!! Also I only could transmit in the AM mode... it wasn't a good
choice... but I don't have a transmitter for SSB.

I also heard some music (?) + CW on Channel 17 very loudly at one
time. If you knew where it [the station] was, please let me know.

I live in the southern central British Columbia, Canada.
It's quite good. I usually would hear nothing on the CB
channels... as I live in the small city, but I heard something in the
every single channel today !!

I also heard some continuous digital signal (continuous CW or
something ?) on 26.845 MHz very loudly when I was tuning my HF
scanner. I was wondering what it was. If you know something about
it, let me know.

Well... talk to you later sometime !!

I don't know what they have in Brevard County, but I will tell you that an Ericsson "EDACS" trunk system does use a data channel just like Motorola. The older GE stuff did not and that may be what your thinking about. Those few Public Safety agencies that were stupid enough, I mean thrifty enough, to buy GE, most certainly went for the EDACS operation.

To all scanner enthusiasts,
I have finally finished my Yupiteru MVT-9000 review which includes comparisons to the AOR AR8000, Icom IC-R10, Uniden BC3000XLT and Yupiteru MVT-7100.
I have also written an Owner's Guide to replace the terrible Instruction Manual that comes with the radio. It is about 90% complete and I hope to have it finished in the next few days. For all you MVT-9000 owners out there, give it a read and let me know what you think!
Start by pointing your browsers to

http://www.qsl.net/n2mca/MVT-9000.HTM

Thanks and happy reading!

Strong signals,

> I'd be interested in hearing your opinion. Thank you in advance.

Wow, i'd sure like to be in your buying position :-) If you live in an area with trunked radio systems that you will be monitoring then the 235XLT is a real good idea. If you don't plan on monitoring any of these evil systems, then the 3000 would be great if you plan to carry your scanner with you or the 9000 if it will be mostly used on a desk or next to the easy chair. My opinions; I have friends who own the 235xlt & 9000xlt, they both like thier scanners alot and are very happy with thier purchase. The 3000 has 400 channels divided into 20 banks and tripple conversion (drool). I think the main question is where will you use it most and what will you monitor. All three are great radios.

3411. Pro-60 Question

Newsgroup: rec.radio.scanner
Date: 1997-06-03 00:00:00 UTC
From: steve@testpoint.com
Message-ID: <33943286.273040390@news.charm.net>
Source record: 195711
Cross-posted to: rec.radio.scanner,alt.radio.scanner

After some help from the scanning usenet community, I took my Pro-51 back and exchanged it for a Pro-60 which seems to be a better unit (I'm just a scanning newbie).

One thing about my Pr0 51 was that it really pulled in cellphone images from about 890MHz to 910MHz....the Pro 60 does not pick up anything at these frequencies. Is something wrong with the unit or does it 'reject' the images somehow.

Other than that, the unit works great.

Thanks
Steve

You're not ashamed of being a criminal, and yet you're proud that
you're too stupid and/or lazy to take the time to be able to do the
same thing legally? I bet you're proud to be on welfare, too.

>of thousands of others. I operate sensibly and politely, and have had no
>complaints about my station. Can you say the same?

Yes. And in addition, I can say that I'm doing it legally. Of
course, since I have a legitimate call sign, if someone does have a
complaint, they know where to direct it. If someone has a complaint
about your station, chances are they'd have no way to find your real
name and address.

>Not an Amateur Radio Operator.......and PROUD of it!!!

Source record: 195717

Here is a good start for Indy Meca fans. It is a little less than half of the groups that I am currently working. Some of it is very accurate and some of it is not(description wise that is). I am able to track just about everything I want with this list and narrow my scans to specific areas of town, agencies and etc. I feel this list should save you about 8-10 hrs. of hard monitoring w/your new toy. ;-) You should also add the 859.9375 freq. to the list of freqs. provided in the booklet that comes with your TT. It completes the list as far as I can tell and allows almost flawless tracking.

P.S. In my humble opinion, the TRUNK TRACKER is one of the best things to happen to scanning in a long time! (IT'S WORKING GOOD IN INDY)

Happy Scanning!

I was checking out the FR-1 Receiver
in the Ramsey Catalog, and the coverage looks
pretty good. Does anyone have any idea what is
on those extra channels? (70-88, 108-110) The catalog
said phone bugs, but I don't think there are any around
here.

I sure hope you can find crystals at Rat Shack. I just picked up the
residual crystal stock from one of my local Rat Shacks FOR FREE! Over
70 crystals. Said they were no longer authorized to keep them behind
the counter. I suggest all old scanner enthusiasts and hobbyists check
out their local store QUICKLY.

In my humble opinion, being a land-mobile dealer, everything (almost) will be digital in the next 4-5 years so scanners will become, basically, useless for trunking systems. Look at what Nextel and others have done with their digital systems - Cellular, 2-way, alpha/numeric paging, caller-ID, etc. all in one little unit which can't be (easily) intercepted with conventional equipment. Don't you think old MOT will offer a great trade-in on that old analog system and sell a new digital system that can do, basically, anything from voice to data ?

I'm not an advocate of "securing" communications - that's just where technology is leading - like it or not.

3424. FS: AOR AR-2700 $225

I have an AOR AR-2700 scanner in great condition. It does not have full 800 MHz coverage but is software modifiable to receive full 800 MHz band. Frequency coverage is from .5MHz - 1.3 GHz (less cellular). Accessories include A/C adaptor, car adaptor, 4 NiCd batteries, antenna, manual, etc. Price is $225 + shipping, firm. If interested reply via email.

I have two scanner forsale.

The first is a Pro-51 (29-956Hz). This scanner has 200 channels. I bought the scanner new two months ago. It has no scratches. Has never been dropped. I am asking $165.00 or OBO

The second scanner is a PRO-2036 (29-956MKz). This is a 200 channel Base Scanner. Has autosort and CTCSS, Auto Store of Feq., I am asking $150.00 for this scanner.

I have the boxes for both scanners. I am going to buy a new scanner and must sell these to make room. OK. My wife is making me sell them.

Email offers to rdford@traveller.com

3426. For Sale: "Super" PRO-2004 scanner

>I don't know about the FBI, but you can bet the "gun toting thugs" (ATF) had
>their grubby little paws in it.
>tyler

Tyler,

What in the hell are you talking about? The point of my original post was that Atlantic Ham Radio (a Canadian dealer) had a booth at the Dayton Hamvention where they were selling full-800-coverage Yupiteru scanners, which are not type accepted by the FCC and are illegal to sell in the United States, and that no agency, the FCC, the FBI, U.S. Customs (the most likely group) or the U.S. Attorney's Office, took any action. Frankly, I was surprised, given all the publicity and pressure that's been applied recently, i.e. the withdrawal of certification of the AR-8000 and the recall of the RS Pro-26.
As for your comment regarding the ATF's involvement, I can't imagine how even you would expect the ATF to be involved in the seizure of illegal scanners. You're so damn quick to take a cheap shot that you don't even bother to find out what the target is. God help any other sportsmen if you ever take up deer hunting.

I am a scanning newbie. I bought the Sportcat scanner from the local elec. store. I keep hearing about this new trunk tracker scanner. Does anyone know how much this costs?? I paid around $200 for the sportcat.

Ever since I got my scanner I have been trying to figure out what the hell a trunked system is. I just know that I can hear part of a conversation on one end. then it is gone.

I like scanning alot. what is the next step anyway.. after I get aquainted with my new scanner?

You can buy a ham radio without a license, but you cannot transmit with it, just as you can buy a shotgun but you can't shoot people. Reputable dealers however, may try to verify that you hold a valid amateur license before selling you a unit, in the interests of keeping the airwaves free of unlicensed users.

Not as of April 1994. Until recently, you could get the AR8000 in the
States, which comes with cellular blocked, but can be undone with the right
computer interface and software. However it recently just got it's FCC
certification pulled. Now there are none, unless you buy one used, or go
outside the States to purchase.

Just recently the FCC pulled AOR's certification for the AR8000. The FCC decided that this scanner can more or less be easily modified to pick up cellular (with the right computer interface and software). Thus the FCC will not allow it's retail sales in the US until AOR does something about making the model absolutely cell-blocked, like all the others on the US market.

I'm surprised Grove has not issued a statement in their catalog, or have they?

Mike

At the risk of being redundant. I remember a post from a few days back.
"what are you gonna do when the feds show up at your door and demand your
scanner"? Before you answer, consider that maybe the next month after
that, they may be back for your "transmitting" radio gear. THINK, if they
don't want you to hear, they might not want you to talk either. Jim

No, Dave, there's loads of them in the UK, more than a few dozen (!!)
(but obviously not as many as in the US), but I was really meaning on a
system by system basis (so you might only be talking about a few hundred
or so radios on a system...), so this is *still a practical*
proposition...

Hum, get out the manual for your scanner, find out what its first IF frequency is, usually 18 to 24 Mhz, depending on model, unless you have one of the newer units with triple upconversion systems, double the IF freq and subtract it from the frequency you wish to monitor, and program the result into teh scanner, you might be rewarded with a weak but useable image of the signal you wish to receive. This is a old scanner users trick, I may have the details a little wrong, but the last time I used it was 4-5 years ago. Note this only tends to work on cheaper units. it will get you at least 24 mhz closer to your goal.

To start from the IC level, you could use something like the RF Micro Devices RF2905 Transceiver chip. It is almost a fully-contained radio needing only some biasing, crystals and filtering. It will operate either in the 433 or 915MHz ISM bands and does AM/FM/FSK/ASK/OOK. Their web site has a schematic layout with component values, etc. at http://www.rfmd.com. They offer other devices for receive only, also, however, this is a really unique part.

1420-1427 MHz is a protected frequency band for radio astronomy. You were
probably hearing images or intermod.

Michael,
The 3000 is perhaps average for squelch tails. The Pro-51
is noted for the worst yet I believe...at least among those
that I own. The best to date I have run across is the new RELM
HS200 which is a joy to use. And the new TrunkTracker in Trunk
mode has no tail either making it nice to use too!
On some radios, backing off the squelch just a hair can
make the tail a little or a lot shorter.

3461. Some Trunk Tracker SOCAL ID#'s

Newsgroup: rec.radio.scanner
Date: 1997-06-04 00:00:00 UTC
From: Paul Castellani Jr <cfipaul709@aol.com>
Message-ID: <33962B89.2F35@aol.com>
Source record: 195462

Here are a few ID# for the San Bernardino County area:

(I was using the Rancho Cucamonga freqs for this)

4432----Chino PD
4208----Ontario PD
4272----Upland PD
4304----Montclair PD
4240----Rancho SBSD (Possibly---NOT confirmed)
4560----Some Tactical Talkaround Freq (probably SBSD)

3856----City Services (yawn)

It seems that the general map follows this logic:

2000----Fire/EMS
3000----City Stuff (dog catcher etc.)
4000----Police
5000----Administrative

Hope ths helps!

>College degree. and from looking at your post I feel safe in saying you did
>not finish high school.

I think I'd have to disagree. I think a mojority of the "old-timers" out there don't have college degrees. As a matter of fact, I don't think there was any such requirement until recently when the Feds made it a requirement before they'd let the department tap into certain federal funds. Even then, that only pertained to new hires... the old-timers were grandfathered along, though encouraged to pursue a degree.

At least, this is how it was explained to me during an interview by a chief of police in a mid-to-large sized US city...

Just my thoughts, FWIW.

Sincerely,
Robert McIntyre
rjmcinty@eos.ncsu.edu

P.S. Assuming there is an education requirement, I'd like to think it's not "Requirment 1" (sic). I'd think such things as honesty, loyalty, common sense, and integrity would come first.

3465. MORE UNIDEN BC235XLT 800MHZ TRUNK TRACKERS ARRIVED

Newsgroup: rec.radio.scanner
Date: 1997-06-04 00:00:00 UTC

Message-ID: <5n2iqv$1mm@news.4dcomm.com>
Source record: 195466

Yes: I have 12 more BC235XLT Trunk-Tracker Scanners.

These units are really neat. They will do type l,ll,lll, and hybrid systems. No longer will have to switch between channels manually to ease drop on your favorite police channel. They come complete with Ni-cad batteries, extra Ni-cad, base holder, charger, clip. and even instructions on how to search for your frequencies that are not in your list.

Price is $285.00+$15.00 shipping and handling. Sorry No COD's Postal Money Order in advance shipping same day as funds arrive.

In ca. add 7.75% tax.....sorry

Monty

I just picked up another one of these at 99 buck a roos, last one I had
was mod'able, these aren't. Will need a GRE Super Converter if you want
cellular. You can however get frequent images.
If you really wanna monitor cellular then you shouldn't waste your time
with modding scanners, step up to a CTEK.

I think this is a good little scanner, I've used several different
scanners & proffesional recievers, but when i see the 2026 at 99 bucks,
I think it's worth it. I don't care much for R.Shack scanners beside the
2006,2032 & a couple others, but I think the 2026 is decent & worth the
$99.

> have that the BC80XLT doesn't have?

The 150 covers 108-137 aircraft band...the 80 does not.

> Is the 800MHz on the BC80XLT not as good as the 800MHz on the SC150B?
> And is that cause the SC150B has one more band than the BC80XLT? How
> come my BC 350A has 11 bands just like the BC 80XLT and doesn't include
> 800MHz?

The 80 does fairly well on 800MHz although I have not done a direct
comparison between it and the 150. And your 350A does cover the
108-137 band while it excludes 800Mhz, thus 11 bands just like the 80.

:Should I buy the Yaesu and use receive capability only until I get my
:license in the fall?

If, as you say, the frequency range of the FT50RD is all you require,
and the 100 memory channels is sufficient, then I think you should buy
the FT50RD. Although it doesn't have frequency skip, it has a number of
features that you don't find on most scanners. You get a reasonable
scan speed, CTCSS decode as standard, DTMF decode as standard, and
a 20 second digital recorder as standard, plus it is smaller than
most scanners. Another bonus is that you can lock out PTT function
so that there is no risk of you transmitting. Although I do have a
licence I rarely transmit. I use it mostly as a scanner and find it
works quite well in that role.

There may be only a few dozen trunked radios in the UK, but here in the States we're talking about upgrading THOUSANDS AND THOUSANDS of mobile and portable radios. Not bloody likely, to borrow a phrase. :-)

>Type I & II Id's. Thanks !

Hi Allen,

Since you have the anti-spam thing in your address, I am posting this here.

NJSP uses a Hybrid Type IIi system that has a mix of Type I and II formats.

For Type I, the NJSP uses Motorola sizecode O (Oscar) which utilizes 2 fleets of 16 subfleets each. Actually there are 15 subfleets plus one fleetwide for each fleet. This translates to Unden Size S-13. You have to set up a custom fleet map of S-13, and it will allow only fleets 000 and 400. Refer to the Manual to set up.

For Type II, use S-0 but place the Type II in a SEPARATE system. Since the Type II format is just talkgroups 680 - 69F (which is actually in 000-13) and talkgroups E00 - E7F (400-12) , The TT will not be able to handle both Type I and II because the NJSP chose to utilize this unique configuration.

When you place the Type II in a separate system, you could only scan Type I or Type II but not both at the same time. You can also treat everything as Type I, but you will hear all talkgroups between 680 and 69F in 000-13 and E00 - E7F in 400-12. If you select Type II for the entire system, you will not be able to track any of the true Type I stuff. Now Turnpike and Parkway, not a true Type I format appears to be Type II since they use only one ID and the format looks Type II. There are a few others that do the same.

PS to convert the Type II hex talkgroups to Uniden Format, add a trailing zero and calculate from hex to decimal using the Windows scientific calculator.

Refer to my Web page for talkgroup details for the NJSP at

http://www.erols.com/jcardani/sjscan.htm

Good luck!

Joe

Type II

>Unless the TrunkTracker is not designed the way I think it must be,
>the scanner's limitation is 30 talkgroups, not 30 frequencies, when
>discussing monitoring a trunking system. The control channel tells

Umm. Apparently it's not designed the way you think. The limitation
is 30 actual frequencies per trunked bank. There is no apparent limit
on talkgroups beyond that which is designed into the trunked system by
Motorola themselves. In fact, the user can LOCK OUT up to 100 talk
groups in the trunking mode on a BC-235.

>The scanner should simply obey orders and go to the correct channel
>assigned by the controller and do the Right Thing.
>
>So, the only thing you should really need are the control frequencies.

That is true for Motorola's radios, but not for the TrunkTracker. The
TT listens to the signal, determines the portion that designates the
channel (which is actually an allocated channel number, which is
associated within the Motorola radios' firmware with an RF frequency
and needs no further translation within the Motorola system),
determines what frequency is represented by the channel number, then
looks through the memories in the current trunking bank to see where
you might have programmed that particular frequency, and brings up the
audio for that channel if it's there. The TT does all this in the
blink of an eye.

>If the fire department and police and whoever else you wish to hear
>have more than 30 talkgroups between them, you would have to split
>them up among different banks, but at least you would be able to
>hear all those talkgroups. There's nothing that says you can't
>consume more than one bank with the same system, after all.

There are at least two good analyses on the Web of how the
TrunkTracker REALLY works. I recommend that anyone who was confused
by Bote's attempt to guess how it works go and see what people who
actually know how it works have to say.

> due to the serial I/D config? Iz this TRUE/FALSE

Radio Shack items have a date code in the form 'mmAy', where 'mm' is the month and 'y' is the year (the 'A' stands for A & A Trading, Tandy's import arm). 5A4 or greater indicates an import date after the cellular cutoff.

Radio Shack radios have an FCC ID of the form AAOnnn-nnnn, where AAO is the FCC Grantee Code for A & A Trading and nnn-nnnn is normally the catalogue number of the item. PRO-43 scanners with an "A" at the end of the FCC ID (AAO20-300A) are not modifiable. This does not necessarily apply to any other model.

Unmodifiable PRO-43s have an "A" preceding the serial number. This also does not necessarily apply to any other model.

This posting was brought to you by the letter A.

3506. Re: Why do we have to equal news group ????? Remove alt.radio.scanner and use only REC.RADIO.SCANNER !

Newsgroup: rec.radio.scanner
Date: 1997-06-04 00:00:00 UTC
From: beep@beep.net
Message-ID: <5n47aa$e6h@svna0001.clipper.ssb.com>
Source record: 195526

Your request to remove alt.radio.scanner has been
completed.

You will notice that this did not get posted to
the 'rec' group.

Please note that if you still see this newsgroup,
you will have to reinstall your operating system
in order for this change to become apparant.

Please work with your system administrator to
accomplish this.

Thank you for your newsgroup support.

>to the next frequency, which may or may not be the same conversation.

one recommendation from the 'trunked system users' page' is to arrange the frequencies in your scanner from High to Low (or for aor8000 users, twist the
knob counterclockwise once) for trunked channels, since motorola has the rotation of frequencies working that way, and you at least have a better chance
of catching the same conversation when it jumps...

3516. Help! Trunk System in Brevard Co. Fla

Newsgroup: rec.radio.scanner
Date: 1997-06-04 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <01bc707e$18fdaec0$71d1bbcd@pemble.ix.netcom.com>
Source record: 195656

Help! I have been anticipating the trunk tracker's arrival and ready to order one -- BUT!
all this time I was sure that the Brevard County, Florida system was Motorola. Today I looked at
a web site that listed all trunk systems by state and they list Brevard as an Ericsson/GE system
and not a Motorola.

Does anyone know what we are running here? There is a continuous data channel (that moves)
and I thought that was a characteristic of the Motorola system and not of Ericsson/GE.

Anyone that can help?

Thanks

Cheers

The only sure way to tell is if their are beeps after each transmission.

If their ARE then it is an ERICCSON

If their ARE NOT then it is a MOTOROLA

If by "they" you mean FCC, then by gum they do have Internet connections!
WWW.FCC.GOV is an excellent site, with prompt posting of decisions, both
with the original (.WP) and HTML-ized versions, and various other info.
When you look for amateur radio there, you realize how small it is in
context... it's right where it belongs as one of many "services" in the
wireless bureau.

Depends on what ya wanna listen to....If you live in an area that has lots
of Moneyorola 800Mhz trunked systems, then go for the 235xlt TT because it
does the job!! But if your area still uses Vhf or Uhf then go for the
3000xlt because it does great on these bands....If you have the $$$ GET
BOTH!!! :^) The 3000xlt
has a very fast scan rate and if ya wanna peeve Newtie off, It does
receive cell images in the 1005-1030Mhz range....of course that is what
people have told me, I would NEVER know from personal experenice!! Anyway,
the TT 235xlt is good for 800Mhz trunking (also almost no intermod on vhf
and uhf) and BC3000xlt Great on Vhf and Uhf...

>rx system for my Skywarn wagon. Does this require specialized pre-amps
>and can the image be modulated onto an RF carrier for a small TV?

The 137MHz FAX transmissions are from various satellites. You'll not only
need a special antenna for this, but a modified scanner, that is, one that has
the IF filtering widened to about 40KHz instead of the stock 15KHz. You'll
also need WEFAX software and an interface circuit that plugs into a computer.
I'm not aware of any circuits that will decode and display these signals on a
regular TV set.... at least nothing we can probably afford.

Why am I Hearing Cell calls on 1420-1430 Mhz? Am I Tunning to a Tower or am I hearing an something else?

3537. Sportcat function questions

Newsgroup: rec.radio.scanner
Date: 1997-06-04 00:00:00 UTC
From: phoeg@sprynet.com
Message-ID: <3396e340.716112@news.sprynet.com>
Source record: 195677

I recently bought a used Sportcat from a pawn shop for $70. (To be safe I had my local police dept.
trace it to assure it wasn't stolen. It's clean.) Problem is that it came with no manual! (Or AC
adapter.) I have to order the manual and adapter, and I have figured out most of the operation, but
until I get the manual maybe someone can answer two quick questions.

The first channel in each bank has a letter "P". I'm not sure what that exactly means--I assume it
has some connection with "priority"-- but when you hold the "PRI" (priority) button down for a few
seconds, whatever channel it's on, now =also= has a permanent "P" What is that and how can I get rid
of that? I assume it's permanent on the first freq of each channel, but it must be removable if I
could put it on other channels.

Also, what's the "Turbo" function (collocated with "PRI") and how do I use that?

Appreciate any help you have.

Thanks.

Paul -- N8HOB/1

I have a almost new pro 51 Scanner.
handheld
800mhz (from 29mhz-956mhz) unmodified
200 channels hyperscan
auto band scanning (fire,police,air,marine,wx)
10 monitor channels
BNC connector ant.
hardly used.

$170.00 +shipping

Don't get me wrong. A brief check of Deja News will reveal the fact
that I have little love of Cheek and his attitude. However, that's in
the past, and I see no need to start it all up again, unless the
situation requires it. So far, it doesn't. In this instance, there
are several folks who seem all too willing to hold others' coats while
Bill and his detractors tear the group to shreds. Bill has pretty
much managed to ignore them, and for that he's to be commended. The
instigators need to go elsewhere if they really enjoy fighting so much
that they have to start fights where none exist, just so they can
watch.

I guess you can get it from the Atlantic Radio in Ontario, Canada, also
I have heard they were i at Dayton Hamfest and sold a lot of unapproved
FCC radioes in Dayton without any troubles.

I just got back from a trip in March....

The language will give you a fit (unless you can speak some Celtic)

I tried several bands - found some interesting police activity in the
150-160 area and in the 460-470 area.

No a whole lot going on in general - pretty quiet.
(kinda nice.)

Make sure you declare it when you enter the country -
you might have to pay a tax if you don't.

I noticed your amateur call - You can get a free reciprical license so
that you can actually TALK to some people...
(They might invite you over for a 'pint and a short')
Check www.arll.org to get the necesary forms...

Enjoy!!

Cellulars must be in 800 MHz band. If you hear those in 1420-1430,
it's likely you are receiving the images.

If your local PD opperates on a Motorola 800Mhz Trunked System than i'd say the Bearcat 235XLT. 300 Channels in 10 frequency banks. Scans the Motorola TRS as well as normal frequencies. Pretty nice scanner & is under $300.

3551. New Jersey Marine Police Talkgroup Change

Newsgroup: rec.radio.scanner
Date: 1997-06-05 00:00:00 UTC
From: jcardani@erols.com
Message-ID: <5n72s0$95s$1@elmo.tju.edu>
Source record: 195342

The New Jersey State Police Marine Police on Troop A (south) are now using a separate subfleet for the western part of the state. This area, which covers the Delaware River and Delaware Bay, now utilizes channel A1-10 (formerly Air/Aviation). Stations dispatching the marine police vessels are Burlington and Bivale.

The original A1-06 Marine Police subfleet is now used in the eastern part on southern NJ (on the Atlantic Ocean and intercostal waterway). Stations on this channel include Atlantic City, Ocean, and North Wildwood.

A1-06 shows as group 000-6 on the Uniden Trunk Tracker (size S-13)
A1-10 shows as group 000-10 on the Uniden Trunk Tracker (size S-13)

I am not sure where Air/Aviation moved (which used to be on A1-10), but I suspect it may have switched to a Type II talkgroup.

Joe

One thing I found out. Make sure whatever unit you buy has an external antenna connector on it, you will find that inside your car, without an external antenna it wont work very well. So buy an antenna for your car, and you will be very happy.

I bought the Garmin 38, it worked nice, but the antenna was big trouble for me, I sold it..

Later.....

The Pro-60, IMHO, is definitely the way to go. It has triple
conversion which is better for reducing unwanted interference
and much wider frequency coverage allowing you to hear more
services.

Good luck!

I'm looking for the best way to record trunked
radio. Is it possible?

After doing a little research a few months ago I bought a Garmin 45XL for ground use. This is the same unit that was recently used by the support crew in the unsuccessful attempt to circumnavigate the globe by a balloonist. After a few initial tests with it I was waiting for spring/summer to really put it to use, so I can't tell you a lot about how it preforms in the field.

> UBC3000XLT. It's kind of annoying.

This is indeed the squelch tail you are hearing. Some radios have a long one and some quite short. If you are running your squelch right at the edge it could be making the squelch longer than it need be. Also, as in the case of the classic Motorola Micor squelch, the weaker the signal the longer the squelch tail.

There are many things that effect the length of squelch noise. It could be a function of the hardware in the scanner's CPU. ie: the CPU gets the squelch-closing signal but waits a split second to mute the receiver. Others have a circuit that will slow down the squelch speed for the purpose of adding hysterisis to eliminate chopping on weak signals.

The radios with the really quick squelches (at least commercial radios) usually have the squelch gate hog-tied to the mute circuit. This is especially true in radios that have no u-processor.

There are usually ways around it but not being familiar with the circuit in the '3000 and can't offer you anything usefull right now.

Cheers

I'm looking for a reasonable price new or used AR-8000 hopefully in the Dallas, TX area. Does anyone know of any companies still selling this scanner? I was going to buy it three months ago but had to buy new tires for my car. Should have parked my car for a while and picked up the scanner while I had a chance. Damn FCC.

Jose

3568. AirNav - The Aircraft Tracking Software - Upgrade

Newsgroup: rec.radio.scanner
Date: 1997-06-05 00:00:00 UTC
From: Andre Brandao <l42303@alfa.ist.utl.pt>
Message-ID: <Pine.OSF.3.96.970605125818.1233A-100000@alfa.ist.utl.pt>
Source record: 195359

Dear Sir

The new version of the Aircraft Tracking Software for Windows
has already arrived.
This E-mail contains the following info:
-Program URL
-New Version Features

.....
For more detailed information and Demo Version Download visit
the program's homepage at

http://www.geocities.com/SiliconValley/Lakes/9420
.....
DON'T FORGET THAT REGISTERED USERS WILL RECEIVE FREELY THE UPGRADES
OF THEIR REGISTRATED VERSIONS.

New Version main features:

-Estimate waypoints feature (previews next enroute waypoints)
-Export to TXT feature (exports Airnav's log files to text so you
can show your friends your logs)
-Estimate ALL (estimates ALL slots waypoints and times with only one
click)
-Cross Dateline tracking (dataline crossing enabled: specially
for Australia and New Zealand Users)
-New Airport database
-Instataneously current flight coordinates and speed calculation
-Set System Date and Time within the program
-Registration via user Name, ID and registration number (for a quickly
registration of AirNav)
and more...

Thank you very much, Andre Brandao,

I am interested in using my computer to moniter frequencies with my scanner but I don'nt know what to look for. The scanner I am looking at is the Bearcat BC9000XLT but under the specifications it says NO under computer intterface. Could that scanner be upgrade to work with me computer if I bought it??? If not can you recommend a good one that would work with my computer?

I don't think that this properly answered the question.

If one understands how simple digital circuits work, understanding a PLL Synthesizer is pretty straightforward.

A PLL is not an "oscillator" on it's own at all - it requires an oscillator. In the case of a scanner/radio it is the "VCO" (voltage controlled oscillator) that generates the frequency of interest.

PLLs came about to reduce the number of crystals inside a radio - in short, to reduce the cost of radios.

Here's how it works......

You have a Reference Crystal Oscillator. For the sake of simplicity let's say that our's has a frequency of 640KHz (0.64MHz). This 640KHz signal from this crystal is Amplified, or limited, to create a Square Wave of 640KHz. Then this frequency is divided by 2 using conventional digital dividers/pulse counters. Now you have 320KHz. This divided signal is then divided by 2 again. Now you have 160KHz then again 80KHz, 40KHz, 20KHz 10KHz 5KHz.<--- this is going to be our Channel "Step".

The 5KHz signal is then pumped into the first input of a special amplifier that is called a "Phase Comparator".

Now, there is a circuit that is called the VCO (voltage controlled oscillator). The frequency at which the VCO oscillates is directly dependant upon the DC voltage that is applied to it. The circuit itself is VERY simple and usually consists of one or more Varactor (aka

Varicap) diodes and and inductor. The VCO requires no external power it is driven directly from the Phase comparator in the paragraph above.

The VCO circuit can be thought of having two outputs. The first output goes to the receiver (or transmitter) part of the radio to derive the reception frequency. The second is treated just like the Reference Crystal. It is limited and then divided back down to 5KHz. It is then pumped into the second input of the Phase Comparator. The Phase Comparator compares the two signals. We know that the Reference Frequency is not going to change so what the comparator does is it will vary it's output voltage (DC) depending upon the frequency of the VCO divided down. If the VCO is oscillating too high, the phase comparator will reduce it's output voltage. If the VCO is too low the phase comparator will increase it's voltage output.

When the output frequency has stabilized, the collective circuit PLL Synthesizer is described as being "Locked in".

In most PLL ICs the Reference Divider and the Frequency Divider are PROGRAMMABLE. That is to say, you can vary the number by which both the frequencies are divided. This allows you to use different channel Steps (5KHz, 10KHz, 12.5KHz, 25KHz, 30KHz, 50KHz, 100KHz etc.) and to derive any frequency you want.

There is one more component to this circuit and it is called the "Loop Filter". It is basically a smoothing filter to remove the digital noise from the output of the Phase Detector. The smoother the voltage from the Phase Detector the "cleaner" the signal from the VCO.

A PLL will NEVER have as clean an output signal as a crystal alone. It's not possible. Close approximations can be achieved at HF frequencies with DDS (Direct Digital Synthesis) though.

In most scanners and many other radios you will find a special power supply that powers only the Phase Detector in the PLL Circuit. Even if the scanner plugs into 12Vdc there will be a 20V or 30V point in the radio. This "higher voltage" allows a MUCH greater frequency coverage of the VCO and a much more versatile oscillator.

If any of this isn't clear please let me know and I'll explain it some more.

> Cheapo, funko, bunko receivers have just two mixers and two IF
> sections (dual conversion) whereas the better receivers have three
> (triple conversion).
